Not really. They're just changing with the times. The weather is a big factor
in any outdoor event.

>Has e-Bay killed hamfests?

Nope. But online commerce has had an effect, whether it be eBay or its clones,
reflectors, websites or newsgroups.

See what things are like when the weather's good.

There are many factors affecting hamfest attendance and hobby activities in
general, not just the 'net. Among the married-with-kids folks, time for things
like ham radio often comes in bits and pieces, not big chunks.

In the past, it was typical for dad to work while mom stayed at home, at least
while the kids were too young to leave alone. Roles in the family were fairly

well defined. Most people lived in neighborhoods where the kids did not have to be chauffered around much. And most people had no idea what CC&Rs were. Yes, there were exceptions, but they were just that - exceptions.

Today both parents work, usually by necessity or perceived necessity. In many professions, things change so fast that not working in that profession for several years makes that person almost unemployable without re-training.

End result is that the idea of taking spending lots of time and $$ to go to a distant hamfest is not an option for many folks. Particularly when it does not involve the entire family. Sure they'd like to go, but it's not high on the list compared to a bunch of other things.

Until a few years ago, I was a regular at almost every hamfest within 2 hours' drive. Even after I got a computer and found eBay, I would go. Bought, sold, built up quite a pile of goodies for almost nothing.

But hamfesting took a lot of time. Load up the car Saturday afternoon, get up before dawn to do the 'fest on Sunday. By the time I got home and put the new treasures away it was almost dinnertime. Plus there was always the risk of bad weather.

Along came the 'net, with reflectors, newsgroups and eBay. Including "WTB" messages and much higher prices. End result is a 24/7 hamfest with no weather worries, low entry fees and you set your own schedule. Sure it takes a bit of time to wrap the stuff up and ship it, but that can be done in small bits of time rather than large chunks.

73 de Jim, N2EY

73 de Jim, N2EY

. Particularly one that does not necessarily involve the entire family.

No, not now. We have to wait until the final order is out from the FCC.

Earlier I said I thought it was 90 days after the Federal Register reported it...that was wrong...it will only be >thirty< days after it appears in the FR that we can use the new assignments.

I've never seen Len claim that he shouldn't have to take ANY amateur radio
exam. Just the code test.

The point is that his claim that he took a "tougher" test is without basis
unless the tests can, in fact, be compared. Since he did not take any amateur
test, he is not qualified to compare them.

>>> What you are implying is that "tests" represent a summation of

No. We must wait until it becomes final. In this case, that means 30 days after this is published in the Federal Register (which hasn't happened yet - but should happen by the end of this month). Effectively, that will mean that it should be in effect by July 1, 2003 (if not earlier).

She gave it up for a while, but my 11 year old has picked up the licensing guide again. If I ask her real nicely she might let Lennie have some third-party time. But only if she's close enough to manipulate the transmitter if he should do something wrong.

>> It put Lennie on the spot. He had to answer a direct question with a

>Larry Roll for one.

Mike:

I don't object to 10-10 numbers per se, just to the behavior of hams who are particularly single-minded in their pursuit thereof. It is virtually impossible to have a QSO on 10-10 these days (at least in SSB mode) without being pestered for a 10-10 number. I extreme situations, such as the one I was exposed to over 10 years ago, 10-10 participants indulge themselves in giving a lengthy rebuke to people who don't have one, or, in my case, had one but subsequently forgot it. This experience put me off to phone operation in a way from which I have yet to recover.

>There are some hams who will chew another ham out

>don't have one.I've heard a public dressing-down or two. I'm not overly
>wild about it myself, as while the idea sounds okay, the implementation
>has become one of exclusivity. So that may have been what the one ham
>was talking to the other about.

Indeed, it is. The 10-10 crowd has pretty much outlived it's usefulness, AFAIC. Oddly enough, I'm starting to think pretty much along the same lines with regard to FISTS and their ever-expanding program of dubious "awards" which require stringent number-crunching on the part of hams who just want to have a CW QSO! I think one of these days I may just conveniently "forget" my FISTS number just to see what happens!

I hope nobody starts some kind of inane "awards program" for PSK-31 and the other digital modes!

Huh? Since when do you "center" a SSB signal? When you dial up 5332
and transmit a 2.8 khz-wide USB signal, it's proper for it to be 2.8 khz
wide
above 5332. If it conforms to the proper signal bandwidth, that's
proper. The operating frequency is still 5332 khz.

Except that they have given us 5332 kHz USB +/-1.4 kHz, so you need to be
on 5330.5 kHz. If you were on 5332 you'd be out of band.

Well, the rain Saturday made the flea market a bit of a waste. Outside venders got out the plastic to cover everything up, so you really couldn't see the outrageous prices they were asking for their junk.

The rain forced everyone inside. One character had chaser lights around his callsign badge and an antenna mounted on each shoulder. There were no fatsos on three-wheel carts, but I did see several that were top-heavy and looked like they were about to tip over.

I sat up in the stands of the main arena. This is always one of my favorite places to go at Dayton, just to watch people and get away from the crowds. Besides, with everyone inside because of the weather, I didn't want to get too close to them, since most don't know what a shower is. I noticed one guy that had two young boys with him. These kids looked like they were bored out of their mind, as their father (I assuming it was their father) looked at every piece of mundane junk that was to be found.

Oh well, better luck next year.

news:ba77kh02168@enews3.newsguy.com...
Well, the rain Saturday made the flea market a bit of a waste. Outside venders
got out the plastic to cover everything up, so you really couldn't see the outrageous prices they were asking for their junk.

The rain forced everyone inside. One character had chaser lights around his callsign badge and an antenna mounted on each shoulder. There were no fatsos on
three-wheel carts, but I did see several that were top-heavy and looked like they were about to tip over.

I sat up in the stands of the main arena. This is always one of my favorite places to go at Dayton, just to watch people and get away from the crowds. Besides, with everyone inside because of the weather, I didn't want to get too
close to them, since most don't know what a shower is. I noticed one guy that
had two young boys with him. These kids looked like they were bored out of their mind, as their father (I assuming it was their father) looked at every piece of mundane junk that was to be found.

Oh well, better luck next year.
.....
Funny thing, Dayton. Every Ham should go there at least once just for the experience. I used to laugh up my sleeve at the goofy guys that were built like a bowling pin...they'd have a three inch wide belt with four or five HT's attached to it...rubber duckies on their hard hats, battery packs hanging out of their back pockets and four inch wide plastic plackards with their callsigns engraved on them.
They have no shame.
Then there are the guys who push a friggin' shopping cart around...take up aisle space and mosey along as though they have all day. Nothing in the cart but a few flyers. Ever try to get close to the vendors? Want to look at the new Yeasus? Forget it...the old fuddie-duddies crowd around the vendor and linger for hours...knowing full well that they aren't going to buy a darn thing from the vendor!
Oh, and every now and then you happen upon an old geezer who has a flatulance problem...he farts through his Relys and has not the sense of smell to know that he is passing malodorous methane to the bystanders.
Ever try to get into the rest rooms at Dayton? Forget it! Pee outside if you can...

The funniest part of attending Dayton was, to me, a standout when I saw a goon with an aluminum helmet complete with a chin strap on which was mounted a small three element beam! This bird took the cake! What was he doing? Moon bounce? Beams in an auditorium?
No wonder people laugh...

To Dayton I say once is enough. Every Ham should go there at least one time. The laughs almost outweigh the hassles. Almost.

There's no way the current 5 wpm code test can be reasonably called a
demonstration of "proficiency". Basic skills, yes, but not proficiency.

To each his own. However, note that there hasn't been a CW sending test for about 20 years now. And there are probably far more CW keys in use by hams today than there are Kleinschmidts or paper-tape equipment.

>You like it, fine. Have fun. If I owned old teletype gear like I used to

Even if it's the second-most-popular mode in use by amateurs on the bands where such a test is required?

>Far better to take that ridiculously easy
>Technician test and double the size and difficulty of it.

Why?

How many hams today actually build their own rigs from scratch?

Why require lots of technical knowledge in areas if the use of that technical knowledge is not required? For example, if a ham is primarily interested in, say, QRP HF CW, why require that ham to learn lots of stuff about VHF/UHF, voice modes, repeaters, complex impedances, satellites, etc.?

>Putting time in
>studying electronics and procedure would be a far better indicator of
>somebody's seriousness about the hobby than CW testing.

Is the test supposed to be a measure of seriousness or a basic entry level test of qualifications? I think the latter, not the former.

Consider this analogy: Should everyone who wants a driver's license be required to learn how to drive stick-shift?

Call it whatever you want, the logic's the same. Just substitute
"basic skills" for both above.

An observation from a Dayton Local with over 30 years experience attending the Dayton Hamvention:

2 meters had very little outside the area radio traffic until Thursday PM - Extremely Unusual for Hamvention week
Did not see the usual large gathering of mobiles in the motel parking lots near where I work - Very unusual for Hamvention week
94 Talking-In station hecklers at a minimum - Just plain weird
94 Traffic slow every day Hamvention was open - Unusual
Little traffic 6 meter or 40 meter heard and 146.52 did not have any traffic until Saturday - Strange occurrence

Saturday I did talk with some out bound mobiles from the East and Midwest basically their complaints were
the rain and outrageous Shuttle service. They had to pay to wait for a 1 to 1-1/2 hour ride to Salem Mall and
back.

What was unusual about my conversations with these people was they took place at about 12 Noon. People were bailing out in
droves only after 4 hours after the Hamvention doors opened, this was a first in all my years of Hamventioning! One guy commented
the attendance was about of what he had seen in the past 10 years of attendance. I agree!

The Hamvention, as it is now called by the slick promoter DARA sold out to, is no longer the premier event it was 15 years ago. It
just like the Dayton Air and Trade Exposition, have been run into the ground for the almighty buck. Sure DARA had its problems running
the Hamvention during its tenure but, the original members made it a personal event not the commercial money making machine it is today.

One Ham on 6 meters commented, "The Hamvention like Ham radio itself has matured and is on its way to old age", he further explained
the changing technologies have drawn the younger generation to computers and the internet. Those that enter Ham Radio today are basically
an aging generation of people who when they were younger did not possess the knowledge or motivation to get a license until now. They
are dying off as fast as they enter Ham Radio hence an arrested grow rate compared to other hobbies.

I think the reason Krell did not see the addicted weirdo's always present during the last 30 years of the Hamvention, is they are passing away. Several I knew personally have died or mentally gone off the deep end from their indulgence in alcohol and drugs during the 60s and 70s.

The old organizers from DARA I knew when I was kid, are all with Barry Goldwater passing traffic in that great shack in the sky.

Hamvention has a terminal old age disease and will pass on to that great shack in the sky within the next 10 years!

73, to all those who put on great Dayton Hamvention in the past .*** -*-

PS: This is no longer the Dayton Hamvention, the new promoters along with their cronies in Trotwood call it The Hamvention
(now a registered trademark). So the Dayton Hamvention in reality has been dead for several.

And most of those keys are a far cry from Mr. Morse's original, as
is the modern equipment used in digital modes.

Well yes, obviously. CW operations aren't going to carry amateur
radio into the 21st century.

>
> >Far better to take that ridiculously easy
> >Technician test and double the size and difficulty of it.
>
> Why?

Because it's too short and too easy? Judging by some of the
questions that get asked by licensed operators in the r.r.a* hierarchy, the
basics aren't sinking in.

> How many hams today actually build their own rigs from scratch?

I'm not advocating going that far; I'm really not even advocating
changing the testing, not much. I'm just asking, if you're OK with the code
requirement, why don't you have a problem with the new tests? (Or do you? I
don't know.)

> Why require lots of technical knowledge in areas if the use of that
technical
> knowledge is not required?

Isn't increasing the pool of skilled technicians one of the purposes
of the amateur service?

>For example, if a ham is primarily interested in,
> say, QRP HF CW, why require that ham to learn lots of stuff about VHF/UHF,
> voice modes, repeaters, complex impedances, satellites, etc.?

Err, that's more operator material than the tech I'm thinking of.
I'm talking about pushing electrons through wires and components, having a
fundamental grasp of the metric system, etc. Very basic stuff.

> >Putting time in
> >studying electronics and procedure would be a far better indicator of

Well, that's sure not the impression one gets reading these
newsgroups - the most common argument put forward (in my experience) is that
it demonstrates the testee's motivations.

> Consider this analogy: Should everyone who wants a driver's license be
required
> to learn how to drive stick-shift?

But we'd still require people to learn CW, even if they have no
intention of driving a stick...err, operating CW.
I guess I should be thoroughly cowed by that logic, but it somehow
fails to impress me.

I see the suitecase FM station gentleman has his self-contained FM broadcast stations for sale at Dayton. He's been making the rounds of hamfests in the Southeast but appears to be enlarging his territory for the last year. He and his lovely assistant had the real low power stuff on display out front and the larger higher powered stuff was sort of off to the side and back. When we got back to the hotel, I fired up my receiving gear and deteced what apparently was several people testing their newly purchased low power unlicensed FM broadcasting set ups. I can easily see these easy-on-the-air set ups starting to proliferate in every town and city. One guy was telling me his listening audience has grown by quantum leaps each week.

Good point ...what will carry amateur radio into the 21st century???
Perhaps it is something that isn't even on the horizon as yet. The present
modes are the only useful yardsticks we have. CW won't carry us into the
21st but neither will digital or phone exclusively .... we are not defined
by one mode nor should we be. It is however a shame how a useful elegant
mode can be "badmouthed" by a sector of ops or hopeful ops who have never
even tried. To those who have tried and have had their ritual backyard key
burial ...more power to you. Enjoy what ever mode this service offers. It
is a greater shame what our government did by eliminating the novice class.
I always felt that 5 WPM should have been the entry for ALL the CW subbands.
This would have assured growth for the mode but more importantly for the
service.

Is ham radio CW ???? ....dare I say that ham radio is electronics ????? I think that this is where we as a group generally fall into the trap of turf be it CW or Phone or digital or contests or DX or building or QRP or antennas or public service etc ....It is none of these things exclusively but the sum total. Should we hit the "unwashed" newcomer with a technical test that will challange a 1st year EE student. Yes why not ...give it to em ... make him worthy to put his rig on the air and kill ham radio as sure as increasing the CW test to 35 WPM. There is a real sense of elitism that I see from some hams regarding the next fellows "electronic savy". I look at the service and ticket as an entry to learn and grow.

> Well, that's sure not the impression one gets reading these
> newsgroups - the most common argument put forward (in my experience) is that
> it demonstrates the testee's motivation ..

No not really but it is a part of the situation .... The class that I am in charge of for our club has had roughly 50 percent going on into a higher class with the CW upgrade.
> > Consider this analogy: Should everyone who wants a driver's license be
> required
> > to learn how to drive stick-shift ..... snip

Here we go again with the old stick shift analogy ..... I am officially adding this to the "CW always gets through" crap bucket. I can't beat the feel of taking my Miata around a curve with a nice shift and letting the backside just come through .... I'd be laying in ditch if I tried that with my Sante Fe.

Take care fellows and ladies ...

God Bless ....Tom Popovic KI3R Port Vue Pa nr Pittsburgh

You sure do enjoy the miseries you latch onto, don't you? You're bringing
up an event from over 10 years ago, reacting to it as though it happened
just yesterday, and rolling all 10-10 up into it. And, why is that you
don't enjoy a lengthy rebuke from someone about something when that is all
you have to offer--a majority of the time--here in this newsgroup?

From other posts I've seen from you along the lines of ham radio phone
conversations, I'm beginning to think more and more, Larry, that you must
carry the same personality into your personal/social life as you do here.
Consequently, I could certainly understand any reticence to be civil to you.
You aren't civil to others.

I think if you check into the history of hamming, a major part of the hobby side of it is, indeed, paper chasing. And, there's nothing wrong with it. Aren't you one the cluck-mouths I've seen about "majority rule"? If the majority of hamming is paper chasing, contesting, awards, etc., then sobeit. And, if you want to change it, then you'll have to start somewhere. A lecture from your own mouth to others, many times. So, lead by example, Larry. Get busy!

I agree, but you've got a situation where _this_ is happening, and
is fact codified as law by the CW requirement.

> It is however a shame how a useful elegant
> mode can be "badmouthed" by a sector of ops or hopeful ops who have never
> even tried.

In my spotty lurking, I've seen far more slandering of no-code techs
than I've seen of CW-bashing as a mode. The difference here is that the
argument _usually_ goes along the sequence: "Requiring CW is stupid." and
the reply is bunch of personal attacks about lazy, stupid no-code techs.

> To those who have tried and have had their ritual backyard key
> burial ...more power to you. Enjoy what ever mode this service offers. It
> is a greater shame what our government did by eliminating the novice
class.
> I always felt that 5 WPM should have been the entry for ALL the CW
subbands.

From what I've read, even the survival of a mode shouldn't be on
"our" radar, but keeping what spectrum we've got.

My argument was put forth as an _option_, not a position. While I _believe_ the Tech test is both too easy and/or imbalanced, I presented this option as a better alternative to code testing. After all, all radios, regardless of spectrum use or mode, obey the laws of physics.

But how many more would have been motivated to learn a little bit more and upgrade if they _didn't_ have to waste their time studying code? (I say "waste" because it's a safe bet that they're not interested in it - if they _were_, why, they'd be in the group that studied it, no?)

shrug it was offered by a pro-coder, actually. It's valid enough reasoning, though. When conditions are bad, good operators _can_ get through with CW. You get a good feeling driving your Miata. My reply to either point is a loud, obnoxious "So what?" "Packet Radio may very well enhance the survivability of digital communications and the internet in the event of catastrophe." Hurray, and "So what?" Should everybody be required to be able to set up a node? Hardly, no more than they should be required to fiddle about with CW.
You can require CW until the end of time, but if nobody's interested, it's irrelevant how grand it is, or how reliable it is, or anything else. Heck, you'd probably get more licensees working this question backwards. Let 'em get on HF and maybe _that'll_ give 'em the CW bug.

>You sure do enjoy the miseries you latch onto, don't you?

Don't look now, Kim, but I don't -- which is why I am writing in opposition
to the conditions which have brought them about.

>You're bringing
>up an event from over 10 years ago, reacting to it as though it happened
>just yesterday, and rolling all 10-10 up into it.

Human memory is long, Kim, and people tend not to forget significant
events in their lives that have had the effect of shaping their opinions.

>And, why is that you
>don't enjoy a lengthy rebuke from someone about something when that is all
>you have to offer--a majority of the time--here in this newsgroup?

Don't look now, Kim, but you have, in effect, answered your own question.
Nobody enjoys "lengthy rebukes," and I'm no different than anyone else.
Perhaps if my opinion and attitude toward SSB operation, and the 10-10

operation in particular, hadn't been shaped by such a "lengthy rebuke," then we wouldn't be having this discussion today.

>From other posts I've seen from you along the lines of ham radio phone
>conversations, I'm beginning to think more and more, Larry, that you must
>carry the same personality into your personal/social life as you do here.

How would you know that, Kim, if you have never conversed with me live and in person? The truth is, you can't -- but it is convenient for you to make specious assumptions about my personality when they serve your own agenda.

>Consequently, I could certainly understand any reticence to be civil to you.
>You aren't civil to others.

If it were true that I am not civil to others (which it is not), then you would merely be being disingenuous by not being civil to me. And you haven't been civil to me in a VERY long time, Kim! You can't use someone else's alleged "incivility" as an excuse for your own.

>> Indeed, it is. The 10-10 crowd has pretty much outlived it's usefulness,

>>
>
>I think if you check into the history of hamming, a major part of the hobby
>side of it is, indeed, paper chasing.

A "major part" would be something like 20-percent. The 10-10 organization and FISTS have turned 10-meter SSB and most CW operation into a situation where "paper chasing" defines the operational imperative. Just getting on the air to enjoy a leisurely QSO is seemingly impossible these days -- except on the digital modes.

I participate in a few major contests each year, namely Field Day, the November Sweepstakes, and the Ten-Meter contest. I enjoy *occasional* competitive operation. However, I'm not interested in a steady diet of it. Unfortunately, organizations like 10-10 and FISTS are shoving this particular "diet" down my throat.

>And, there's nothing wrong with it.

I didn't say that there was something "wrong" with paper-chasing, Kim -- just that it should be an *optional* activity, not the widespread paradigm.

>Aren't you one the cluck-mouths I've seen about "majority rule"? If the
>majority of hamming is paper chasing, contesting, awards, etc., then sobeit.

Quite the contrary, Kim -- I definitely believe in the tyranny of the majority.

>And, if you want to change it, then you'll have to start somewhere. A
>lecture from your own mouth to others, many times. So, lead by example,
>Larry. Get busy!

Kim, I'm not the only one who objects to the proliferation of contests and
awards programs in amateur radio. You obviously don't read the Correspondence
column of QST magazine very often.

>> I hope nobody starts some kind of inane "awards program" for PSK-31
>> and the other digital modes!
>>
>> 73 de Larry, K3LT
>
>Gosh, I'd be real surprised if it isn't already happening!

It very well could be. I'm presently coming out of my annual "operating
slump,"
which is usually brought on by my annual bout of allergies and bronchitis and
usually ends with Field Day. I haven't been on-the-air in ANY mode in over 3
months! Someone could have invented the PSK-31 Paper Chasers Club by now,
and I wouldn't know it! If they did, I'm not applying for a number!

Looks like the "technical staff" at FCC have gone braindead, again. They
assign a frequency which puts you out of band when you dial it up. Right.
So now the frequency assigned is not the frequency you use.
It's stupid.
Look for scads of hams to fall to that little quirk of ignorance on FCC's
part.

So, do you guys have any reply to the _argument_, or are you just
going to split hairs over definitions?
You can call the requirement any skill level you like, I don't care.
Here, maybe you can wrap your brains around this:

"Requiring somebody to acquire incredibly low, rudimentary, most basic,
the least possible, familiarity and ability to manipulate a Kleinschmidt
teletype makes absolutely the same amount of sense as requiring them to
acquire incredibly low, rudimentary, most basic, the least possible,
familiarity and ability to copy CW."

Split away.

I don't operate much SSB or 10 meters these days, but I do operate quite a bit of conversational-QSO CW, mostly 80, 40 and 20 meters. I have not experienced ANY pressure towards "paper chasing". Sometimes a fellow FISTS member will give his/her number and ask for mine. Which I do without any fuss. Takes us less than a minute, numbers are logged and we go on with the QSO. Lots of great friendly chats.

>I participate in a few major contests each year, namely Field Day, the

The suitcase low power FM stuff is VERY
POPULAR with people involved in the Militia
and the Patriot political movements. Many of them
set up these things in their trailer park or other
homes using an external antenna, then re-broadcast
"patriot" type programming from WWCR, WWFV
and other right-wing shortwave radio stations.
They feel doing this this is their 'duty' to 'inform' the
public about such things as chemtrails, bilderbergers,
planet-x and other such "conspiracy-kook" paranoid
bullshi+. It's a shame really, as if they'd put as much
effort into bettering their own lives as they do in
cross-pollenating the crazy BS on shortwave, they'd likely
have a much better existence than the one they
now have. Been watching these sad souls for years
and every one of em are either crazy, flat-broke or
lazy po-buckers, or a bit of all three. Alot of em goto
Dayton and other hamfests each year to buy up old
radio gear. Easy to spot em. Usually wearing old green
army jackets or goofy-message tee shirts and are almost always
missing several teeth. Smell like they could use a bath also.
Put 6 of em together and I bet they'd be hard pressed
to come up with $200 between em. They blame all their problems
on the "New World Order" or whatever Alex Jones says
is causing them their hurt, instead of lookin at the real problem
in their bathroom mirror in the morning. (should be real
fun when the FCC clamps down on these microbroadcasting
militialoons, alot like a re-hash of when they got Col Steve!)

Maybe for him, WEIGHT is more of an issue than waiting! :-)

--
Radio amateur = ham.
Ham comes from pigs. Pigs are fat.
Many amateur operators are fat.
Coincidence?

You be the judge! :-)

We'll find out either when:
1) The FCC decides to issue a clarification, or
2) Riley starts handing out pink tickets.

This is another perfect example of why certain things should be left to the
technical staff and out of the hands of politicians.

Well, QST will just have to tell us, along with the announcement of
our new secondary allocation (and when we get to use 'em) the
numbers we need to dial up on our rigs to get us where we need to
be. Seems that different radio services specify carrier frequencies
differently....

When time comes, I'll just program the 5 frequencies into my
rig's memory (like #51 for 5MHz band channel 1, #52 for 5
MHz band channel 2, etc.) and browse via memory mode
when I want to surf that band. My rig also stores what mode
(USB) goes with those frequencies.

Or 3) hams educate each other about the strange way the frequencies
were expressed by the FCC on this band, and what we really need
to dial up on our rigs to be in the rules. We can handle it....

QST, packet radio, and the Internet will take care of it, and word of
mouth should take care of it.

Sounds like most of our transceivers, coupled with somewhat lossy
coax and antennas cut for 40 and 80, should comply with this
power level restriction.

What about beams? Can I concentrate my effective radiated
power in one direction, or do the rules consider that to be
exceeding the max effective radiated power in that direction?
Like looking like 500W in that direction and 1 watt in all other
directions? As if I took the 50W that was spread all over
all directions and concentrated it in a narrow beam direction.
Or maybe I can only use a QRP rig with that beam?

Actually not, Kim. The 10-10 business sounds pretty good in theory. It is just that some people get over zealous and cranky about the whole business.

NO one deserves a public dressing down over the air. If a reg is being violated, a polite reminder is in order. If it continues, a recording to Hollingsworth is next. A 10-10 number is a voluntary and not all that important thing.

Depends on whether your rig reads "assigned frequency" which
is the center of the occupied bandwidth or the frequency of the
suppressed carrier which (theoretically) is the lower edge of
the occupied bandwidth.

Wrong. The FCC Rules (Sect. 2.1 - based on the International
Radio Regulations) define the "assigned frequency" as the
center of the occupied bandwidth, not the suppressed carrier.
If your rig reads the suppressed carrier frequency, -you- have
the make the mental adjustment to keep the center of the
occupied bandwidth where the FCC tells you to.

>So now the frequency assigned is not the frequency you use.

The frequency you "use" is whatever your rig reads to put the
center of the occupied bandwidth where the FCC tells you to.

> It's stupid.

Not at all. It's the convention followed by the commercial
services all over the world. It's your rig that may be lying
to you.

> Look for scads of hams to fall to that little quirk of ignorance on FCC's

Look for scads of hams to fall to that little quirk of
ignorance on THEIR part.

The Rules are specific on what "assigned frequency" means.

I do believe that this was handled by the technical staff in
the International Bureau (the bureau that is the liaison with
NTIA) as well as by Bill Cross (who is an active ham) in the
Wireless Telecomm Bureau (the bureau that handles rulemaking in
the Amateur Radio Service).

The politicians in the FCC are too busy conglomerating
broadcast ownership, fostering wireline competition, auctioning
off gobs of spectrum to "wireless" carriers, and figuring how fast
they can put the internet on power line carriers to deal with any
Amateur Radio rulemaking.

Reread the announcement; "effective radiated power". It is putting
the antenna into the picture, rather than specifying output power
or even input power. If you're antenna supplies gain (and due
to frequency relatively few have the space to put up some sort
of gain antenna at that frequency), then you'll have to reduce
power so the "effective radiated power" is still 50watts.

Reminds me of an article in 73 thirty years ago. Someone
describes an antenna with tremendous gain, despite being omnidirectional
and not looking any different than a 1/4 wave whip. The fine print,
of course, was using an antenna in the trunk of the car as the
reference antenna, so the whip put out a lot more power compared to it.
A ridiculous situation, but it does point out that gain and ERP
mean nothing without the reference being stated.

The quote does specify, over a 1/2 wave dipole, so if you're using
that you can't be outputing more than 50watts. If you've got
an antenna that actually provides gain over a dipole, then
you will have to reduce power further.

All our rigs read nominal carrier frequency. Any textbook will tell you
that SSB frequency is normally reckoned as the nominal carrier frequency.
'Assigned frequency' is a miltary term, as per the primary users.

Looks like new VEC questions for the general and extra pools will be
like:

On the 60m amateur allocation of "5332 KHz", and if your
rig displays the frequency of the suppressed carrier, you need to
set the rig to:
a) 5332
b)5330.5
c)5333.5
d)5334

And:

When you're transmitting on a 60m ham allocation freq with a dipole
antenna fed by a length of coax with loss of 3dB, the rig's power
should not exceed:

a)50W
b)100W
c)70W
d)30W

I don't like to throw cold water on the party, but I don't see much benefit in

the new 60 meter allocation beyond having a few channels available for emergency use - and after all, that was *the* justification for asking for the assignment in the first place. Looks like we got the bare minimum we asked for. I hope time will see a serious improvement in the dimensions of the allocation, but one is left wondering about the short term....

There are plenty of potential problems with with "channelization" on HF ham bands, especially where frequency tolerance and specific maximum voice bandwidths are mandated. A great many older ham rigs, including PLL and other frequency synthesized units, have drifted far enough to very likely be out of tolerance For that matter, many fresh from the factory have in the past been

poorly adjusted. I know, no tolerance has yet been published, but it's certain that if discrete frequency channels are specified, a tolerance will also be. In a frequency band that is never a problem, one station or group of stations merely "zero beats" or tunes in the net control or other station, and everyone is talking on the same frequency-whatever each individual transmitter frequency readout shows. With frequency readout accuracy critical to compliance with the rules, a totally new situation arises. Whose rig if correct?
Yes, one can check it against WWV, but with measurement methods available to most hams, is that going to be good enough? And what if it "seems to be off"? Will most hams be able to adjust it accurately? Or even determine if it needs adjusting? Send it to the factory for their opinion? What?

And who knows just how close the tolerance on his SSB crystal filter might be? Are you *sure* you will be only 2.8 khz wide at the max? Really sure, now? It's well known that crystals almost always drift a bit with aging.
A typical filter contains several crystals. How do you know where yours cuts off? Can you check it to be sure?

For that matter, channelization on ham radio is a new precedent, as far as I know. Yes, "channels" have long been used on VHF, but they have always been within authorized bands, and violating a frequency tolerance was never an issue. At HF it's a new concept entirely, within ham radio. I can forsee a lot of outgoing mail from OO's and probably FCC also.

So..... I think I'll just hide and watch to see what happens. If I need to get on 60 meters for an emergency, I'll do so. Otherwise, I'm gonna sit it out until the situation stabilizes a bit - and the situation would seem to call for a bit of stabilization, fer sure. I think I'll spend some time just watching the show.

Dick

"Technical Staff at FCC" is a standing joke on the professional
side of the industry. FCC has not had anything resembling a
"technical" staff for years. Bureaucratic bumbling and incompetence
more accurately describe today's FCC staff.

Oh, I don't know, there are mini-beams for 7 MHz, and there is a firm in Scotland (Antron, or something like that? - there are two firms with similar names) that make a 1/3 size beam for 40, as opposed to the Cushcraft, which is 2/3 size. I'm sure they could make a 60m version. Or maybe you could build a Maltese quad for 60? On first blush, some might be put off by 1/3 size giving you negative gain, but don't forget it would have a F/B ratio greater than 0 dB, and a somewhat lower radiation angle than a dipole as well, plus it would be in the clear (trees are very lossy), so I think in practice it wouldn't look that way. Not worth putting up a mini-beam for 5 chanels, though.

Yup, you got that one half correct. Today's FCC is populated
with politicians, but they have only one main mission, and that is
job protection, at all costs. Anything else is unimportant, unless
it affects job protection.

1189. Thoughts on Dayton

Newsgroup: rec.radio.amateur.policy
Date: 2003-05-19 19:06:08 UTC
From: Mike Coslo <mjc5@psu.edu>
Message-ID: <3EC92B20.80804@psu.edu>
Source record: 67239

I had a blast at Dayton, and thought I'd share some thoughts on it.

I showed up Friday morning, and after registering, hit the flea market. I was surprised at how big it was. Friday morning was also quite busy outside. I think most people saw the weekend forecast and decided that Friday was the day.

I was looking for a linear amp, and found quite a few for sale. Lots of Heathkit SB-200 family amps there. After a round of the grounds, I found a SB200 that needed some TLC. The paint on the case was bad, but the face was only dirty. The previous owner had apparently been a smoker, but I could take care of that. I got a good deal.

I didn't want to lug that thing around, so I went out to the bus. What this leads up to is "Take the bus!" I am amazed at how much better the bus is compared to the parking lot at Hara's. Just a couple hundred foot walk to the bus, then a couple more hundred to my van, and a lot of steps saved. And 2 dollars versus 8 dollars a day leaves me with money to spend on better things than parking. Also the parking lot was a muddy mess due to all the rain. So Then I hop back on the bus to go back up to Hara's.

Saturday was wet. Since it was forecast to rain, I planned on Saturday as an inside day. I got lots of goodies from the commercial vendors then. The rain slacked off, and I went back outside to try a deal on a KW tuner I was eyeing to go along with the new amp. Guy wouldn't budge on the price, so he got to keep it.

Sunday was just a hang-out day, and to see if any flea market bargains cropped up.

Now for the thoughts on the trip. I find it amusing that some hams here and elsewhere gripe about the obese, bizarre, and smelly hams that some obsess over. There were a few there to be sure. But not all that many. So in fairness to the gripers, I saw:

The dude with the miniature tower and three element beam on a hard hat.

The "Jungle Jim" guy who was wearing a pith helmet, a flowery shirt that looked more like it was designed for his wife, and didn't change nor shower all weekend.

A few amazingly obese guys.

A few amazingly old guys.

BUT! They were very much the exception. As my first Dayton Hamvention, I was keeping an eye out for the attendees, and found that in addition

to these characters I pointed out, that there were:

Quite a few young hams in attendance. Many brought their young lady friends.

Female hams. The percentage was about what I expected. Not high, but still there. This has been my experience in most technical fields, which seem to have trouble attracting women. But the ones who were there were happy enough to be there.

Normal looking hams with their normal looking families.

There were a fair amount of attractive ladies there. Not only the ladies in the booths, but also walking about in the crowd.

African American Hams. I didn't keep a count, but there ware a significant number.

All in all, I'd say that it looked like a normal cross-section of people.

The guys with the weird hats were no different than the people who go to football games and wear cheese wedge hats, or paint their chests in team colors. In fact they are less goofy IMO.

And I don't favor picking on the obese.

Soooo, the only person I took real exception was the smelly guy. Everyone can take a shower once in a while.

Final score: Regular people I saw: 10's of thousands

People who really need to clean up their act: 1

Personally, I think that when people gripe and complain about the obese, smelly, old, nerdy, weird, all male, all white, antisocial hams, they are saying a lot more about themselves than they say about those they denigrate.

1. Why would a person ONLY do that? Are you making a strawman? A
hypothetical Ham who doesn't do anything else but contest? then
mysteriously disappears and does nothing else until the next contest?

When I'm not contesting I'm usually getting plenty of physical activity.

2. I lose weight over field day. The calories used setting up,
operating all night, and then tearing down and storing all the field day
equipment use up huge numbers of calories. I'm more beat after field day
than I am in a three hockey game week.

> Furthermore, these activities lead to "celebrating" afterwards with food.

Nope. It means that less people are going to walk around in a cold rain.

> Has e-Bay killed hamfests?

I doubt it. There is probably some effect though. But just wait. I suspect that as internet fraud suffers a crackdown, this all may change. At some point, Ebay will probably share some culpability in what happens there. And auction fraud is the number one internet complaint to the FTC.

> I recall Dayton as being so packed in past years

You base your conclusion on insufficient evidence. A webcam in the rain is not much of an indicator.

Zero beating against WWV should be more than good enough. Use
the 5MHz WWV station, and if you find that your rig is off a bit, just
note the error, and "mis-tune" yourself by the same error to null it
out when operating these new allocations. This if your rig's manual
doesn't describe how to adjust the rig to fix the error. Page 24 of
my TS440SAT's manual tells how.

> And what if it "seems to be off"?

Not so far as to be a problem here.

>
> A typical filter contains several crystals. How do you know where yours cuts
> off? Can you check it to be sure?

We could check it on another band, and have someone several miles away
(with the attenuator switched in on his receiver) check above and below
the "channel" you're on. Most all rigs use an intermediate frequency for
the SSB modulator and heterodyne that to the frequency you want to transmit
on. So using another band to check it works fine for this.

Besides, crystals are pretty reliable. How often do you find bad SSB
other than those someone deliberately messed with on the air?
And those are likely due to misadjusted linears.

The rigs the other users of 5Mhz use are likely to be quite similar to
modern ham rigs except for how the user selects the channel. And that

is just a microprocessor fetching a number from memory and loading the PLLs with it. My TS440SAT can be placed into such a mode with the "VFO/M" front panel key. So the big knob selects channels instead of incrementing or decrementing the frequency. It's all firmware differences here, the rest of the rig can be otherwise identical. The point here is that a modern ham rig should perform just as well as the rigs used by the other services around 5MHz.

There were many amps, but they were all for CB. Very few
ham amps, and as expected, the sellers had wild ideas of what
they were worth.

The same three or four ugly oinkers you see at every hamfest.

>
> Normal looking hams with their normal looking families.

You have a strange idea as to what "normal" is!
Families? Saw a few guys dragging their filthy little screaming
kids around. That was it. Probably because their old lady
had to work that weekend.

>
> There were a fair amount of attractive ladies there. Not only the
> ladies in the booths, but also walking about in the crowd.

Attractive!!!!????? Whew!!! You DO need to get your
eyes examined, pronto!

>
>
> African American Hams. I didn't keep a count, but there ware a
> significant number.

Idiot! The few blacks you saw were employees on the custodial
staff! I didn't see a single black ham. Dayton is a white thang,
doncha know?

>
> All in all, I'd say that it looked like a normal cross-section of people.

Like I said, get to an eye doctor ASAP!

>
> The guys with the weird hats were no different than the people who go

No, what they are doing is sharing a lesson learned the hard way.
Don't waste your money on Dayton, unless you are a psychology
student doing a class project or better yet you get paid to be there.

Calling a rule "stupid" is one usual defense when one
finds it inconvenient to comply with it. I didn't think that
you were in that category, Dick.

One should not blame "the rule" for one's deficiency in making
the computation as to where to set a particular rig to be where
the rule tells you to be.

The rule is clear - the "numbers" represent the center of the
channel, just like 146.90 MHz represents the center of THAT
channel.

APOLOGIST? HA!!

Mister Anonymous Big Al, I'm one of the loudest critics of the FCC..... read some of the diatribes that I post from time to time. The one that you replied to in another posting was a very mild gentlemanly expression of my views. Is the agency screwed up? You bet your bottom. We can thank Charlie Ferris and his successors for that. Is it what we have to work with unless we get it changed somehow? Ditto. What I won't buy into is anonymous widespread generalities with no basis in specifics or fact.

I earn my snack money keeping current on the Rules and the case law (amateur radio is a small sliver of what I handle) and advising clients what the FCC Rules require and how to get where they want to go without violating them. That's something that I'm good at and enjoy both personally and professionally.

It's a lot easier and cheaper for the client to do it that way than to have to mount a defense in administrative litigation and hearings.

I'm sorry that your rig does not have a panel or automatic
switch to change the displayed readout frequency from "suppressed
carrier" to "center of occupied bandwidth" if you can't make
the computation in your head.

Get a copy of Part 2 of the FCC Rules and READ the definition
of "assigned frequency" in Section 2.1 of the Rules. This
applies to the Amateur Radio Service as well as other FCC Radio
Services. This is the standard method of specifying discrete
channels for regulatory purposes.

> There are plenty of potential problems with with
"channelization" on HF ham bands, especially where frequency
tolerance and specific maximum voice bandwidths are mandated.

Other than in the Amateur Radio Service, HF comms have been
channelized for decades. Remember that we are secondary in
the 60-m allocation. so we get to play by the "house rules"
in that regard.

>A great many older ham rigs, including PLL and other frequency
>synthesized units, have drifted far enough to very likely be out
>of tolerance For that matter, many fresh from the factory have
>in the past been poorly adjusted. I know, no tolerance has yet

>correct?

Interpretation of Sections 97.101(a) and 97.103(a) of the Rules
puts the burden on the station operator and licensee to ensure
that their operation complies with FCC Rules.

Look at it this way - the FCC gave us five "mini-bands" to
operate in.

>Yes, one can check it against WWV, but with measurement methods
>available to most hams, is that going to be good enough? And what
>if it "seems to be off"? Will most hams be able to adjust it
>accurately? Or even determine if it needs adjusting? Send it to
>the factory for their opinion? What?

Is the sound that I hear that of kicking or screaming?

> And who knows just how close the tolerance on his SSB crystal
>filter might be? Are you *sure* you will be only 2.8 khz wide at

>the max? Really sure, now? It's well known that crystals almost
>always drift a bit with aging. A typical filter contains several
>crystals. How do you know where yours cuts off? Can you check it
>to be sure?

Hint -- the simple way is to either unsuppress the carrier
or inject a single tone of known frequency. Measure the output
(single rf frequency) of the rig (into a dummy load, of course).

This will tell you what "dial offset" to use. Simple, eh what?

If you can't rely on "reading the dial", get a good frequency
counter. Even a "cheapie" 0.1 ppm counter will get you within
5 Hz at 5 MHz.

> For that matter, channelization on ham radio is a new
>precedent, as far as I know. Yes, "channels" have long been used

Amateur Radio Newsline™ Report 1344 – May 16, 2003

The following is a closed circuit advisory. Amateur Radio Newsline report number 1344 will follow.

Ladies and gentlemen, Amateur Radio Newsline's support fund administrator, Andy Jarema, N6TCQ.

--

I want to begin by saying thank-you to all of those who have contributed so far to keeping these Amateur Radio Newsline reports coming your way. As I said a few weeks ago, to continue bringing you the news and to continue to honor the accomplishments of youthful radio amateurs with the Young Ham of the Year Award, we have to raise about $1000 a month. I am happy to tell you that thanks to your generosity, we are now about 20% of the way to that goal. That's the good news. The bad is that we still have 80% of the way to go and the bills keep coming in.

I know that I have said this before but I have to again. The bottom line is that you, and only you keep all of this going. Its your tax deductible contributions that pay the cost of producing and distributing Amateur Radio Newsline bulletins. Its your generosity that makes possible the honor bestowed on a young ham operator every August.

Without any doubt, you are the most important part of the Amateur Radio Newsline family because it is you who tell us through your contributions that you want us to continue. And for that we are eternally grateful.

Remember, Amateur Radio Newsline is a federal 501 c 3, not for profit corporation, and, as I said earlier, your contributions are tax deductible. Our address is the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Thank you for taking the time to listen. Newscast number 1344 follows immediately.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1344 with a release date of Thursday, May 15th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. The tornadoes of May continue as ham radio lends a hand and the doors open at Hamvention 2003. Find out the details on Amateur Radio Newsline report number 1344 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: THE TORNADOES OF MAY CONTINUE

According to statics, May 4th through the 10th, 2003 was the most active week of tornadoes on record. This, as scores of twisters ripped across the nation's midsection, reducing hundreds of homes and businesses to splinters. We have more on the storms and the part ham radio played in the aftermath in this report.

--

It was a busy week for ARES and RACES volunteers across the nations mid-section. Nearly 300 tornadoes have been reported since the beginning of May. That’s nearly 100 more than the most recent comparable outbreak in 1999. And so far, May 4th to the 10th has been the most volatile time of all.

Tornadoes have been everywhere from Oklahoma and Kansas to the West and to Alabama and Tennessee here on the south. And ham radio operators have been on the job as severe weather spotters looking for approaching storms. They have also been part of the clean-up effort after they have hit.

Among the groups using ham radio is the Salvation Army. Its website says that nine emergency disaster vehicles were set up in Kansas and Western Missouri following twisters that hit there. Its communications arm -- the Salvation Army Team Emergency Radio Network was dispatched to each location to assist using Amateur Radio channels.

One twister that struck the Oklahoma City area late Friday the 9th approached the metropolitan area from the southwest, then skipped through the city. This storm snapped utility poles, flipped a light airplane parked at a local airport and ripped apart an elementary school. It also knocked out a lot of telephone communications bringing out emergency trained ham radio operators to fill in.

Not long after this tornado hit, the Federal Communications Commission declared a general communications emergency for the Oklahoma area. United States Amateurs were told that they could not use 3 point 900 MHz, plus or minus 3 kHz, unless they were handling emergency traffic. The FCC said the declaration was in support of ham radio communications by the Salvation Army's tornado relief efforts. The ban was in force for about 24 hours, terminating at 22:30 on Saturday May 10th.

And on Saturday, May 10th, the weather service posted more tornado warnings for parts of Indiana, Missouri and Illinois. And the Storm Prediction Center said severe thunderstorms were likely from eastern Oklahoma to western Ohio. In northeastern Kentucky, at least 17 people were treated at hospitals and more than two dozen homes were damaged Saturday night after a tornado hit in Lewis and Mason counties near Maysville. This put already weary ham radio communicators back on alert once again. Adding to the misery, torrential downpours flooded streets and fields in Indiana put hams there on call as well.

But it was not over yet. Storms with wind speeds of up to 150 mph hit parts of Central Kentucky early Sunday the 11th. Homes were damaged in Hardin, Hart and Mercer counties. Retired ARRL President George Wilson, W4OYI, who lives in

Owensboro Kentucky says that there were two siren alerts indicating severe weather was on its way. He says that local hams involved in storm spotting duties geared up under the leadership of Emergency Coordinator Jake Jennings, KG4EMO. Thankfully, no twisters actually hit but one was spotted around midnight causing one of the alarms.

Severe weather alert systems and ham radio operators involved in ARES and RACES may be in for quite a work out in the days to come. This is because meteoreologists say that the 2003 tornado season is really just beginning.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW, in New Orleans.

--

President Bush has cleared the way for federal aid by issuing a disaster declaration for ravaged areas of Tennessee, Kansas, and Missouri Oklahoma. The tornadoes combined with straight-line wind, lightning and floods to caused 44 deaths from Kansas to Georgia. (ARNewsline™)

**

HAMVENTION 2003®: HAMVENTION WANTS TO STAY AT HARA!

The 2003 Dayton Hamvention is on and the big news is that it wants to stay where it is. Amateur Radio Newsline’s producer Bill Pasternak, WA6ITF, has that story:

--

The Hamvention wants to stay at the Hara Arena. So says the Dayton Daily News which reports that Hamvention organizers are in negotiations for a two-year contract to comtinue using the Trotwood Ohio facility. My colleague Henry Feinberg, K2SSQ, has that part of the story:

--

The Dayton Daily News article Bill refereed to quotes Hamvention production manager Garry Matthews, KB8GOL. He says that organizers are pleased with Hara Arena and want to keep the show in the area. Also, that no other local venue can comfortably hold Hamvention at its current size. This says Matthews, makes a move unlikely.

A story in the May 2nd ARRL Letter said exhibitors would prefer the show to be held in Columbus if Hara wasn't available. Indianapolis and Cincinnati were also listed as possible sites.

When asked by the Dayton Daily News, Matthews said that the article doesn't mean Hamvention organizers are looking for another site. But says KB8GOL, organizers do have contingency plans that would move the convention elsewhere if Hara couldn't host it.

Will Hamvention 2004 be at the HARA Arena? We should know more by Sunday the 18th when Hamvention 2003 comes to an end.

I’m Henry Feinberg, K2SSQ. Bill.

--

Thanks Henry.

**

HAMVENTION 2003®: SOCIAL HOUR WILL HONOR AWARD WINNERS

Now turning to the social side of Hamvention 2003 -- and after all -- the Hamvention is a major social event -- there is some very good news. Seemingly taking a cue from the highly successful ham radio cocktail hour at the National Association of Broadcasters convention, the Hamvention will host a similar gathering this year. As Hamvention General Chairman Pat Neff, N8IGS, told RAIN's Hap Holly, KC9RP, this gathering is to honor the Hamventions award winners:

--

Neff: "Theres going to a an award winners reception at HARA on Saturday. Its going to start at I believe 6' o'clock and it will be within two of the largest forum rooms that will be converted. But its only going to have a capacity of about 450 people."

--

In addition to drinks and horderves what else can those buying tickets to this gathering expect?

--

The award winners will be giving acceptance speaches there and, like I say, its going to be an informal to-do that will allow the average attendee to be able to possibly get to talk with the award winners as well.

--

Neff says that the decision to hold the reception at the Hara Arena came as the result of feedback from past Hamvention attendees. Many said it was hard to spend the day at the show and then travel across town for a banquet. With the banquet now history and an informal reception at the Hara taking its place, those wanting to attend need only buy a ticket and hang around. We will.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF.

--

Amateur Radio Newsline has a team of reporters in Dayton and will provide full covering of Hamvention 2003. (ARNewsline™)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Hamvention repeater, W8BI, serving Dayton Ohio.

(5 sec pause here)

**

HAMVENTION 2003®: BIG HAPPENINGS IN DX

Still with Hamvention news, this years D-X forum should be one of the better ones in recent histoey. So says moderator Jay Slough, K4ZLE, who adds that the scheduled speakers are a really impressive line up. For instasnce, Daily D-X Editor Bernie McClenny, W3UR, will be talking on the recent AH3D operation. And Al Hernandez, K3VN on hand with the ZL7C story. The ARRL's Wayne Mills, N7NG with a DXCC update, and if thats not enough, Tedd Mirgliotta, KB8NW, will be on hand to present the Northern Ohio DX Association Award for the 2002 DXpedition of the Year. It looks like there will be something for everyone at Hamvention 2003. (OPDX)

**

RADIO LAW: HR-1478 GETS SUPPORT FROM CQ MAGAZINE

CQ Magazine has joined the ARRL in asking hams to support House Bill HR-1478. This is the measure re-introduced by New York Congressman Steve Israel to expand the limited protections of "PRB-1" to homeowners' associations and restrictive covenants.

According to the ARRL, the 2002 version of the bill died without action. The new bill initially had 13 co-sponsors from both parties including the only two known hams in Congress. They are identified as Representative Greg Walden, WB7OCE, of Oregon and Representative Mike Ross, WD5DVR, of Arkansas.

The ARRL and CQ are both now encouraging amateurs to contact their representatives in Congress to request that they support and even co-sponsor the bill. (CQ)

**

ENFORCEMENT: PIRATE BROADCASTER SENTENCED TO JAIL

A Florida pirate broadcaster will spend the next nine months in a federal prison. This is the sentence handed down by United States Magistrate David A. Baker against Rayon Sherwin "Junior" Payne.

Payne's conviction is the result of an investigation that began in February of 1999. About that time the Commission's Tampa Office began receiving complaints from residents and broadcasters in Orlando of interference to the reception of licensed broadcast stations. The investigation lead them to Payne's unlicensed station after which he was charged with multiple counts of operating an unlicensed FM radio facility.

Payne pleaded guilty to two of the counts before Magistrate Baker who also sentenced him to one year supervised release in addition to the jail time. Once he is released Payne must perform 50 hours of community service and must not violate any Federal, State or Local laws of the Communications Act of 1934.

The FCC announced the sentence on Monday May 12th. The case was prosecuted by the United States Attorney's Office for the Middle District of Florida.

(FCC)

**

ENFORCEMENT: AN EXPENSIVE LESSON FOR MICHIGAN HAM

The FCC has told a ham to pay a $12,000 fine for willful and repeated interference, broadcasting of music and failing to identify with his call sign. Being ordered to pay is Scott E. Kamm, N0UGN, currently of Souix City Iowa but who had his statiion licensed to the town of Waterbury Nebraska when he was first cited.

As previously reported, last December the FCC T-hunted down a strong signal on the input to a local repeater to Kamm's Waterbury Nebraska residence. Agents then performed a station inspection where they found a two meter transciever set to the repeaters frequecy pair. But Kamm denied any knowledge of the jamming, telling the inspectors that he never transmitted on the system and that the radio gear was used for monitoring purposes only.

But the FCC refused to buy Kamm's story. On January 24th of this year the regulatory agency issued Kamm a Notice of Aparenlt Liability in the amount of $12,000. Kamm never responded to it. And so a few days ago on May 7th the FCC affirmed its earlier order and gave Kamm 30 days tio pay up. (FCC)

**

ENFORCEMENT: $2400 FINE FOR UNREGISTERED TOWER

The FCC has also issued a $2400 a monetary forfeiture to Morris Communications, Inc. of Greenville, South Carolina for failing to register an antenna structure. The FCC calls this one a willful violation of Section 17.4(a) of the Commission's Rules.

On July 8, 2002, the Atlanta Office issued Morris a $3,000 forfeiture notice for failing to register its antenna structure in willful violation. In its response, Morris admits that its tower was not registered, but argued that the forfeiture should be rescinded because it did not "willfully" violate the rules.

Morris claims that it made two good faith attempts to register the structure in 1999, but the Commission first rejected its application on erroneous grounds and later returned it without explanation.

But says the FCC, the Rules provides that, effective July 1, 1996, the owner of any proposed or existing antenna structure that requires notification to the Federal Aviation Administration must register the structure with the Commission. Abother section of the Rules provides that the owner of an antenna structure that had been assigned painting or lighting requirements prior to July 1, 1996 must have registered the structure prior to July 1, 1998.

Morris admits that its Adrian tower was not registered at the time of the inspection on May 7, 2002. Accordingly, the FCC says that that Morris violated the Rules and has ordered it to pay the fine. The entire fionding is on-line at: http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-1366A1.doc (FCC)

**

RADIO RULES: FCC RESOLVES COMMERCIAL BROADCAST SPECTRUM ISSUE

The FCC has released new procedures to allocate and license the commercial F-M broadcast band. This, where conflicting commercial and noncommercial uses are proposed. Since most new F-M and T-V channels can be used for commercial purposes and would be affected by non-commercial proposals, the CGC Communicator says that this decision may have widespread implications. (CGC)

**

RADIO RULES: FAA TO SEND CLEARANCE DATA TO FCC ELECTRONICALLY

According to a Primedia trade publication, the Federal Communications Commission and the Federal Aviation Administration have announced that tower and antenna airspace clearance data from the FAA will now be transferred electronically to the FCC. This will enable the Commission to process antenna structure registration applications faster and more accurately, and will save staff time at both ends. The electronic transfer of data is also expected to reduce the time it takes to get this information into the FCC's database from one to two weeks to only one day. More information is opn the web at http://beradio.com/ar/radio_currents_24/index.htm#tower1 (CGC)

**

HAM RADIO PUBLICITY: NPR FEATURES “HELLO WORLD - A LIFE IN HAM RADIO”

Tom Walsh, K1TW, reports over the Internet that National Public Radio featured ham radio in a recent Talk of the Nation segment. Walsh says that the final 15 minutes of the two hour program on April 30th was devoted to the new book "Hello World - A life in Ham Radio” and even featured callers including someone who is a QSL manager.

Tom says that you can still hear the program. Just taker your web browser to the National Public Radio archives and bring up the April 30 version of Talk of the Nation. Go to the second hour, find the last 15 minutes, turn your speakers up and enjoy. The URL is www.npr.org/programs/totn/index.html>http://www.npr.org/programs/totn/index.html (K1TW, K1KI, others)

**

NAMES IN THE NEWS: W9GIG TO DEPART THE IRA

ARRL Central Division Director Dick Isely, W9GIG, says that he will not stand for re-election to an official position within the Illinois Repeater Association. Isley has been a guising force within the repeater council for years.

It was Isley’s guidence that helped to create the National Frequency Coordinators Committee several years ago. He has also served with ther Illinois Repeater Associuation for many years and has become a main stay in the repeater coordination community.

According to his departure announcement, the decision to stand-down has nothing directly to do with his position within the ARRL but he says that does want to put more of his time toward League matters. Isley says that he has thoroughly enjoyed working for the Illinois Repeater Association but feels that it is time that new people step up to leadership positions. He also wished the group continued success in its work of providing efficient and fair Amateur Radio repeater frequency coordination to the hams of Illinois. (Via E-Mail)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

THE IRAQ WAR: WHO IS ACCEPTING WHAT POST-CONFLICT OPERATIONS

With the war in Iraq now just about over, both CQ and the ARRL are accepting certain operations from that nation for their DX award programs. But there are some differences. Amateur Radio Newsline's Bruce Tennant, K6PZW, has that part of the story:

--
PKG HERE
--

Most observers believe that the situation regarding ham radio in Iraq is very fluid and criteria for operations will change. (ARRL, CQ, others)

**

INTERNATIONAL - AUSTRALIA: NEW 23 CM BEACON

VK4RTL experimental 23 centimeter beacon on air neat Townsville Australia. It weent on the air on 21st April on 1296.444 MHz at Mount Stuart for a trial run. Q-News reports that this mighty little beacon puts out a massive 2.5watts and can be heard on most modern tri-band handhelds around Townsville and Thuringowa. Reception and range reports go to vk4wit@wia.org.au (Q-News)

**

INTERNATIONAL - CANADA: CANADIAN SPECIAL PREFIXES.

Industry Canada has authorized the use of "Special Event Prefixes" between May 24th and July 27th to celebrate the 50th Anniversary of the National Library of Canada. The special prefixes are C-K for all V-E's, C-J for all V-A's, C-Y for all V-Oh's and C-Z for all V-Y's. The special prefixes will therefore be available for use in the upcoming C-Q W-P-X C-W Contest on May 24 and 25th.

**

INTERNATIONAL - ITALY: WOULD YOU LIKE TO FLY IN MY BALLOON

Remember the 1970's song Up-up and Away by the 5th Dimension? Well a ham radio group in Italy has come up with a 21st century Amateur Radio version of just such an event.

The Milan Chapter of the Italian Amateur Radio Society says that its planning a manned Amateur Radio Balloning Experiment to take to the sky on Saturday, May 17th from Mantova Airport. Operating on 144.330 Mhz upper sideband, the in-flight operation is slated to begin between 08:00 to 09:00 U-T-C and last between 1 and 3 hours. A-P-R-S will be used to track the balloon during the time its aloft.

More information on the flight is the groups wesite. That information appears on the groups website at www.arimi.it/rubriche/arbe.html (IT2SAI)

**

ON THE AIR: GRID CIRCLEING ROVERS WANTED

N9REP says over the VHF Reflector that the K9RN VHF Contest Group is now accepting applications for captive rovers during the June VHF/UHF contest. Wendell says that the terrain in and around grid square EN52 is very rugged and harsh and that the first requirement for rovers is a vehicle capable of handling any on-or-off road QSO task, particularly regarding grid circling.

Any team wishing to be a captive rover must supply their own approved vehicle. A list of vehicle manufacturers that appear to meet all of the demanding Rover specifications is at www.maximog.com (VHF Relector)

**

DX

In DX, word that the make-up of the CY9 DXpedition team is now complete and the operation will take place from July 24th to August 2nd. The team members are N0RN, N5VL, W0IZ, KO4RR, K5AAH, K5AB and VE7SV. They will be taking with them a Battle Creek Special and will operate on the low bands during all openings. Callsign will be given either at the beginning of the operation or shortly before. QSL via N5VL. (OPDX)

**

THAT FINAL ITEM: ITS T-HUNT TIME

And finally this wee, do you like hidden transmitter hunting? If you do then this one is for you. Here's Joe Moell, K0OV, has the latest information on the World Amateur Radio Direction Finding Championship games that are coming up.

--

Who are the best transmitter hunters in the country? That's what we'll find out when the Third USA ARDF Championships get under way near Cincinnati, Ohio on July 30. The sponsors, OH-KY-IN ARC and the Cincinnati Orienteering Club, promise two challenging radio-orienteering courses. One will be on two meters,

and the other on 80 meters. This is a test of individuals, and it's all on foot. You'll have five transmitters to find each day, negotiating your way through the forest with your map, compass and direction-finding gear. If you can walk or jog a 10 km racecourse, you have the stamina to complete an ARDF event. If you're a senior citizen, don't worry about being trounced by teenagers, because there are a total of nine age categories, five for men and boys, four for women and girls.

This year, the USA Championships are an international event, combined with the International Amateur Radio Union (IARU) Region 2 ARDF Championships. If past events are any indication, there will be plenty of international experts in the sport on hand, so you'll have a chance to learn foxtailing tips and techniques from the very best. Positions on ARDF Team USA to next year's World Championships in the Czech Republic are open, so perhaps you can earn a spot for yourself. We're looking for good candidates in all age/gender categories, so encourage your kids and grandkids to give it a try.

For the most intense experience, stay in the dorms at Miami University of Ohio, in close contact with the other competitors. But space is limited, so now is the time to make plans. You can stay elsewhere nearby if you like. In either case, time is getting short, so get registered at the Championships Web site: www.ardfusa.com That's ardfusa.com

For lots more on foxhunting, including equipment ideas and techniques, go to www.homingin.com. Read about past USA Championships and get a link to this year's. That's one word "homingin" --- homingin.com.

From southern California, where there's some kind of transmitter hunt almost every weekend, this is Joe Moell, Kay-zero-Oscar-Victor, for Amateur Radio Newsline.

--

Don’t worry if you missed those websites Joe mentioned. You will find them I the print edition of this weeks Amateur Radio Newsline report. (K0OV, ARNewsline™)

Did the responders on this thread read the FCC Report and Order that is
linked from the ARRL page. It says quite clearly that the listed
frequencies are the center yet people are still arguing which frequency
is meant.
It is unusual relative to usual ham practice since all rigs I have ever
used read the suppressed carrier frequency - not the center frequency.
But so what? How hard is it to set your rig to -1.4KHz of the listed
channels. Maybe this will help some people learn that setting your VFO
to say 14.349.5 still puts your signal out of the band.

Look again. The FCC usually just says "operate between 14.150 MHz
and 14.350 MHz with voice modes. It's up to us to pick out any frequency
to use to have all our sidebands inside that range. Which means don't
park your rig on 14.349 MHz and expect to keep all your USB sidebands
in band. It's just ham tradition to specify the frequency of our suppressed
carriers instead of the center of our USB signals.

After all, every ham eligible for the new freqs had to pass a code test.
And we all know that proves that we all are smart enough to handle this....

Just imagine, a band without a code allocation!

Not really all that big if someone is serious about it...

More than 30 years ago, K3JH (SK) had a custom-made 100+ foot tubular rotating mast.

On said mast he had long monoband Yagis for 6, 10, 15, 20 and 40 meters. All fullsized. The 40 meter one was 3 elements, and the other bands had more elements. I understand that most if not all of the Yagis were custom made, too.

Last but certainly not least, he had a full size 2 element 80 meter diamond quad. Top of the diamond hung from one of the big Yagis, the middle was supported by what looked like a 2 element Yagi but was actually mostly fiberglass, and the bottom was kept in line by a boom in the appropriate place. Yes, it all worked, and 'JH had a big signal.

All that and more on a ~1 acre suburban lot on Bryn Mawr, PA. All gone now. I saw it myself, though, many times, and I know the hams who built it.

Hello again Robert .... well I for one am not going to get involved in this "proficiency" discussion. I have stayed away from it over the years as it really is a dead end issue. It is that way because like Hennie Youngman says ..."How's the wife ...compared to what .." Some one who is at the 25 WPM level "may" look upon the 10 WPM as less proficient ..... my CW falls apart like a cheap sweater at 40 WPM or there about. I do hear guys that are 50 WPM and above ...I catch a word here and there but on the whole ..it just goes by. Do I routinely QSO with 40 plus WPM ops... yep but only if they bounce around 35 WPM . Do I QSO with 5 WPM op ??? again yes but at 5 WPM which I consider to be very "proficient" for a 5 WPM op. No hair splitting here just enjoyment of the mode.

BTW Robert I see no positives in bashing any class op ...we are here to learn and hopefully along the way have some fun and fellowship.

Take care and God Bless ....

point
> is a loud, obnoxious "So what?"

Oh come on Bob ... no need to get obnoxious about really anything on this newsgripes ..... you don't even have to get loud ....I'm listening and reading your points and am probably in more agreement than you may realize.

"Packet Radio may very well enhance the
> survivability of digital communications and the internet in the event of
> catastrophe." Hurray, and "So what?" Should everybody be required to be
able
> to set up a node? Hardly, no more than they should be required to fiddle
> about with CW.

Bob I cringe at the prospects of this happening on a national level ..... either we will shine as Americans and people in general or degenerate into what is happening in other parts of the world ....I wish I knew the answer.

You can require CW until the end of time, but if nobody's
> interested,

Glittering generality ..... nobody I guess all the thousands of stations I have worked over the years were either my imagination or non interested ops. I had a chat with a fellow on 2 meters one day on this same point. He repeatedly told me nobody operates CW with all the modern modes out there. I had asked if he had tuned about for several nights with good propagation on his HF rx in the CW bands. No reply ... I suggested that he try and see for himself. Granted I feel that there are not the number of staions out there that used to be on in general but you really can't tell that on a contest weekend. BTW which I avoid.

it's irrelevant how grand it is, or how reliable it is, or
> anything else. Heck, you'd probably get more licensees working this

question
> backwards. Let 'em get on HF and maybe _that'll_ give 'em the CW bug.
>

With what Bob ?? ... SSB ...digital ...etc with out even the least bit of
......gee I hate this word ....profeciency with CW.

Take care Robert ..God Bless

And that, Phil, is why I regard the rule as stupid. It's not FM we're discussing.
Some functionary somewhere, maybe ITU for all I know, decided to do something with his boring day and arbitrarily changed decades of technical convention. SSB began referenced to the carrier frequency and has been that way ever since. It's the intelligent way to describe it. There is no good reason to describe SSB in equivalent terms with other modes. The reason as I just described is obvious. In fact, it is technically incorrect to do so. 5532 USB is NOT 5329.6 but that's what ham radio readouts will have to show. It is simply oncorrect, and is a fine example of arbitrary ruling just because someone wanted it to be that way, in the face of technical accuracy.

In the absense of a *very* good reason to change that attribute, it can only be regarded as a dumb rule that will cause lots of confusion and more importantly cause many, many radio frequency readouts to read incorrectly - that is, assuming their operators have been apprised of the ridiculous rule.

If that's intelligent I sure don't see it.

Yerah, I know---it made perfect sense for every channel to be described as its center frequency. But in the case of SSB it is inaccurate on its

face.

>Dave never claimed that it helped build ALL the skills you need. It does
>build some of the skills.

You should re read his post. He claimed contesting is skill building for
emergency comm.

On several occasions, he implied contesting is equivalent to emergency
communications.

He surely did claim contesting helped build ALL the skills you need for
emergency communications.

From K4CAP (formerly K4YZ):

>So, Vipul, if Amateur Radio leads to obesity, what happened?

I never said ALL Hams are fat. Just that a greater percentage than the general population. Some people can eat more and not gain weight.

If you are in a hobby that tends to use less exercise, people eat more, and engage in anti-social behaviour, a greater percentage of these people will be fat.

>Steve, K4CAP

Congratulations on your new call sign.

Every antenna setup from my local club I've joined, they usually eat heavily
afterwards.

>Not from what I've seen. How many hamfests have you been to?

Quite a few. All demographics seem the same each one.

I read his posts very carefully. My statement still stands. He never
claimed that it builds all the skills one needs.

>

Nope, he never said that either. He just said it is valuable in building
skills.

>
> He surely did claim contesting helped build ALL the skills you need for
> emergency communications.

You will need to provide a direct quote from his postings to substantiate
that. There was no such statement in any of his postings that I saw.

Just got back from Dayton. Vshah, you'll be glad to know that roughly half the hams I saw were skinny. I saw hams of all ages, sizes, sexes, races and countries.

"Most Hams"...?!?!

I don't keep exact tabs on all the contests or contest results, but I do notice that the results posts in QST and "CQ" Magazines hardly reflects anything even remotely like "most" Hams.

Been there for awhile, haven't we? I worked there for a full commercial
career. But that certainly doesn't make it a good thing for ham radio.
Ham gear has never been subject to strict tolerances as has commercial
and othre non-ham gear. So now we get to play by commercial tolerance
rules, eh? That's a good thing for ham radio? Not in my book.

> puts the burden on the station operator and licensee to ensure

> that their operation complies with FCC Rules.

General blanket coverage for all services at all times. But the
difference is that hams have alway had BANDS, and never discrete
frequency channels with strict tolerances. I'm not real anxious to see
that change. It introduces a non-relaxed element to ham radio that tends
to change the nature of it.
But it would give me a use for my 100watt Motorola Micom crystal
controlled HF transciever! Maybe I'll crystal it up for 60 meters!
But when I order crystals, it'll have to be for frequencies 1.4 kc below
the authorized frequency. Only a Federal bureaucracy could screw things
up that badly, sorry!

>
>
> Look at it this way - the FCC gave us five "mini-bands" to

No way that properly describes the case. "Bands" convey frequency
flexibility and that's absent.

Not from me. I have all the equipment I need to stay in shape to handle
it and the knowledge to use it. Most hams have neither.

But it tells nothing about how wide your signal is. Do you feel you can trust the filters in ham gear as you would in commercial units? I don't. They deliberately were not built with the same care and to the same standards since the same rigorous tolerances were never demanded of them.

And again, you're an engineer and you and I know how to do all this. How many new Generals do you think picked up all this information enroute through the Question Pools?

>
> Kicking or screaming ?

Hey Phil- it ain't ME that I'm concerned about, rather all those legions of the unlearned out there in ham radio land who haven't even a clue what we're talking about. I spent a couple years with Uncle Sam, running around Europe calibrating electronic gizmos and picked up a pretty good feel for tolerances and how to calculate them. I also ran a VE team for eight years, while you sat in the SF director's office, remember? I *know* what we're dealing with here. Most of them don't. You can bet the farm there'll be a bunch of hams sitting on the posted frequency, not down 1.4khz.

And once more, for effect-- just because the rest of the world of radio has long used channels certainly doesn't mean it's a good thing for ham radio. I give you reference to the 40 channels below ten meters as evidence.
It's gonna be hard to move a couple kc's up the band to avoid all that QRM, isn't it?

If that's what ham radio is coming to then it's a good way to get us to lose interest, and one more method of spectrum swiping.

Jim:

Perhaps I've been a bit overzealous in my inclusion of FISTS in this particular thread, but my personal take on FISTS is that they appear to be more interested in paper-chasing than in seeking the goal which their organization espouses -- the "Preservation of Morse Code." Nancy Kott, WZ8C, the North American Secretary of the FISTS CW Club, made an impressive showing at the ARRL "Town Hall" forum at the 1997 Dayton Hamvention. She essentially demolished Fred Maia, W5YI, in open debate on the issue of code testing. She gained a great deal of momentum that day, but once she got the train rolling, she immediately seemed to jump off. There was nothing said thereafter from a standpoint of mobilizing "political" action on the part of the FISTS membership to attempt to counter the trend toward the reduction and eventual elimination of code testing requirements. I guess I felt more than a little bit let down by that. Since then, FISTS has become little more than a CW Awards Program. I guess I fail to see how that helps the FISTS "cause" of "preserving" the Morse Code, since they didn't see their way clear to making a concerted effort to support the continuance of code testing requirements.

Once all the present FISTS members have worked each other enough times to earn their Diamond, Platinum, Zinc, Magnesium, and other elemental awards, I wonder what they'll do once they run out of new CW users to work on-the-air? With the reduction and soon to be total

elimination of code testing, that day will surely come.

And you *know* that all this means your TS440 meets the necessary tolerances, right?

Good point Steve! I like to contest. Jim and Larry like CW. And Vipul
likes to whine........ ARS has something for everyone.

Maybe he'd be happier if QST had an award for that.

He claimed it was skill building for emergency comm skills. I claimed it is
only incidental to emergency comm.

The goals are different. One gains emergency comm skills if one practices that.
That is not what contests give points for.

>>He surely did claim contesting helped build ALL the skills you need for
>>emergency communications.
>
> And that statement would make you a liar, Vipul.

No, I claimed he understood the truth, but he was trying to mislead.

He made several posts insisting that contesting was skill building for
emergency comm. I point this out several times and he insists on it.

Any skill is chance correlation. No <responsible> person would say they are
useful for emergency comm. Picking out signals in a controlled situation is not
as useful for an emergency situation. Where is his demographics to determine
the INTENTIONS of contesters?

> 5 Hz at 5 MHz.

Yes. 0.1 PPM (or more properly 100 PPB) accuracy is equal
to 0.5 Hz at 5 MHz. The counter would be showing a correct
count to plus-minus the least significant digit.

Most "cheapie" frequency counters would have 1 to 5 PPM
accuracy leaving the factory. That's an error of only 5 to 25
Hz at 5 MHz. Most PLL or DDS-controlled transceivers
fine-tune in 10 Hz steps. 10 Hz is 2 PPM at 5 MHz.

The new 97.303 (s) rather clearly states "Amateur operators
shall ensure that their transmission occupies only the 2.8 KHz
centered around each of these frequencies." No need to go to
Part 2 for any reference although that should be useful (all
Parts are available free for download from the USGPO website
or via a link on the FCC website.

It should be a "no-brainer" to zero-beat a 5 or 10 MHz internal
TCXO or a transceiver againts a good WWV signal and trim
the crystal to within a 5 to 0.5 Hz beat. Problem is, too many
plug-and-play appliance operators never got farther in than the
front and rear panels and such a suggestion may be too
technical for those wizards of the airways. They just plugged
the box into the wall and played...no brains about the box's guts.

>> For that matter, channelization on ham radio is a new

The emission type specified in the new 97.303 is "2K8J3E."
Not "FM." :-)

> Some functionary somewhere, maybe ITU for all I know, decided to do
>something with his boring day and arbitrarily changed decades of
>technical convention.

Nope. Commercial "sideband" began in the 1930s. Amateur
"sideband" didn't start on its most-used mode ride until the late
1950s. By then the commercial and military "sideband" users
were well entrenched in their technical use and descriptions.

>SSB began referenced to the carrier frequency and
>has been that way ever since.

Ahem...the dial indicator on most SSB-capable transceivers
using PLL or DDS frequency control is offset to the center of
the filter passband. Those will shift depending on upper or

lower sideband selected.

>It's the intelligent way to describe it.

No, it's just a convention. Legally it will be more proper to
specify band limits without regard to band width...and the rules
state to operate within those band limits.

>There is no good reason to describe SSB in equivalent terms with other
>modes. The reason as I just described is obvious.

Amateur SSB is third on the long list of "sideband" users and
amateurs were among the last to adopt SSB wholeheartedly.
[small boat users may have been the last...] Amateurs were
never ever the first to use SSB.

>In fact, it is technically incorrect to do so.

Make up your mind. ?

>5532 USB is NOT 5329.6 but that's what
>ham radio readouts will have to show. It is simply oncorrect, and is a
>fine example of arbitrary ruling just because someone wanted it to be
>that way, in the face of technical accuracy.

Did you read R&O 03-105 and the new 97.303 content? Do so.
It is at the bottom of page 25 of the R&O released May 14, 2003.

Rather clear and explicit description of the five "mini-bands,"
allocated emission type and "transmission occupies only the
2.8 KHz centered around each of these frequencies."

> In the absense of a *very* good reason to change that attribute, it can
>only be regarded as a dumb rule that will cause lots of confusion and
>more importantly cause many, many radio frequency readouts to read
>incorrectly - that is, assuming their operators have been apprised of
>the ridiculous rule.

US civil radio regulations aren't driven by the conventions of
frequency displays on ready-built equipment in regards to
transmission of RF energy. The shift of frequency DISPLAY
is a user convenience convention...what concerns every other
user of the EM spectrum is the precise frequency of ANY
RF source.

> If that's intelligent I sure don't see it.

Pages 18 and 19 of R&O 03-105 list all the Commenters on
the NPRMs preceding the R&O. "Richard Carroll" was not on
that list.

> Yerah, I know---it made perfect sense for every channel to be described
>as its center frequency. But in the case of SSB it is inaccurate on its
>face.

Nooooo. It's just against the way YOU want it to be.

You are thinking ONLY of single-channel SSB users and how a few manufacturers designed the ready-built transceivers YOU and thousands of others use (including the HF SSB transceivers now in use by small-boat owners). Try thinking of describing a commercial SSB spectral occupancy made up of four 3 KHz chunks, each one having modulation data that starts and ends in a 100 to 2800 KHz spectral distribution...the four taking up about 12 KHz of RF bandspace. :-) Those were there before amateurs were using "sideband" in large numbers.

You now HAVE five little mini-bands in a frequency area not available to amateurs before (at least since the end of WW2). Why are you bitching so mightily?

Yep, she got the wall certificate also - in a real cheap green padded vinyl display folder. It says "Honorable Discharge."

On the DD-214 (Nov 88 printing), where is says "Character of Service" towards the bottom of the page, it says "Honorable." Just below that, it says "Separation Code," with "JFL" typed into that block. Finally, just below that, it says "Narrative Reason for Separation" with "Disability, Severance Pay" typed in.

My DD-214 (Nov 72 printing) says nothing about "Narrative Reason for Separation." Towards the top, it just says type of separation and character of service.

> Keep up the good work on that SSB VHF transceiver
> design...

Actually, a friend gave me an older transceiver that doesn't work and I'm trying to restore that at this point. Since it looks like I'll have to replace a good amount of the guts, I should learn a lot just from this. I wish I could get a schematic, but it doesn't have a name or model number on it. I have no idea who made it. Perhaps I should post a picture of it on the internet to see if anyone recognizes it. But, before I can do that, I have to get that darn camera working again. One of these days, I suppose.

Be careful here, hams have done some monstrous beams and still do 'em.
Right here in this neighborhood k3jh/n3ea (SK) had a fullsize
two-element 3.5 Mhz quad up even back in the '60s. That's a quad with
540+ feet of rotatable wires. And he spun it with an old WW2
prop-pitch motor. Without having to turn the earth at all.

Another idiotic statement.

If that's what "most Hams" like to do, then why aren't award numbers in the HUNDREDS of thousands, rather than a few dozens? There's over 600,000 Amateurs in the United States alone, several million worldwide.

DXCC has been around since about 1936. Yet my DXCC award, earned in 2000, is only about 37000.

Do you enjoy making yourself look so silly in public, Vipul? If so, why not get a bit more instant gratification and just sit on a public bus with a dunce cap on and your finger up your nose?

Not true! Broad & Sweeping generalizations like this are
generally always wrong. The U.S. military does not follow
any broad & sweeping channel plan.

>

Today's incoming no code tech has a reading comprehension
down near the 3rd grad level. But enough to memorize the
answers in the Radio Shack License Guide. Good Luck!

>
> Look at it this way - the FCC gave us five "mini-bands" to

Just for grins, please demonstrate how communicating with others can be
considered anti-social. While you'e at it, why not give a stab at
enlightening us on the relationship between anti-social behavior and
weight.

of
> ......gee I hate this word ....profeciency with CW.

Why not? Without the least bit of knowledge of CW, I've operated HF teletype over 1KW, encrypted; cut tapes, caught the sked, did all the things necessary as supervisor of radio room, including working other modes over the whole spectrum - VLF to UHF on the boat and VHF to SHF on shore duty, AM and FM phone, FSK, PSK, encrypted voice and teletype, you name it. Whenever I went to learn anything about radio systems (operating anywhere in the spectrum) nobody ever asked me if I knew CW, or implied that knowing it was somehow beneficial to my ability to operate the equipment or run the shack, nor is it (or was) a prerequisite for any of the tech schools I went to.

But not just any bureaucracy. The gross mismanagement and
incompetence spewing out of the FCC in the last few years
shows an agency in disarray, out of control and out of touch with
reality. Managers are paranoid about job protection and totally
absorbed in watching their back, while they delegate high management
level tasks out to very junior inexperienced people who cannot
figure out what a Hertz is, let alone a frequency allocation! What
we are seeing is an agency imploding into itself. Embroiled in
internal bickering and politics. I look for the agency to be sliced
and diced in the near future. Already there are rumblings of this
at very high levels.

This statement makes me wonder if you were there. I had my choice of
maybe 20 amplifiers, several SB200's to choose from. I only saw one amp
that was of the CB variety.

>>I didn't want to lug that thing around, so I went out to the bus. What

>
> Thats one day.

Nothing stops my being active after that either.

By the way, it isn't one day. We set up Friday night. We come back
Saturday and operate from the start of the contest through Sunday to the
end of the contest. I would hav thought that someone who knows enough
about Hams to be so judgemental would have already known that.

>

We have a picnic during Saturday evening. The people who have done
setup do indeed eat well. But if you spend the day pounding stakes,
putting up tents and radios, and all the other stuff involved in a
high-key field day, you can get away with eating a lot.

>>Not from what I've seen. How many hamfests have you been to?

Well, so have I. I think our opposite reactions say more about us than it does about the hamfest attendees. If you want to be so negative, then it's your right.

Can't be done, because Dave didn't say that. He did say, and I agree, that contesting enhances your ability to make an accurate QSO, taking and giving information. I think he may have noted that there is an endurance characteristic that is applied also. If not, I'm saying it now.

What contesting doesn't do is train someone to keep their wits about them in stressful situations. That is something that is hard to train for. Some aspects can be trained by repetitive and rote activities, but that only goes so far. If novel situations come up, and they do, then a person who can think clearly under stress is needed. And I don't know if that can be trained.

Now watch Vipul answer this with a one line - "no it doesn't".

There you have it. The qualifying tests are a beginning, not an end. We should all keep on learning, but the best way to learn is to Get on the air.

I wonder how many hams like the idea of having to know more than THEY already do in order to get a ticket.

Good post Tom.

Well that is where the outlook has changed rather drastically in the past decade or so. Prior to that shift in attitude, evidently designed to be all-inclusie ans to be sure that no potential ham, no matter how unlearned, ever feels "left out" because of his lack of knowledge. And for sure we don't want to scare anyone away by informing him that he will be required to actually study and show evidence of having done so.

Back in those golden times the entry level exams were indeed known as, well entry level. Beyond that one was expectred to show that he had indeed advanced.

Ham radio, we hardly knew ye.

Seems quite the opposite to me. The awards are just one facet of the
org. I don't have any of 'em, yet.

> Nancy Kott, WZ8C, the North American Secretary of the FISTS CW

> guess I felt more than a little bit let down by that.

As I understand it, the decision was made to focus on preserving the CODE, not the TEST. Several reasons:

- at least some FISTS members and prospective members support the code but oppose the test

- they would need to have an elected board and officers in order to represent the membership

- the basis and purpose of FISTS is, after all, to preserve the code itself, not any particular test or testing level. Political action to "save the test" could be seen as an admission that without the test, code use among hams will die out. Which simply gives anti-code and anti-test folks another argument.

The keys (pun intended) to preserving Morse Code are to use it, teach it, demonstrate it and most of all share the fun. That's what FISTS is all about.

Look at the other digital modes and their proponents. Did they need a test to get folks to use those modes?

> Since then, FISTS
> has become little more than a CW Awards Program.

Not from where I sit. Code Buddys, newsletters, and just general camaraderie are all parts of it. Exchanging FISTS numbers is just part of the game.

> I guess I fail to
> see how that helps the FISTS "cause" of "preserving" the Morse Code,
> since they didn't see their way clear to making a concerted effort to
> support the continuance of code testing requirements.

See above. Do you really think Morse will die out if the test goes away? I don't.
>
> Once all the present FISTS members have worked each other enough
> times to earn their Diamond, Platinum, Zinc, Magnesium, and other

> CW users to work on-the-air?

I've been using Morse Code on the ham bands since 1967 and I haven't run out of new folks to work yet.

> With the reduction and soon to be total
> elimination of code testing, that day will surely come.

Maybe - or maybe not.

You should have been around back in the '60s and early '70s. Back then, most of the hams I knew in this area (southern EPA, SNJ, northeastern MD and DE) had two kinds of rigs: HF SSB transceivers and VHF AM rigs. Almost all of the HF SSB transceivers of that time did a really poor job on CW - no narrow filter, no RIT, AGC on all the time.

Some did not even include CW at all. The VHF rigs were even worse. It was as if the manufacturers were trying to kill off CW by not making decent rigs for the mode.

If a ham wanted a good CW rig, he/she had to either buy separates (Collins 75S/32S, Drake R4/T4, Heath SB-300/400, various older used rigs), do extensive mods, or build a rig. I did the latter. The only folks who had QSK were those who homebrewed or modified their rigs to have it. I did that too.

It wasn't till Ten Tec and Ikensu that transceivers capable of serious CW work began to show up on the market.

Yet through all that, CW use survived and grew. It will continue to do so if we promote it, support it and demonstrate it. Test or no test.

> CB and two meters.

You have a very poor outlook of the very people now coming in to bolster
the ranks of the dying hams. I guess you think CW is the end all. If one
doesn't know code, they are stupid. Ham radio does not need you. Good-bye.

P.S. All the new techs over here know much more then that. They like
6 meters, too. The best of both worlds, HF & VHF in one band! IRLP
is fun for a day or so, then one wants real DX again...

I assume you are not talking about military service.

Hams do not think everyone who comes into the ARS is an idiot. Hams often encourage thier children to become Hams and show them how to operate well. I must admit, some of them seem to know what they are doing. This is a result of interest and practice.

Idiots do not join the ARS. If they do not have the skills, they can practice them.

Some join to become utility Hams. Hams that just use amateur radio for utility communications. For example, to save money on phone bill or to only use APRS and do nothing else with it.

Others join to become appliance operators. This is a step above the utility Ham. It is basically the same thing, except these Hams use several modes for fun also.

Others do service activities/emergency communications.

Some write programs and build circuits.

There are also other uses.

Only if local clubs do not encourage participation, do people not become useful. Such as meetings to discuss what one did and not include others. Then, the ARS suffers.

Does it really matter how the channel is specified? How many people know what the frequencies of broadcast TV channel 4 are? Or conversely, did you know that the FCC refers to channel number instead of carrier frequency when talking about the FM broadcast band?

Hams are like to just give each new "channel" a nickname like "305", "465", "665", "715" and "4305" So we can change channels quickly by dialing up either keypad entry or surf our memories on our rigs. And the names would relate to what we see on the frequency displays. As long as we get our signals in the proper place in the radio spectrum, it doesn't matter what we call it.

It's like on 2m when we say "the '79 machine" for the repeater on 146.79 freq you receive on and you transmit on 146.19 to get repeated.

>

It's 1.5Khz. Besides, more often than not, a newbie may hear other users and dial his rig down to get reasonable quality SSB reception and thus be nearly on the correct frequency. As there are guardbands between channels, being slightly off freq isn't very serious, only mildly serious. And that's because our SSB transmit filters have side skirts that are not "brick wall" from passband to stopband.

My rig's specs say "400Hz to 2600Hz" at 6dB down. Doesn't say what it's doing say at 10dB down, but it's likely not grossly wrong for the 5MHz band. also the frequency accuracy spec'd is ï¿½ 1 x 10^-5 of the carrier freq. That's 50Hz at 5MHz, which looks good enough. Say it drifted worse as the rig aged, it still won't be much worse.

The FCC full well knows that hams will use their existing modern rigs to get on 5 MHz, and if they though that we couldn't handle it, not let us have these allocations. Few hams have trouble being on freq for repeaters on the 2m band, and the percentage error you can have there is much less.

The biggest problem is likely to people dialing up the wrong freq on their rigs, but education is the answer there. Like QST telling us what numbers to set our rigs to to get our signals where they should be, when they publish the news about this allocation.

Both!

And we've had both types since long before I became a ham 35 years ago.

>Hey Jim,

yo
>
> Am I right that you have an Elecraft K2?

S/N 2084. Assembled two years ago (spring 2001). Added the antenna tuner and audio filter options. Used it QRP last two Field Days and November SS. Did not win the class but did better than I expected for the time spent and antennas used.

>I saw one and spoke with the
>rep about it at Dayton, and was very impressed with it.

The rx is fantastic. Not only very sensitive, but incredible dynamic range numbers, particularly at 5 kHz spacing. Very clean and 'transparent' audio. Incredible QSK. Variable bandwidth xtal lattice filter with four filter selections per mode. Also has: Split/RIT/XIT, ten memories, keyer with memory, defeatable AGC, selectable tuning rate, fully adjustable sidetone and BFO, lots of other features. Current demand on receive is very low for the performance obtained - typically about a quarter amp. Lacks passband tuning and general coverage rx.

The design puts basic radio performance before bells and whistles. For example, an ingenious PLL design gives very low phase noise from a simple circuit. The trade-off is that the indicated frequency may be off by as much as 100 Hz even if the reference oscillator is dead-on.

>I was just wondering what you though of the thing.

For decades I homebrewed my rigs from scratch because the price of a rig that had the features and performance I wanted was always well over $2000 (example: Ten Tec Omni 6). Plus I like having rigs I can work on without a lab full of speical tools and test equipment. The K2 comes very close to ideal for me. Only real problems are the size (it's almost too small) and the cost of getting the 100 watt amp and tuner options.

The contrast in size, weight and technology between the K2 and my homebrew Southgate Type 7 transceiver (latest in a long line of homebrew rigs) is surreal. Which simply adds to the fun. I use whichever rig strikes my fancy at the moment.

> It seems like an exceptional value.
>
All depends on what you want from a rig. A fully-loaded K2/100 (K2 with 100

watt amp, ATU, 160 meters/2nd rx antenna, noise blanker, and SSB will run you more than $1300 without power supply or microphone. And that's unbuilt. Compare that to what you'd pay for a new FT-897 or used Omni 6.

OTOH the basic K2 is $600, which sounds like a lot for a QRP rig but is actually very inexpensive for the rx and QSK performance. You don't have to spend money on options you don't want or need, and options can be added as funds become available. Options can also be removed if you don't want them any more.

See if you can find a local who has one. More than 3300 K2s out there now.

Building one requires a good temperature-controlled soldering station, (I use a milsurp Weller WCTPK - swords into plowshares and all that). good longnose and diagonal pliers, and a small screwdriver or two.

To get a feeling for what's inside, visit the website

http://www.elecraft.com

You can download the manuals, schematics and other info with no obligation.

Standard disclaimer: The only connection I have with Elecraft is as a satisfied customer.

In the "book" known as Title 47, Code of Federal Regulations
(five volumes, softbound, from US GPO), US radio amateurs
had to stay WITHIN BAND LIMITS and still do. Go outside those
band limit frequencies and you are IN VIOLATION.

What is the "tolerance" specified for the new 97.303 in FCC
03-150?

Did you see a "tolerance?" I didn't. Do you have a copy of 03-105?
I do.

>I'm not real anxious to see
>that change. It introduces a non-relaxed element to ham radio that tends
>to change the nature of it.

What "tends" are you talking about? The FCC has been quite
explicit on band edge frequencies since 1934.

>
>And again, you're an engineer and you and I know how to do all this.

Oh, my..."you know how to do this." And you avoided stating
anything on a setup to do so. :-)

All you need is a stable signal source of RF for a receiver or an
AF source for the transmitter audio, both of which are separately
measureable in frequency. Here are two ways of doing it:

For the receiver, set the RF source to a known in-band tunable
frequency, measure the source's frequency accurately. Tune
the receiver for a zero-beat on that carrier. The difference in
displayed receiver frequency with the measured source frequency
is your receiver's frequency tolerance. [you could do that alone
with a sample of the internal crystal frequency standard...this is
another way to do it] Retune the receiver until the indicated signal
level falls off so many S units. Take the difference between the
original zero-beat display and this display frequency...that is one
part of the internal receiver filter bandwidth. Retune again on the

other side of the zero-beat and note that difference. Add the two differences and you have the total receiver filter bandwidth.

For the transmitter spectral content in SSB, have a "closed" power output indication (your choice) with a dummy load and a sample of the RF output into the frequency counter. Apply the AF source to the transmitters' audio input at a constant level according to manufacturer's recommendation for nominal audio modulation level. Change the audio frequency over the entire tunable audio spectrum and note the RF power output level. If the RF power output level indication is reasonably accurate, you will wind up with the total transmitter modulation bandwidth, including both low and high-frequency audio roll-off points.

For a more accurate depiction of total transmitter bandwidth, including odd and sundry spurs and out-of-band delinquencies, an accurate spectrum analyzer is preferred. However, a wide-dynamic-range RF output power meter can show the total RF power output of a no-modulation-input condition...which could then be examined and compared with the out-of-band power levels allowed in Part 97.

>How
>many new Generals do you think picked up all this information enroute

The rule may be clear in that respect, but the problem is that there is much equipment that would still display the "center" frequency if the SSB transmission were AM (i.e. the carrier frequency is displayed) and they do NOT have a feature to display the center of the modulation sideband that is in use.

My HF rig, being a Kenwood TS-930, is like that.

The example of an FM signal above does not help since FM is like DSB or regular AM - a central carrier and modulation both above and below. SSB is "lopsided" in that respect.

Regardless of correctness, because of this mismatch between the ruling and custom, some are bound to "correct" it by tuning 1.4kHz down from the frequencies listed in the ruling while others will set their radios to display those exact frequencies listed (thus tuning by the suppressed carrier and being +1.4kHz above the rest). The bad designation, being in conflict with the common understanding by custom, will cause this interference problem - and that will be the FCC's fault for issuing a VAGUE ruling.

Which means that the "carrier" frequency, if it were AM and not SSB, would be
1.4kHz below, and that's what some radios need to be tuned to in order for the
SSB signal to be where it should.... SSB is not a "centered" emission in that
it isn't usually specified by the center of its signal but by where the
suppressed carrier would be. That's the problem.

> RF source.

What frequency shift? For many radios, when they change modes, the displayed frequency does not change. For many out there, that means set the displayed frequency (and thus the location of the suppressed carrier) to the number given, and for SSB, that means that the signal will be from frequency X to X+2.8kHz.

Probably because the order was written in such a way that there is confusion over where to tune the radio in order to produce the desired emission....

Someone needs a spanking.

>Hams do not think everyone who comes into the ARS is an idiot. Hams often
>encourage thier children to become Hams and show them how to operate well. I
>must admit, some of them seem to know what they are doing. This is a result
>of
>interest and practice.

Something we can agree on.

>Idiots do not join the ARS.

Not ALL idiots do...But SOME do...

>If they do not have the skills, they can practice them.

Like I was saying...

>Some join to become utility Hams.

"Utility Hams"...???

>Hams that just use amateur radio for utility
>communications. For example, to save money on phone bill or to only use APRS
>and do nothing else with it.

I see...yeet another "vipinition".

>Others join to become appliance operators.

No one "joins" Amateur Radio to be an "applicance operator".

>This is a step above the utility
>Ham. It is basically the same thing, except these Hams use several modes for
>fun also.

Ahhhhh....I see...Vipul is developing a CASTE system! Considering his probably national origin, this is understandable.

>Others do service activities/emergency communications.

Glad you finally accept this.

>Some write programs and build circuits.

I wrote a program for a high school play once.

>There are also other uses.

Looking for "preety fems", no doubt.

>Only if local clubs do not encourage participation, do people not become
>useful.

Uh huh...riiiiiiiiight.

>Such as meetings to discuss what one did and not include others. Then,
>the ARS suffers.

I think you're right...Hard to tell...

Mike:

Well, no point in complaining about the idiots. After all, the alleged
"majority"
of hams wanted reduced/eliminated code testing requirements. Now we have
them -- and significantly reduced written tests as well. So now, any idiot can
become a ham!

Reminds me of a line from a Harry Chapin song: "...And she walked away
in silence; It's strange but you'd never know; We'd both gotten what we'd
asked for, Such a long, long time ago." Unfortunately, for us hams, as it was
for Harry and Sue, "getting what we'd asked for" didn't bring a happy ending.

>dunce cap on and your finger up your nose?

I did worse than that when I sat on the bus on the way to that event where I joined a random group of Hams. Fate designed itself around me. Like that movie-final destination.

I don't know how I could have avoided it. Still, I blame myself. Of course, the fated occurence did not change things (the anti-social behaviour). It just pointed it out. Later that night, I joined a random group of Hams that were anti-social.

>I agree,
>that contesting enhances your ability to make an accurate QSO, taking
>and giving information.

No it doesn't.

Actually, it does, but once you get that contesting is not much use. There is a difference doing this on each mode. You look for different sounds in each mode.

Once you get that, the rest is just fun. If thats what you find fun. Seems more like work.

Contesting helps you know about antennas and propogation conditions.

>I think he may have noted that there is an
>endurance characteristic that is applied also. If not, I'm saying it now.

Yes, endurance is required. Tuning those knobs and keying CW for extended time periods requires that.

Thats why people consume chips before the event. Its carbo loading.

Even better is to do some jogging beforehand. An article in QST claims, one person increased his CW speed after jogging and because of it. Studies were claimed to have been done.

Also, the ability to stay awake. Caffene helps.

>What contesting doesn't do is train someone to keep their wits about
>them in stressful situations. That is something that is hard to train
>for.

Agree.

>Some aspects can be trained by repetitive and rote activities, but
>that only goes so far.

Contesting does not do that. If one plays tennis for fun every weekend, the person will get better. But, not as good if that person trained for it those weekends.

Also, contesting covers making those contacts. The other skills are not practiced because thats not what the points are for.

One of my relatives worked as an EMT. This is experience to draw an informed opinion from. Perhaps, I should ask his opinion.

>The goals may be different, but it's the same objective...The rapid,
>accurate exchange of precisely accurate information.

I agree with this.

>The "contest" nature adds
>the stress factor that one is under in "an emergency".

I do not agree with that.

It really depends on the situation. At the last Ham gathering, things like the wind blowing were a factor. At the event, they positioned vehicles, tents, etc to handle this situation. Antennas were put in place.

I learned, they perfected setting up and taking down quickly, by making adaptors, labelling setups, covering connectors, etc.

This was sort of like an emergency, since if they did not handle the situation (the heavy wind) well, this would be disasterous.

Contests by themselves do not train for that. Its where you set up which adds to the experience, not just the contest itself.

Do the same contest in a non-windy location, and its not much of a challenge.

> It's not about what contesters "intentions" are, Vippy.

I would agree if contesting tests those situations. The purpose of a contest is to have fun, not to test those situations. If you want to prepare for emergency communications, you do drills - not do a contest (a game).

Not to an appl;iance operator whose only interest is in dialing up a frequency and shooting the breeze. If you're interested in what you're actually doing and where you're doing it, it sure matters.

> As long as we get our signals in the proper
> place in the radio spectrum, it doesn't matter what we call it.

True. But if you don't know that FCC insists on you misdialing your frequency to be legal contrary to accurate technical convention as in this case, you can easily be in violation and have not violated anything but a silly, misleading rule. That may not matter to you but to me it sure does.

As I see it, what you missed is the difference between a discrete frequency channel and the accompanying tolerance (which AFAIK hasn't yet been announced) and which your TS440 was NOT designed to meet, and commercial gear which was. If you can't put numbers on the situation you can't be certain you're within tolerance. I guess "close" is gonna be good enough, then.

And, you seem to be competent to take care of this problem. Most "ordinary" hams are not. The relaxed tests notwithstanding, looks like they better learn..

>Does the term "antenna party" have any significance for you?

Yes, that's what they called those group antenna setups. I enjoyed those myself and learned a little.

>ust for grins, please demonstrate how communicating with others can be
>considered anti-social.

One example of anti-social behavior is going to a group function, and only speaking to your wife, not anyone at the party. Here, you are communicating with others (your wife). But, you are not communicating with others at the party.

In the contest, the communicating was done when others were socializing. At the remote location, they should have been on the beach, not at their radio.

I even saw this same thing occur in a video someone made about his DX trip where he setup to do contests. I saw this video at a Hamfest.

Seeing the other Ham on ATV, only shows that others are anti-social. Therefore, its a group supported anti-social activity.

I don't expect for you to understand it.

>While you'e at it, why not give a stab at
>enlightening us on the relationship between anti-social behavior and
>weight.

If one has too much stress and cannot sleep, one feels tired in the morning. Not enough sleep can hurt one's metabolism- no matter how much one exercises. This will lead to weight gain.
Here we have an emotional reaction (stress), leading to a physical reaction (tired, weight gain). Some stress may be caused by anti-social behavior.

One often overeats while watching TV or making random radio contacts. Excessive food consumption usually is anti-social behavior in itself and/or evidence of an anti-social person.

Others may lose weight because of anti-social nature. Weight loss for "no apparent reason" is often considered the result of anti-social behavior.

Sometimes food "substitutes" (or prevents) anti-social behavior.
Anti-social behavior often leads to food consumption.

> passband to stopband.
>

But--- that isn't the situation, Robert. We didn't get a band of frequencies, just 5 discrete channels, with no authorization off of those discrete frequencies beyond the allowed tolerance, whatever that turns out to be. Surely they won't fail to announce one-will they? I've given up on expecting rational things from that quarter, though.

>
> My rig's specs say "400Hz to 2600Hz" at 6dB down. Doesn't
> say what it's doing say at 10dB down, but it's likely not grossly
> wrong for the 5MHz band.

There's a good chance that if you check it with good enough test gear it won't meet its announced specs. Ham gear never was manufactured to meet close specifications and I've seen some that was fairly far out of specs when new.

> also the frequency accuracy spec'd
> is ï¿½ 1 x 10^-5 of the carrier freq. That's 50Hz at 5MHz, which
> looks good enough. Say it drifted worse as the rig aged, it still

If you assume that sort of benevolence from FCC you might get a rude surprise. If they announce commercial tolerances I wouldn't expect them to ignore violations.

>
>

Yes, but how about all those who don't get QST? Sure, most hams will get the word somehow, but plenty will not. Happens that way every time.

This entire 5 mHz allocation speaks so loud & clear as
to the idiocy of the FCC. One can only guess as to the
monumental incompetence found on the FCC employment
roster these days. This is truly an agency is diarray, more
like chaos.

That's right, Vipul. You're making a little progress. Tuck this in the back of your brain for future reference. It is the custom for the fellow whose antennas are being erected to provide food and beverages for those who volunteer their time and effort in his behalf. It is a *social* thing.

> >ust for grins, please demonstrate how communicating with others can be

No, I'm not doing either of those things and I don't know anyone who does so.

> In the contest, the communicating was done when others were socializing.

There is no obligation to socialize with a group when one's desire is to operate a contest. Operating in a contest is social activity with an entirely different group of people.

> At the
> remote location, they should have been on the beach, not at their > radio.

According to whom?

> I even saw this same thing occur in a video someone made about his DX trip
> where he setup to do contests. I saw this video at a Hamfest.

...and you didn't understand it. You came away with some peculiar concept which makes sense only to you.

> Seeing the other Ham on ATV, only shows that others are anti-social.
> Therefore, its a group supported anti-social activity.

How'd we get on ATV? Maybe you meant an All Terrain Vehicle. How does seeing someone demonstrate that other people are anti-social? How does any of this demonstrate the conclusion you've drawn in the last sentence above?

> I don't expect for you to understand it.

That's an understatement. I don't expect anyone to understand it.

> >While you'e at it, why not give a stab at
> >enlightening us on the relationship between anti-social behavior and
> >weight.
>
> If one has too much stress and cannot sleep, one feels tired in the morning.
> Not enough sleep can hurt one's metabolism- no matter how much one exercises.
> This will lead to weight gain.

Not necessarily.

> Here we have an emotional reaction (stress), leading to a physical reaction
> (tired, weight gain).

Not necessarily.

> Some stress may be caused by anti-social behavior.

Some stress may be caused by watching the evening news. Some stress may be caused by worrying about paying your bills. Some stress may be caused by social behavior. Some stress may be cause by not operating in a contest even though you'd like to because some Indian fellow in New England thinks that doing so is somehow anti-social.

> One often overeats while watching TV or making random radio contacts.

You're kidding. I never eat in the ham shack unless it is to grab a sandwich in the middle of a contest.

> Excessive food consumption usually is anti-social behavior in itself > and/or evidence of an anti-social person.

Really, Doctor Shah? I'm having trouble believing you.

> Others may lose weight because of anti-social nature. Weight loss for "no
> apparent reason" is often considered the result of anti-social behavior.

Really, Doctor Shah? A moment ago it was weight gain. You've been telling us all about fat, anti-social hams. Now you'd like us to worry about thin, anti-social hams (anti-social being defined by you as an individual not doing what you believe he should be doing with his time).

> Sometimes food "substitutes" (or prevents) anti-social behavior.

So now eating is a cure for anti-social behavior. I see.

> Anti-social behavior often leads to food consumption.

Hunger often leads to food consumption. Boredom can lead to food consumption. Now that I've read your latest attempt at rationalizing some of your ridiculous theories, I think I'll go have a bite to eat.

That's what I first thought, but a proper USB signal has audio from
300 Hz to 2.7 kHz audio, so if you tune 1.5
kHz low your sig should extend -1.2 kHz/+1.2 kHz around the
frequency number specified by the FCC.

What's the channel spacing in this band anyway? I hear some
signals that sound like RTTY on 5344.5, 5338.5, 5411.5, and
voice at 5505.0 (aviation weather reports). These numbers are
what my rig reads out, i.e., the suppressed carrier freq.

Some of the keys on my computer keyboard must be sticky...from
the laughing at the technical competence of these olde-tymers of
many yarns in amateur radio. :-)

On page 25 of FCC 03-105, the first sentence of the paragraph at
the bottom of the page says, in parentheses:

"...(emission type 2K8J3E)..."

It does not say "2k80J3E." If you don't like the way the FCC said
anything in FCC 03-105, just write them, not me. I don't regulate
US civil radio and don't issue NPRMs or R&Os.

The NPRM 02-136 containing RM-10209 (the new 5 MHz band request) was issued May 15, 2002. FCC 03-105 was issued on May 14, 2003, just one day short of a full year. Everyone who cared to comment had almost a whole year to say what they wanted but only a few did. The Commenters are listed on pages 18, 19 of FCC 03-105. Their comments are in the public database at the FCC, accessible through the FCC ECFS.

Feel free to start some new Memorandum at the FCC requesting a clarity of thought phrased in ham-speak on stating anything technical. The procedures to do so are also public knowledge from the FCC.

There's NO problem in the FCC 03-105 R&O.

There IS a problem in some amateurs' ability to read direct
explicit English.

FCC Rules aren't tailor-made to fit some current amateur radio
designs of ready-built equipment as to frequency display, shift
versus mode selection. FCC rules explicitly state a 2.8 KHz
bandwidth, the center frequency of each micro-band, and that it
is upper sideband.

Most of the brain-dead olde-tymers don't know squat about HOW
their ready-built, ready-designed rigs operate behind their front
panels. They don't bother to do a simple set-up to independently
measure their performance because they don't know how to do it.
Given an overt technical problem they would simply pack up their
radios to send back to the manufacturer (probably with an enclosed
angry note). That may be a new take on "advancing the state of the
radio art" in US amateur radio.

>> > In the absense of a *very* good reason to change that attribute, it can

>frequency (and thus the location of the suppressed carrier) to the number
>given, and for SSB, that means that the signal will be from frequency X to
>X+2.8kHz.

The internal "shift" varies with manufacturers, but was done by some
of them to center the tuning in the different internal IF filters per a
selected mode.

FCC doesn't care HOW that is done. They just clearly specified 5
little "micro-bands" a bit differently than QST or CQ might say in
their publications. Olde-tymers seem to have difficulty of dealing
with the unexpected way it is said, but that is the olde-tymers'
problem, not the FCC. If the olde-tymers can't adjust, then they
will go the way of all dinosaurs of the past...

>> > If that's intelligent I sure don't see it.

>> Why are you bitching so mightily?
>
>Probably because the order was written in such a way that there is confusion
>over where to tune the radio in order to produce the desired emission....

No. As I said, it is evident that olde-tymers just cannot adjust to
clear, explicit English phrased differently than the "technical
knowledge" spoon-fed them through ARRL publications.

The bottom line must be that some olde-tymers are just plain
pished at not getting what they (rightfully) expected. BFD.

ARRL's legal firm failed to convince the FCC that this "60m" band
was justified. But, the FCC gave US amateurs five little "micro-
bands" in that "60m" region...better than nothing at all, I'd say.

Nobody is forcing any US amateur to use those micro-bands. US
amateurs didn't have any 60m frequencies before. FCC did NOT

take anything away from US amateurs in that 60m region. A few brain-dead unadjustable olde-tymers will bitch, moan, and whine anyway...

Dickie is unable to tell anyone how it is done due to not knowing
how it is done. :-)

I described one way to do it accurately to a frequency counter's
accuracy...for both receiver and transmitter...any make or model.

I see your point. Which makes the "off frequency" rule even that much more
ridiculous.
And then there's still the matter of just what your SSB filter actually
passes.......

I doubt that THEY were the ones being anti-social.

You have clearly identified who the "anti-social" person is in this forum, and that would be you. You create "definitions" for your own use, ignore the conventions of others, call people names and make assertions that are neither based upon fact nor informed opinion.

You "dismiss" the opinions of others who obviously DO have more knowledge and experience than you, and refer to Amateur Radio as a "cult". On top of that you are racist and bigoted and looking for "preety fems" in all the wrong places.

Yes, Vipul, someone in Amateur Radio >>IS<< "anti-social", and I dare say it IS you.

Think about it.

Steve, K4CAP

I have been an EMT. I am also a trauma nurse. An "informed opinion" is
created from personal experiences reinforced by documentary evidence.

Your "relatives" experiences may be interesting, even informative, but NOT
germane to "emergency communications" such as those conducted by Amateur Radio.

>>The goals may be different, but it's the same objective...The rapid,

Most "emergency communications" take place in the AFTERMATH of the
disaster. While weather certainly plays a major role in the events of the
moment, the actual passing of traffic and the ACCURACY of that act are the
important issues.

>I learned, they perfected setting up and taking down quickly, by making
>adaptors, labelling setups, covering connectors, etc.

Good for you. There's hope yet, but I am still hesitant to hold my
breath.

>This was sort of like an emergency, since if they did not handle the
>situation
>(the heavy wind) well, this would be disasterous.

True. But even MORE "disasterous" is not getting the right message to the
right person, accurately, timely and intact. Worse yet is having personnel or
materials sent to someplace they did not need to be.

>Contests by themselves do not train for that. Its where you set up which adds
>to the experience, not just the contest itself.

Do I need to tatoo this to your forehead, Vippy? NO ONE said contesting is
the end-all to emergency communications.

>Do the same contest in a non-windy location, and its not much of a challenge.

Lack of knowledge and experience glaring again, Vippy. If it were THAT
simple to do, either more people would be doing it, or NO ONE would be doing it
due to a lack of challenge.

>> It's not about what contesters "intentions" are, Vippy.
>
>I would agree if contesting tests those situations. The purpose of a contest
>is
>to have fun, not to test those situations. If you want to prepare for
>emergency
>communications, you do drills - not do a contest (a game).

Contesting IS a form of a drill, Vippy. Case in point...Do you know what
the "contest exchange" is for the ARRL Sweepstakes, and WHY it is what it is?

(1) It is the NTS standard message traffic preamble format.

(2) Using it as a "contest exchange" reinforces it's use as a traffic
handling aid for NTS and EMERGENCY COMMUNICATIONS.

In a contest, lack of speed and accuracy costs points.

In an emergency, lack of speed and accuracy may cost lives.

It really is THAT simple.

Ranting and raving in USENET like you?

>No. As I said, it is evident that olde-tymers just cannot adjust to
> clear, explicit English phrased differently than the "technical
> knowledge" spoon-fed them through ARRL publications.

"You" have yet to prove there's a problem. One person asked a question
and you have branded ALL Amateur Radio as being maladjusted.

What an idiot.

>The bottom line must be that some olde-tymers are just plain
> pished at not getting what they (rightfully) expected. BFD.

Sounds like a certain ex-radio technician whining about not being
recognized for the genius he perceives himself and wondering why Radioland has
not accepted him for that.

>ARRL's legal firm failed to convince the FCC that this "60m" band
> was justified.

The ARRL "convince(ed)" them fine. The NTIA exerted more sway with it's
comments vis-a-vis other applications. They (NTIA) were, in the end, right.

>But, the FCC gave US amateurs five little "micro-
> bands" in that "60m" region...better than nothing at all, I'd say.

As a non-licensee and not being able to use ANY Amateur allocation, you
could say that about ANY slice of spectrum.

>A few

QST, when they publish the fact that we will be getting this
allocation, should mention how the FCC specifies the frequencies,
and point out that most ham rigs traditionally display the suppressed
carrier freq, and that we need to dial up the rig so the display
reads 1.5KHz lower than the FCC numbers. And, as there are only
5 freqs, just list the numbers translated into "ham" from "FCC/NATO".

>
> And that, Phil, is why I regard the rule as stupid. It's not FM we're
>discussing.

Here are the rules being talked about, from the definitions section
of Part 2. The (RR) means they were cribbed from the Radio Regulations:

Assigned Frequency. The centre of the frequency band assigned to a
station. (RR)
Assigned Frequency Band. The frequency band within which the
emission of a station is authorized; the width of the band equals the
necessary bandwidth plus twice the absolute value of the frequency
tolerance. Where space stations are concerned, the assigned frequency
band includes twice the maximum Doppler shift that may occur in relation
to any point of the Earth's surface. (RR)

Notice that they make no mention of any mode at all. That's because, in
general, an "assigned frequency band" is not necessarily associated with
any particular mode, it is just an assignment of a slice of spectrum, and
that spectrum doesn't move when the mode changes. The channel is hence
specified in a way (center frequency + bandwidth) which is independent of
the mode being used and can be understood by anyone no matter what mode
they're using. The channel is the same, no matter what the mode.

> Some functionary somewhere, maybe ITU for all I know, decided to do
>something with his boring day and arbitrarily changed decades of
>technical convention. SSB began referenced to the carrier frequency and
>has been that way ever since.

I think what the ITU standardized was a way to specify frequency assignments independent of the mode being used, which makes sense to me since, in general, the same frequency assignment could be used by many modes. It is the case that the particular assignments you're talking about are currently constrained to USB only for hams, but the mode restrictions could change without changing the frequency restrictions. If in future they decided to allow all authorized modes that fit in the same channels, then when changing modes on your ham transceiver from USB to CW to LSB you would also need to change the frequency on the dial, no matter how the channel frequencies were specified. If the channel frequency was specified with respect to the (untransmitted) USB carrier frequency, it would be wrong for CW and LSB despite the fact that the channel hasn't moved.

>There is no good reason to describe SSB in equivalent terms with other
>modes. The reason as I just described is obvious. In fact, it is
>technically incorrect to do so. 5532 USB is NOT 5329.6 but that's what
>ham radio readouts will have to show.

It seems to me the fundamental technical problem is that there is no way to specify a single readout frequency for your ham transceiver which will keep the transmitter output in the channel independent of the mode you set the transceiver to. Even though the channel doesn't move when the mode changes, you still need to twist the frequency knob on your transceiver when you change the mode switch.

I hence think that what you are complaining about is not a problem with the regulations but rather is a consequence of the fact that your ham transceiver wasn't designed for use in a channelized environment. A friendier radio for a channelized environment might center the transmitter output on the (ITU defined) assigned frequency independent of mode, or might even just show channel numbers instead of frequencies, but since your radio wasn't designed explicitly for this environment it does something else. It seems like that's okay, though, since you are a resourceful ham and should be able to make do with what you have available even if it means doing some math.

Here's a bottom line for you: You aren't involved in any way. You won't operate on the frequencies in question. You don't regulate the frequencies in question. You're just a senior citizen SWL with attitude.

> Nobody is forcing any US amateur to use those micro-bands. US

What is any of this to you? You aren't involved in amateur radio.

It isn't as if such decisions are real brain teasers, Vipul. Let common
sense lead your way.

> I learned, they perfected setting up and taking down quickly, by making
> adaptors, labelling setups, covering connectors, etc.

Every ham I know does this sort of thing on a routine basis. Don't you?

> This was sort of like an emergency, since if they did not handle the situation
> (the heavy wind) well, this would be disasterous.

If an emergency involves heavy winds, the antennas will still need to be
erected. If they fall, they'll have to be erected again.

> Contests by themselves do not train for that.

Who said they did? Doesn't your common sense tell you anything about
heavy wind? My location is at a little over 1500 feet at one of the
highest points in the area. We have heavy winds much of the time.

All of my antennas were put up with this in mind. If you wanted to
mount a very large triband yagi ten feet above the top of your tower and
wanted to stack VHF antennas below the tribander, what would you do to
minimize the chance of wind damage?

> Its where you set up which adds
> to the experience, not just the contest itself.

In some emergencies, you have little choice in where you set up. You
set up where the emergency is taking place.

> Do the same contest in a non-windy location, and its not much of a challenge.

Are we talking of challenges or preparedness?

> > It's not about what contesters "intentions" are, Vippy.
>
> I would agree if contesting tests those situations. The purpose of a contest is
> to have fun, not to test those situations. If you want to prepare for emergency
> communications, you do drills - not do a contest (a game).

By its very nature, contesting builds operating skills. Most contesters
do not limit their operation to contesting. Many are skilled traffic
handlers and many are involved in ARES.

This is another of those instances in which I feel you do not possess
sufficient experience or information on which to base a valid opinion.

If you like it, it will ruin you for most manufactured stuff. You've
been warned.

> I'll probably take the stepped route to get everything.

Good approach - makes birthday and holiday present-buying easy for
your family. Which options you choose depends a lot on what you want
the rig to do.

If I had it to do over I would have done the "unmodule" thing, though.
That's where you install the option sockets ahead of time so you don't
have to unsolder jumpers and maybe mess with the heatsink.

Don't let anybody tell you hams aren't technical!

Will any hams who stole toilet paper from the rest rooms
at Dayton please return same to the Dayton Convention or
mail a check for payment of same. Contrary to what some
hams believed, toilet paper in the rest rooms was not one of
the "freebie" hand outs. We ran out of toilet paper in many
cases and hams having to take a dump.....well....you fill in the
blanks. Hope you washed your hands after shaking hands
with other hams.

Thanks,

Randy

Seems like the bank's rate is higher. 3% seems higher than 0.6%.

Also, note that this is a projected, not actual growth rate. I would need to see a Ham radio growth prospectus report.

However, I wouldn't want to bet on it. I heard someone got in trouble doing that.

It isn't just an "appliance operator" situation. Consider what you do
if someone you are in a QSO suggests you shift to frequency NNN.
Do you set your rig's digital readout to an offset from NNN on the
assumption that NNN is the center frequency of an SSB signal or
do you set your readout to NNN and find you are exactly where
the other ham is expected to be?

The point is that the design and execution of today's transcievers
consider carrier frequency, not center frequency of an SSB signal.

I suppose the ARRL will simply not that the actual carrier frequency
for these new 5 mhz channels are NNN, YYY, ZZZ, etc and we'll all
then use that as opposed to worrying what the FCC regs actually
stated.

I haven't read the new rules, so I don't know what the actual mode(s)
allowed for these channels are, thus my SSB example may not actually be
applicable.

> > As long as we get our signals in the proper
> > place in the radio spectrum, it doesn't matter what we call it.

can
> easily be in violation and have not violated anything but a silly,
misleading
> rule. That may not matter to you but to me it sure does.

On this one, I agree with Dick. This is (IMHO) a practical issue of
writting
rules that take into account the accepted practice for a service. Indeed,
the
rules could easily have stated both a center freq and a carrier freq for
each
channel (again, assuming SSB is allowed mode).

Cheers,
Bill K2UNK

Agree completely. In fact, both the center freq AND the suppressed carrier
frequency could easily have been in the regs.

Cheers,

Okay, contesting builds some of the many skills needed. Contesting alone would
not be sufficient for emergency comm.

Note that this is optional, as far as the contest rules are. It does affect how fast you can set up your station. However, it does not affect your contest score. So, only if Hams want to do this will they get better at it. The contest does not test for this.

>If an emergency involves heavy winds, the antennas will still need to be
>erected. If they fall, they'll have to be erected again.

The last Field day I went to was in a park'g lot (except for antennas of course). It was safe from winds and rain. Like I said, as far as the contest goes, the setup part is optional (not tested by the contest).

Apparently, they couldn't even get that correct! The bandwidth component is supposed to have THREE significant digits - and that one only has two. The trailing zero, although understood, is the third digit, so it's supposed to be there. As printed, it's not a valid emission identifier, so can this whole thing be moot anyway! :-)

I didn't say that I don't understand that; in fact I do. However, I bet that there are plenty of people who upon first read will set their suppressed carrier frequency to the number specified, not realizing that what was authorized was not f through f+2.8kHz, which is what needed to be said for that interpretation to be valid.

The fact that they don't means that they will come up and operate 1.4kHz off
frequency - and that will be everyone's problem, not just theirs.

You make this sound as if it's a problem of age. I bet that there are
20-year-olds and 40-year-olds who will be just as confused about this as your
"olde-tymers" (the 70+ crowd).

The regulation itself may be clear in what it literally says. The problem is
that it is NOT written with regards to the conventions that everyone
understands.

With these new channels, I guess most of us will "snip the diode"
in our rigs to allow transmisison on frequencies not otherwise programed
as being amateur bands. I'll have to dig out my TS-690 manual which
I recall stated how to do it.

Cheers,
Bill K2UNK

No, its logical classification.

The word "contesting" is "Ham speak". Contest usually means a competetive activity.

In Ham radio, the word contesting is changed to mean to a radio contact chasing game. By the very definition, this is what a contest is. This limits other possibilities. It therefore becomes the defining activity for Ham radio.

What is vague about saying that the center of the occupied
band is 5xxx. If one cannot figure out where to put the
suppressed carrier to get the center of the occupied band at
5xxx, one has no business operating that transmitter.

The carrier offset depends on the actual signal bandwidth for
the SSB signal produced by a specific rig. Just because 2.8 is
pretty common, doesn't mean all rigs have a 2.8 bandwidth
implemented.

It seems to me the only way to assure that my carrier and yours
are in sync is if we specifically agree to a 1.4KHz center frequency as
an assumption. My signal may not actually be 2.8 wide and the
center frequency of my signal might actually be only 1.3 or less
up from my suppressed carrier freq.

Ultimately, to be sure we are able to make quick contacts for
emergency comms, we'll likly all agree via the ARRL that the
supp. carrier frequency for the channels is a specific frequency
(offset 1.4 from the FCC rules specified center freq.)

Cheers,
Bill K2UNK

Oh man, Vipul. Contesting is extremely competitive. You think I stay up
all night during Field day just to be antisocial? I'm racking up points
all night long. Another event I'm involved heavily in, the PAQSO party,
is super competitive too. And all the others I do seem just about the same.

It just seems you don't understand it at all. Note this is not the same
as liking it. No one has to like contesting or any other form of ham
activity at all.

The fact that no tolerance is specified means that we don't have to worry about
it much. As long as we're within a couple of hundred Hz, I don;t think FCC is
going to get upset.

>If you can't put numbers on the
>situation you can't be certain you're within tolerance. I guess "close" is

Take the announced center freqs and subtract 1.5 kHz. Tune around each freq for
some non-amateurs and zero them in. Note dial readings. Job done.
>
>And, you seem to be competent to take care of this problem. Most
>"ordinary" hams are not.

I disagree!

You've been reading too many of Len Over 21's posts, Dick. Most of the hams I
know will be able to comply with the rules once they have the information. No
big deal.

>The relaxed tests notwithstanding, looks like they better learn..
>
They will.

Sure, it makes more sense to define SSB by the suppressed carrier freq,
regardless of whether it's USB, LSB, ISB or whatever. One good reason is that
if everyone uses the suppressed carrier as the defining freq, then when you set
the rig on freq, you KNOW it's tuned right.

But the folks who are primary users of 60 meters don't do it that way. So we
have to play by their rules. If it were up to the primary users we probably
wouldn't have any access to 60 meters at all. 60 can be a good test of how
adaptable hams are.

From what I see in the R&O, it's clear that 9/11 had a big effect on the views
of NTIA towards assets like HF allocations.

--

What most folks are missing is that it's an insidious secret plot to stamp out LSB below 10 MHz....

The vagueness is due to the custom of specifying a frequency by where the supressed carrier would fall (had it not been supressed). That's not what the FCC did but that's how plenty of people will interpret it - because they won't read it the same way as we do.

Um, let's see. Ham radio means contests? I was first licensed in 1962 (WN2CJV), general in 1964 and extra in 1966 (WB2OSP). Then WA3RJX and N2JH. I dropped the tickets and get back in 1993 as AA2QA. I've enjoyed chatting with folks all over the world via CW, AM, SSB, RTTY, and FM. I've *never* entered any contests. Handled a number of phone patch traffic and handled emergency traffic, but never been involved in a contest. Must be I'm not a ham :)

Nothing strange about it at all, Steve.

As explained on the site, AH0A's computing methods subtract all expirations that occur in a given month, and treat them as if they all occur on the first of that month. That's why the first weekly total is so much lower than the end-of-month total of the previous month. It all comes out in the wash, though.

Because a straight renewal can only be done within 90 days of the expiration date, a fair number of those renewing are going to be counted as expirations using AH0A's method.

Here's a trivia question in the making: Which of the closed-to-new-licenses classes will disappear first? We know that Tech Plus will go away in approximately 6 years and 10 months even if the rules don't change, because by then all Tech Pluses will have either been renewed as Techs, upgraded or expired. But will Novice or Advanced disappear first?

Steve:

The Novice and Advanced categories don't look any "stranger" to me
than any of the rest. Overall, the increases are so tiny, they would seem
to consist mainly of last minute renewals within the two-year grace
period, as Bob Casey has already surmised.

Steve:

Precisely. Anyone who has seen the answers enough times can usually pick them out from short-term memory. This is infinitely easier than learning the material in the first place, and is the kind of short-cut that goes hand-in-
hand with reducing/eliminating the code testing requirements. It all boils down to reducing the time it takes to develop practical knowledge and operating skill, and simply getting a license into the hot little hand of someone who will hopefully become an ARRL member and buyer of high-
priced ham gear!

I am definitely not opposed to growth in the ARS, but I would have preferred to see it come about the right way -- with our previous licensing system which incrementally awarded increased knowledge and operational skill with increased privileges.

Assuming this assertion is valid, then conservatively speaking,
85% of today's ham radio operators have no business operating
a transmitter. I offer as proof my posting about the stolen toilet
paper at the Dayton Hamfest. If hams assume that toilet paper
in the Dayton rest rooms is there for the taking and just another
perceived "freebie," then that is clear example of the mentality in
today's amateur radio rank and file. Pretty scary, isn't it?

To YOU it's "logical". You invented the term in order to make it "right" in your mind, Vippy. Many others call it "Honeydew" traffic..."Honey do this...Honey do that..."

>The word "contesting" is "Ham speak". Contest usually means a competetive
>activity.

"Ham speak"...?!?!

"Usually" means a competitive activity...?!?!?

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA! ! ! ! ! !

>In Ham radio, the word contesting is changed to mean to a radio contact
>chasing
>game.

Stand up at a meeting of the YCCC and call it a "game", Vippy. They're in your backyard...you can drop in anytime...Or maybe you'd care to drive down to Philly and do the same thing at the FRC..?!?!

By the very definition, this is what a contest is. This limits other
>possibilities. It therefore becomes the defining activity for Ham radio.

>This limits other
>possibilities. It therefore becomes the defining activity for Ham radio.

Contesting is a lot of fun and perpetuates development of many of the higher-performance radios we see on the market today, Vippy. Read tha ads...Talk with the manufacturer reps. Ask them if they'd put that kind of R&D money into a "game" unless there was more than just a few people doing it.

And as much fun as it is, it is hardly "the" defining activitiy for Amateur Radio.

Yeah...the price bites. It used to be you bought a kit and saved money cuz
you did the lion's share of the work. Now you buy a kit and pay a premium for
the "fun" you are going to have doing it!

I priced out the K2 with the options I'd ant and one (six meters)
transverter kit and came in just over $1100. Like you said...NOT for the
timid!

But I WANT one!

Odds are they won't even know the channels exist...but seriously,
the issue goes to what constitutes good regulations as to the regs
being understandable, clear and concise.

Neither novice nor advanced will disappear in the next 10 years as many have actually been renewed and 100s more are renewed every month giving those renewals another 10 years of existence....unless they all suddenly upgrade.

No, it is not.

> Contest usually means a competetive
> activity.

I contest your homemade definitions. My use of the word "contest" did
not involve a competitive activity.

> In Ham radio, the word contesting is changed to mean to a radio > contact chasing game.

No, the meaning of the word is not changed and amateur radio contesting
is not simply "contact chasing game". To do well, you'll need both
contacts and multipliers. In some contests, you'll gain fewer points
with contacts on your own continent than you will by working stations on
a different continent. If you bust a call or the exchange, you'll not
get credit for the contact. Too many busted calls or exchanges and
you'd be disqualified.

> By the very definition, this is what a contest is.

If your definition is wrong (and it is) your latest rant will evaporate.

> This limits other possibilities.

What limits other possibilities?

> It therefore becomes the defining activity for Ham radio.

Darn it! You're wrong yet again.

Vipul, are you an adult?

That obviously depends on the width of the channel. At 2.8 khz of course you're correct. At 6 khz, no. Both SSSC sidebands, most digital modes, and the CW carrier would all be covered, and there would of course be empty space within the channel depending on the mode. So, by restricting the mode to 2.8 khz, we're forced to the commercial definition of "channel". The root of the problem, and AFAIC it is a problem. Any change which causes me that much discomfiture is a problem. :-) And I'll say it one more time, I'm mostly concerned that many hams will wander into violation of the rules simply because this is a totally new way to define operating frequency within the ARS.

> Even though the channel doesn't

I think you have just given the expanded and eminently clear version of what Phil had to say. :-)

Of course none of this was an issue until the instant case which just happens to be the original amateur radio assignment (at least in the US) where FCC has assigned discrete frequency channels, as far as I'm aware

And again, it's not me that needs to be concerned-so long as I've been informed that, with these assignments only, I need to be concerned with FCC's commercial definition of "assigned frequency" and how it differs from 100 years of amateur radio practice. I'm rather certain that a fairly large percentage of hams will miss that important piece of information.

Dick

Ignoring convention and failing to clarify new rules when they
radically depart from 100 years of that convention would seem to be poor
administration, too.

There you have it. Some brain-dead types can't "interpret"
English and clear, explicit descriptions.

How can you expect them to "interpret" regulations which have
not changed in years?

Robert Casey <wa2ise@ix.netcom.com>

>
> What about beams? Can I concentrate my effective radiated
> power in one direction,

Yes, so long as it does not exceed 50W in that direction. In other words you can have a 10W transmitter, a transmission line with 3dB of loss, and a directional antenna with 10dB of gain, to give you 50W erp off the front of the beam. (You CANNOT use that antenna/feedline system with a 100W transmitter, however, since your erp in that case would be 500W.)

Good luck on this one now,

de Hans, DL1/K0HB
Dusseldorf

You're too young to remember Sear's catalogs in the outhouse??

Take that 8.5x11 sheet of paper that WAS a free handout and fold it both ways so it is 1/4 its original size. Tear off one corner leaving a hole in the center when the paper is unfolded. Save the piece you tore out. Put your finger thru the hole and clean yourself with it. Wipe the finger as you remove the paper then clean under the nail with the small piece you saved. If you favor Morse testing, you may want to suck the finger clean to avoid getting your key dirty.

You know that, I know that, thousands upon thousand of non-
amateur radio operators know that...but it does NOT apply to
US amateur radio.

The major skill necessary in US amateur radio is to become
skilled/proficient in on-off keying morse coding mode. That is an
absolute. It may not disagreed with among the denizens of this
din of inequity.

US amateur radio will be the last bastion of morse code in radio,
the Masada of Morse, defended by brain-dead fanatics against
all odds, against all logic, against the wishes of the majority.

The Archaic Radiotelegraphy Society shall not fall...

The FCC has only been in existance for 69 years, not "100."

Single sideband on radio was first tried about 1928...75 years
ago, not "100."

The very first US radio regulating agency was created in 1912,
91 years ago, not "100."

Can olde-tymer Dickie state when radio regulation first used
"convention" of calling out frequency instead of wavelength?
[hint: it wasn't even close to "100 years" ago]

Dickie has a difficult time in reading federal radio regulations.
To help him out, a noted amateur radio organization should
strive to have Part 97 rewritten to be more like the Q&A
"rules" given in Part 95. :-)

Neither of us has any problem in calculating either. Those
who have problems have no business being on tha air with a
transmitter that has a "VFO" whether synthesized or not.

My gut feeling is that those here who are doing the complaining
are perfectly capable of making that computation without any
"brain smoke".

>answers away. THAT is the problem.

The nationwide "Multistate Bar Exam" consists of two hundred multiple-choice questions, with about half of them coming from "The Green Book" of 600 questions and answers published by the givers of the test. These questions cover "black letter" law in six specific fields.

For all 200 questions, the only thing that the candidate "really needs to know" is "a", "b", "c", or "d", and yes, for all 200, the correct answer is right there in front of you.

Yet, 135 out of 200 is a very good score, and in most states 150 or more is a guranteed "pass" regardless of one's performance on the essay questions which cover ability to apply and express legal principles.

The difference between the MBE and the ARS test, of course, is the difficulty of the questions and the fact that two out of the four possible answers are very close, so the candidate must have the ability to separate them and find the most correct answer.

In sum, it's not the fact that the answers are published, it's the quality of the questions and answers.

No, but it could be under his neat little cap. Vipul spent the time and effort to obtain a license only to spend his time slamming amateur radio and radio amateurs. If he doesn't find amateur radio to his liking and if he dislikes being around those who are old, fat and not interested in the things he likes, perhaps he should sell his 2m rig and move on to another interest. Stamp collecting bored me. I gave away my stamp collection and moved on. I didn't waste my time in finding fault with stamp collectors.

The regulation "as written" is technically correct.

Remember that these channels are not the FCC's to give away
free and clear. I suspect strongly that NTIA specified how the
channels were to be designated and what they were to be used for.

We're playing in the "big boy" leagues now.

Funny that most of the gripers here are folks who deal in
professional comms....they should know better.

Hey, it was hard forty years ago getting used to properly
specify frequencies as "cycles per second" rather than as
"cycles" and then only a short time later as "Hertz".

We all have to grow.

I and other hams who work in frequency management had no
problem at all. It's clear and legible. Even folks who have
never seen this sort of designation before can't miss seeing
the "center frequency" bit. If they ignore it and just plow
"full steam ahead" that's their problem 100%.

We're in the "big boy" leagues now.....I would have been very
upset to have seen it designated in "comic book level" terms.

Some of us would think that the FCC is the radio equivalent of
Saddam Hussein, radio dictator. As if they wanted to, they could
put a ham repeater in the middle of the FM broadcast band.
Silly rules about how to feed an FM translator on the FM broadcast
band (they don't like it if a phone line is used instead of a local
radio receiver to feed the audio to the transmitter). Okay, so
someone from the other end of the country doesn't feed it. But
who cares if the parent station owns the translator or not.

Other rules that look silly at first turn out to protect the ham bands
from being invaded by business users (the "no pecuniary interest"
rule.).

Better not be $8k here or they're gonna go over like the proverbial
lead balloon. Feature for feature the 7800 is direct competition for
the FT-1000MP MkV which sells for $2600-2800, they're almost twins in
most respects. Except that the 7800 can run 6M, has all-DSP rcvrs and
it has a "bandscope". Which in practice is about as useful as tits on
a bull. I do NOT like all-DSP rigs, xtal filters eat DSP filters alive
particularly when it comes to CW. Been there, you can have 'em.

> Makes the $1200 I am
> considering dropping on the K2 and options paltry!

Before you go down that path check out used FT-1000MPs which can be
had for $1500 and sometimes less. 200W out, two completely independent
gen'l coverage rcvrs, long list. These puppies are the standard big
gun dx contester's choice in these parts and money is no object with
this bunch. I'm headed for one eventually.

If that were true, then the bandwidth would have to be 3kHz.

Another candidate for "stereo-quality SSB?" :-)

If we can't even agree on this, that is an indication of the problem right there.

Perhaps, but we're also smart enough to recognize that no everyone is as
intelligent and that there is a high possibility of someone screwing this up.

As Leonard has lectured on numerous occasions, his only interest here is in civil debate on the removal of morse code testing. He is, as you are no doubt aware, a self-appointed advocate for the removal of morse testing and the elimination of licensing for children.

Those items aside, Len will launch random insults as the opportunity presents itself.

Leonard doesn't play well with others.

I am very sure you are quite familiar with Part 95, Lennie, in as much as
it is only one of two radio services in which you may LEGALLY operate a radio
transmitter.

10-4 Good Buddy?

>
>No, it is not.

Its changing the meaning of a word from what one expects (general competition)
to what Hams want it to mean (a SPECIFIC game activity).

By limiting to a specific activity, it limits other possibilities.

Thats almost Orwellian.

The subject matter on the test is very good, I must admit. Its balanced, comprehensive, relative to amateur radio.

The manner of the phrasings of the questions may not be. Many questions are very similar to others. Some are the same with the answer asked as a question. Others are easy to memorize by word association, so one does not have to know the material.

One can pass the test easily, often in 1 day, using these methods. This does not require learning the material.

Why do you insist on limiting the definition of contest to sports?? Every state fair in the country has contests in things like quilts, jams and jellies, size of vegetables, quality of cattle raised, etc. There are music contests throughout this country too. A contest is simply people trying to be better than the other people in the contest. It is not and never has been limited to sports.

Every activity does the same thing. People interested in autos have specific activities that they mean by a contest. The two that I am aware of are racing and the accuracy of restoring collectable vehicles to original condition. These are very specific.

>
> By limiting to a specific activity, it limits other possibilities.
>

No it doesn't. It's just that if you want to set up a contest, certain types of activities are more suitable for contesting than others. Thus the inherent nature of the activities available limit the types of contests that can be developed not the other way around.

Nor does the competition set up limit on a ham's activities outside of the contests.

How soon we forget.

In the late 1970s, shortly after the ascent of Charlie Ferris,
Tip O'Neill's bag carrier, as FCC Chairman, the "public
information and contact" mission of the FCC was expanded greatly.
Not only was every field office "blessed" by the addition of a
non-technical "public contact" person who had to be handled
with kid gloves lest she tell Washington that we weren't "with
the program", there was a position in Washington created to
rewrite the rules used by "the vast majority of people" into
"plain language" format.

The existing Part 95 Rules format and content resulted from
that. Then she tried that with the Amateur Radio Service
Rules. The entire spectrum of the amateur community from the
violently pro-ARRL hams to the violently anti-ARRL hams ganged
up on that idea and the project was dropped. It was called the
"Comic Book Rules" in the ham community.

Eventually the incumbent moved on and was not replaced, and
"plain lanmguage rules" in the ARS passed into history.

My wife, who has been an artist over 50 years even though she
is color blind (and her stuff -does- sell), was at the ARES/RACES
meeting where this came up. We were treated to a discourse on the
types of color-blindness and the color pairs that are best used in
such an application. She's researched the matter professionally
because she works as an electrical power and instrumentatsion
designer and has to specify such things.

>folks here...so what willit be?

1.5 puts a 3000 Hz baseband signal at the top of the channel,
and a 200 Hz baseband signal at the bottom of the channel.

1.4 puts a 2800 Hz baseband signal at the top of the channel,
and a 0 Hz baseband signal at the bottom of the channel.

I personally like the top-end headroom that 1.5 gives, because
the voice can and does have components between 2.8 and 3 kHz
whereas very little is found below 200 Hz.

What does the Bell standards say?

What is the expected cutoff of most if not all TX baseband
filters?

Gotta look at the performance specs before making that description. I dunno how they compare with the typical VHF/UHF ham rig.

> It used to be you bought a kit and saved money cuz
>you did the lion's share of the work.

That's because in those days a big part of the cost of a piece of electronic gear was the labor involved in building the dern things. Back in point-to-point wiring days, that meant a lot of hand labor. PC boards reduced that somewhat. Automated parts insertion and wave soldering reduced it still more. Surface mount technology reduced labor cost yet again. All at the price of serviceability at the component level.

Open up yer computer - each board and drive is essentially a component. Fixing a drive, card or even a motherboard is a rare thing - you toss a bad one and get another.

>Now you buy a kit and pay a premium for
>the "fun" you are going to have doing it!

Not really. You have to compare apples to apples. The K2's receiver and QSK performance are far above that of similarly-priced new HF rigs. Its power drain on receive, overall size and weight is a fraction of that of similar rigs. If those things are important to you, its price is not very high.

If you want a real test, download the parts list for a K2 and then add up the price to buy all of the components from the various distributors. Don't forget hardware, cabinet and PC board fabrication costs.

Let's see...

We have the seriously gold-plated IC-7800, at about that many dollars, the
wonderful Orion at somewhat less than half that price, the Elecraft kits
ranging from about $300 to $1500 depending on models and options. Plus lots of
other rigs in between, like the FT-897.

As W3RV points out, there's also no shortage of good clean high performance
used rigs like the FT-1000 and Omni 6.

Go back to the alleged "golden age of ham radio" (the '50s? '60s?), and a
top-of-the-line 100W HF station cost between $1000 and $2000. Which figures out
to about 8 or 10 times that much in today's money (if not more). And there
wasn't nearly as much selection back then.

Plus if somebody wants to run rigs from those days, they still can, in most
cases. An S-line or 4-line will still do a good job.

Why do I keep imagining Carly Simon singing "these are the good old days"?

>If that were true, then the bandwidth would have to be 3kHz.

Only if you want the audio to extend down to 0 Hz.

Let's do the math...

Suppose typical "SSB quality" audio covers 300-2700 Hz (bandwidth 2.4 kHz). The
'center' of that audio is 1500 Hz - 1200 Hz up from the lower limit of 300 Hz,
and 1200 down from the upper limit of 2700 Hz.

So if we have a USB signal with the above audio characteristics "centered" on,
say, 5200 kHz, the passband covers 5198.8 to 5201.2 kHz. And the suppressed
carrier frequency (which equals 0 Hz audio) is at 5198.5 kHz.

You're dating yourself...Bell standards have long since given way
to various telephone industry standards organization. Additionally,
today's tranmission for telephony is all digital other than the line from
your telephone to the central office ...and some of those are
digital too. Bottom line then for telephony is you get whatever you
can encode into a 64kb/sec bit stream.

> What is the expected cutoff of most if not all TX baseband

But we have only the Orion with specs similar to the IC-7800 which,
according to those writing it up on the TT reflector sells for in the
neighborhood of *10 grand*. The Orion, at $3300 is only six hundred
dollars more than the Omni VI price when new.

> As W3RV points out, there's also no shortage of good clean high performance

The selection didn't worry me any back in the sixties. I just didn't
know how'd I'd ever come up with that kind of money for ham radio in a
whole lifetime of saving.
>
> Plus if somebody wants to run rigs from those days, they still can, in most

Either can do much more than a good job. Receiver specs easily beat
most of the lower end offerings from Japan.

> Why do I keep imagining Carly Simon singing "these are the good old days"?

Give 'em twenty years and these WILL be someone's good old days.

> How do ya like Baby so far?

You may have to revise your crystal filter comments. The receiver is
the best I've ever heard anywhere. Of course there are some crystal
filters in the thing. The stock roofing filters are four pole units but
the 500 Hz optional roofing filter is a six pole job. The DSP filter
skirts are razor sharp and there's no ringing down to 100 Hz.
There are FOUR band stacking registers per band making it easy to set
one up for CW, SSB, AM, RTTY or whatever your favorites happen to be.
DSP noise reduction (nine levels) is phenomenal.

I've downloaded firmware updates twice since owning the Orion and was
delighted when some of my suggestions were implemented in the last
update.

Ooops -- another of my predictions on the future of ham radio apparently coming true! The FCC wants to pull a significant amount of our 5 GHz spectrum out from under us for more unlicensed Part 15 services. Oh, well -- it's not like us hams are actually USING this spectrum anyway, is it? How long will it be before they're looking at our 1.2 GHz specturm? Or 902 MHz? Or 440 MHz? Anyone feel the walls closing in?

73 de Larry, K3LT

****

ZCZC AG37
QST de W1AW
ARRL Bulletin 37 ARLB037
From ARRL Headquarters
Newington CT May 22, 2003
To all radio amateurs

SB QST ARL ARLB037
ARLB037 FCC Proposes Additional 5-GHz Spectrum for Unlicensed Use

The FCC has proposed making another 255 MHz of 5-GHz spectrum available for unlicensed use at 5.470 to 5.725 GHz. Amateur Radio has a secondary allocation at 5.650 to 5.925 GHz, which it shares mostly with government and nongovernment radars.

In a Notice of Proposed Rulemaking (NPRM) in ET Docket 03-122, approved May 15 but not yet released, the FCC suggested that the additional spectrum be made available for use by unlicensed National Information Infrastructure devices, including Radio Local Area Networks, operating under Part 15 of the FCC's rules.

The FCC's action comes in response to a petition for rule making from the Wi-Fi Alliance, formerly known as WECA. If implemented, Amateur Radio will be left with a 25-MHz segment--5.825 to 5.850 GHz--that's not already earmarked for unlicensed services. The FCC's proposal represents an 80% increase in the amount of 5-GHz spectrum that would become available to unlicensed devices.

The ARRL has opposed past WECA efforts to expand the 5 GHz franchise for unlicensed users. In comments to a 2002 petition, the League said WECA failed to establish any current need for additional spectrum and that the FCC may not be able to enforce rules against harmful interference to licensed users. The ARRL plans to comment on the latest NPRM once the full text has been released.

Hello there Bill ....
I really was never a big DXer but I did have about 260 plus countries on CW.
I just threw out all my QSL cards from over the last 30 plus years as that
was history. I am now going to sell my other gear and get exclusively on
QRP from the new QTH not because I have to but because I am ready for a new
"experience" I will be looking for you on the air there Bill ..

Sorry should have been clearer there Bob ... I was refering to some sort of mass catastrophy where all the support systems of our society would fall apart. No dropping CW wouldn't fit into my concerns at this level. There would be far greater concerns at this level than CW.

> >
> > You can require CW until the end of time, but if nobody's

> upgrading their licenses? How many people are _learning_ CW?

Good point Bob ...wish I knew hard and fast... I could counter with some impressive stats but I can't. The only thing I could say is that there are

plenty of ops out there on CW and that those who don't operate this mode are missing out on a good "chunk" whatever that is of operating fun.

> > I had a chat with a fellow on 2 meters one day on this same point. He

>
> Which indicates that the ARS is, (excepting the Technician class) at
> best, stagnant, if not actually declining.

Boy Bob you got a point there ...most techs I know out there are on 2 meters and STUCK...not by the class but by their own motivational level. I am not saying that CW is the where with all but I see little in my ham experience to see that the Techs that I know are learning new aspects of the service ...wish I was wrong .....

> spectrum) nobody ever asked me if I knew CW, or implied that knowing it was
> somehow beneficial to my ability to operate the equipment or run the shack,

> nor is it (or was) a prerequisite for any of the tech schools I went to.

Again how is this going to open the doors for CW ops if they don't know the basics ....it is true that you have operated all these modes according to your posts but have you operated CW in the ham bands ????

I give you my cudos on your accomplishments there Bob you are and have been involved in radio as a profession. There is absolutely no doubt that you could blow me out of the water in radio related matters. I however am in this service for a deversion from my profession. I hold a ticket ....big deal ...so do thousands of others. I wish you had a ham ticket as I am sure we would have a lot in commen to talk about.

Take care there Robert .... 73 God Bless KI3R Tom Popovic Port Vue Pa.

Mountains outta molehills again . . God bless RRAP . .

1. Get in the program and install a decent 2.1 Khz wide TX xtal filter
which is as as wide as is necessary for SSB and also conforms with the
reg requirement to occupy no more the maximum bandwidth needed to
carry out SSB voice comms.

2. Dial into the channel with the freq readout showing that yer ham
reddio is talking 1 Khz below the stated channel freq.

3. This would give you yer own personal 700 Hz wide "safety factor"
(+/- 350 Hz. guard bands, i.e., slop both up & down from indicated)

inside the alotted 2.8 Khz bandwidth to compensate for that one too
many 807s, crappy calibration, drift, whatever.

Thats not the point. My point was in Ham radio, a contest is limited to a specific contact chasing game. Other types of competitions are possible, but are not called contests in Ham radio.

Contesting is playing the contact chasing game, not any other competition.

The word contest has been defined to one specific activity, for Ham radio.

Hold tight Bob and it will go away according to what I have read and or
perceived over the last number of years. Will I bemoan the loss ...naw as
there are far greater "losses" in this world to bemoan that are really
significant. I will however look at this service with interest to see what
real positive changes come about. I am not being saricastic as I have a
....dare I say love for this service. It has directed me over the years to
a lot of interesting people and experiences whose absence would have
lessened my "story". You know Bob things would have been a LOT different if
my dad hadn't built that crystal set for me in 1956.

I am sorry about that.

Its nice that various age groups can get together in this groups activity.

Most of the clubs seem to be interested in those activities which I am less interested in - contesting, CW, antennas, etc.I wish Ham radio had more activities like the one I went to a short while ago.

Bill, what is the INPUT frequency bandwidth to the telco
A-to-D? That matters greatly to the conversion from analog
to digital. It also matters as greatly to the conversion from
digital to analog.

Please don't cop out by going off into digital land discussions.
Those don't apply to the brand-new 60m frequencies'
modulation.

>> What is the expected cutoff of most if not all TX baseband

You don't have to. Get a good audio generator, frequency
counter (if you need it), RF sampler and power meter, plus a

dummy load. Go through the procedure I gave in here before.

That's not rocket science, just rather ordinary metrology.

FCC 03-105 is still quite precise as to staying within a 2.8 KHz
bandwidth centered on the frequency given.

If you can't agree on English meanings for an R&O, how can
anyone expect you to "agree" on the other regulations in
Part 97?

IIRC yes for the 5 wpm code test. However, no credit for having
passed a faster code test. Seems some FCC bureaucrat didn't
understand that having passed a 13 or 20 wpm code test would
supersede a 5 wpm test. "Okay, you did 13, but can you do 5?"

NO credit for anything else. So you have to retest. Might as well
take the general and extra writtens at the VE session, cost no more,
and maybe you'll pass 'em. BTW, these only need 5 WPM code
nowadays.

> >can encode into a 64kb/sec bit stream.
>
> Bill, what is the INPUT frequency bandwidth to the telco
> A-to-D?

The input is whatever is present onthe cable pair. The analog signal
is then limited by the A to D conversion as a function of the sample
rate (8000 samples/sec usually). That leaves 8 bits per sample
to indicate the signal level (128 discrete points). The A to D conversion
thus theoretically allows a 4KHz bandwidth.

> That matters greatly to the conversion from analog

>
>73 de Larry, K3LT

The ARRL has put in place an incentive program for microwave freqs. Seems noone
is taking them up.

Back when I was an EE, I went to one club's repeater site.

At their club meeting, I told of my interest in electronics. They seemed like
there could be some activities. I contacted some people. Somehow, never
materialized. Something always came up.

Yet, Hams will take a day off and show up on Friday for a Hamfest. It seems
like its really a matter of priorities.

Generally Hams are nice people, but when I asked about the repeater, the person
was snobby, and said they had someone for that and that they didn't need my
input.

I bet if I said I wanted to learn CW, they would enthustically help me do that.

Please realize that I was courteous, both at the meeting and at the repeater
site when I made my requests.

At my local club, there was an EE there. He usually does not attend the
meetings. Anyway I asked him if I could work with him on some project. His
response was snobby also.

It seems the problem is that most Hams aren't interested and those that do
handle these aspects are too snobby to include others. Ham radio is driving
away those that can contribute and have technical interests and capabilities-
in favor of other activites.

That does not seem fair to those that made the effort to learn code.

>Seems some FCC bureaucrat didn't
>understand that having passed a 13 or 20 wpm code test would
>supersede a 5 wpm test. "Okay, you did 13, but can you do 5?"

Just because you can do 13wpm does NOT necessarily mean you can do 5 wpm. There is a condition where one can encode at a higher speed, but not at a lower speed. I have had that condition, on occasion.

Let's try that one again:

In many foreign countries, amateur radio contesting is referred
to as "radiosport".

Yup - that still reads that way.

>
>>Vippy, it seems, communicates in a variety of English which is
>> foreign to us American-speakers
>
>Please, my name is not "Vippy".

Let's try that one again:

Mister Shah seems to use his own language and concepts which
have only a passing resemblance to those used by the rest of us.

Yup - that still reads that way.

This story may not seem as far-fetched at first read or thought!
For several years there was a hamfest-gypsy-bum who
would set up at just about every hamfest in the NJ/Pa/Del/Md. area
and one of his trademarks was he would always swipe a
roll of Charmin from out of the men's room early on.
I am not kidding folks. This unwashed, slovenly, smelly sorry
assed excuse for a ham radio op would often camp out
the night before with his xyl in their beat up old van or car to
ostensibly get the good spot in the dealer's tailgate section.
He would go into the men's room wearing a tattered old coat into which he
had sewn
2 large pockets inside early in the morning. When nobody was
looking, in his coat would go 2 or three rolls of toilet paper, bar soap
or whatever else was available. (almost every dealer knew he did this)
It did not stop there either. He also would "raid" the condiments stand
if there were foil packs of ketchup, relish, pepper and salt. He'd then
go back to his grossly-overloaded vehicle and quickly hand off his
"booty" to his XYL or himself place it under the drivers seat.
(..glub forbid he stayed in a motel! One dealer who stayed in the next
room caught him walking out of the room with 6 towels and washcloths!)

Things soon caught up with the scumbag. He was banned from 2 hamfests
that I know of, and from one club meetings for life, when at a meeting he
tried his "dirty longcoat trick" to swipe 2 rolls from the men's room at
break time, followed by two 64 oz bottles of Pepsi, was caught, and launched
into a tirade of foul comments before he left.

I am sure hams in the Northeastern USA will probably know exactly of
whom I am speaking. His "longstanding reputation" goes back 20 yrs,
his house is a junkyard, complete with 2 derelict cars on blocks and
old electronic junk in piles in sheds on the side. (I know this as a friend
works for the town he lives in ahs has been cited on numerous times
for "unkempt property" and "hazardous stacked piles of recyclables".

Thankfully, he does not go to any more area club meetings or hamfests,
as nobody wants to sit near him because he bathes once a week, and
has also screwed several hams out of $$$ from junk he's sold as
"working" which was not, or had to wait several weeks to get items
shipped only to have their late refund checks bounce.

The archetype "Hamfest Bum". Thank glub as the hamfests (sadly)
disappear more and more, these types of slovenly people are also
going the way of the dinosaur.

(this guy was not at Dayton this year Randy, but from what I've seen
at some hamfests, he has lots of "company". tell the guys at the food
stand not to put too many condiment packages out, or better yet use
squeeze-bottles-on-a-rope so the cheap SOB Hams among us will
not pocket these also....)

Not to defend him, but one possible point he may be getting at that in a contest, use of some type of drug may give an opponent an unfair advantage. For example if someone who is on "speeders" or similar drug may be able to stay up considerably longer than someone who is not, therefore may have more opportunities to get more contacts. Whether this is a valid point or not, I am not going to take either side of it. Just a possible direction he may be going towards??

Terms of CW and morse are NOT interchangeable.... In a different manner, an "engine" and "motor" are not the same. The main device under the hood of your car or truck is an engine, but the item that spins up the blower fan for your climate control devices is a motor, or the device that turns the clothes dryer barrel is a motor. Not intechangeable.

>The FCC wants to pull a significant amount of our 5 GHz
>spectrum out from under us for more unlicensed Part 15 services.

TS. What do you mean "our spectrum," bubeh? Look again at who is primary and who is secondary before this little addition of 255 MHz for unlicensed RF devices.

Had you bothered to read the large print, FCC 03-105 gave US amateurs 2 whole MegaHertz as PRIMARY at the 2.4 GHz band. That's a spectrum chunk bigger than all of the 10m band.

>Oh,
>well -- it's not like us hams are actually USING this spectrum anyway, is
>it?

Have you EVER been above 440 MHz? In any radio?

Why do you care? You aren't in that spectrum area.

You stay down on HF as a "real ham" and work your DX with CW.

>How long will it be before they're looking at our 1.2 GHz specturm?
>Or 902 MHz? Or 440 MHz? Anyone feel the walls closing in?

Use it or lose it.

Look out for those BIG black helicopters, Larrah. They are hauling black bulldozers to tear down your conspiracy hut.

Everyone has had a year to comment on both NPRMs and there was more commentary action on the 5 GHz unlicensed devices. If you didn't comment, then what gives you a gold star for being such a Late observer of the regulatory scene?

TS. Then I suppose you will cop out of your responsibility
of measuring the RF quality of your radios' signals, too?
If that is in violation of FCC regulations you are responsible.
No one else, not the manufacturer, not the dealer. You as
the licensee are responsible.

Now if you feel that you "don't have to" make such
measurements, don't. You don't have to operate on those
five 60m frequencies, either. US Hams didn't have them before
14 May 2003 so it's not like something taken away from all of
you.

Why are there so many argumentative hams demanding things
in here? :-)

>Or 902 MHz? Or 440 MHz? Anyone feel the walls closing in?

Larry,

Where have you been? Reallocation is a fact of life. Been that way since "200 meters and down" was news.

Once upon a time there wasn't much demand for microwaves, and the available technologies were expensive and the results limited. So we hams got enormous allocations up there. Times have changed and technology has changed.

Because the radio spectrum is finite and is considered to be public property, its allocation to anybody must be constantly justified.

Here's an analogy - not perfet, but it illustrates the point.

Suppose there was a piece of land set aside by the govt. as a park. But very few people used it, because it was hard to reach, lacked certain facilities and there were closer, "better" parks. Would the govt. be wrong to change the park into, say, an area for oil exploration? Particularly when there's a big need for new oil sources?

No real surprise. It has been going on for years and no matter
how much spin the FCC spin doctors put on it, it is illegal and
unethical. As one poster mentioned not too long ago,
today's FCC is a culture of greed and personal gain. The
"What's in it for me" mentality is what drives today's FCC.
Look for increasingly larger scandals to come out of the FCC.
Next FCC scandal to be exposed will be massive fraud involving
official government credit cards. You heard it her first!

I don't know many who do. The great majority of hams I meet, on the
air or off, young or old, newcomers or oldtimers, aren't bitter at
all. They're too busy having fun.

> Because as you
> point out, we've never been able to pick up so much rig for our money.

Funny how things have reversed. 40-50 years ago, homes in a good
neighborhoods with unrestricted, large lots were common and not too
hard for the average worker to afford. A really nice rig, on the other
hand, was a lot of money, and the choices were relatively few. Today
the houses are expensive and the rigs aren't.

I say let the commercial interests have 5 GHz.

Really now, let's be honest. If there are a
grand total of 3 or 6 ham radio operators
in the whole of the USA who are
using 5 gHz once or twice for a
one minute QSO over the course of a Year
then we are very lucky. All we need
is 144, 220 and 440 MHz
FM voice and perhaps some
cw for the once-a-year contests.
Everything else is both esoteric
and likely beyond our present technological
needs and/or ability as hams.

Again, let us be straightforward here folks....y
You and I *both know* that today, in the world
of ham radio in the Year 2003, if you can't
buy the radio to get on the air, off the shelf,
made-in-Japan, and from Ham Radio
Outlet (for an outrageous price) the related
RF spectrum WILL NOT be used by Hams.
(except for perhaps the few or so in the whole
United States on a very erratic and itinerate basis)

Sorry but that is the truth, and our scant
usage of 5 GHz cannot justify our continued
spectrum allocation. It can, and will be better used
for consumer or commercial products/Industrial/Wireless
IP type applications.

> in six specific fields.

The Uniform CPA Examination is not published. IT is all M/C
with some OOF and essay questions. The essay questions appear
to be primarily for testing writing skills and not knowledge.
The OOF are tougher than one might think. So are the M/C. Typically,
You can take information from the paragraph and determine any one of
the choices to be correct. They all look correct under certain
circumstances or you just don't fully understand the concept. It
really is a tough examination.

The ARS is tough. I passed extra written examination. I know
someone that did and is not aware of take-off angles when I told
him to retain his vertical for transmitting. 5 wpm is not going
to prevent the memorizers from coming in. It is only stopping those
that are poor at code. I'm still plugging at it and I don't think
5 WPM is easy. It is not same 5 WPM that many had a long time ago.
I also think that they should require a sending test. The TPTB
should require you to zero beat a SSB signal and then zero beat a
CW signal as well.

> Or 902 MHz? Or 440 MHz? Anyone feel the walls closing in?

There's nothing new about any of it Larry. As Jim points out the
general practice goes back to the days when hams got tossed into the
"useless space" above 200 meters for the convenience of the
commecials. The ham bands have always served as "spectrum preserves"
for commercial and government users. i.e., they're "easy pickin's"
when new technologies come along like the current need to find a home
for what is being billed as the huge incoming wave of wideband Part 15
devices.

It's obvious as hell that the public interest will be far better
served by using that 5Ghz space for Part 15 ops vs. "saving it" for
ham purposes. WHAT ham purposes?? A few guys with horns on camera
tripods shooting at each other from mountaintops? 'Snot even a
discussion.

And yeah, the rest of the ham centimeter and millimeter bands are
under the same gun and we're going to lose even more space as time
goes by. Down the road when we find we're really in a pinch for
playpen space we'll be forced to wise up and implement better
technolgies ourselves. The current 1960's era spectrum-eating repeater
crap is gonna go. As an example.

The League will wave the flag and put up the usual cerimonial good
fight as usual. Snoozer.

Well, there you have it. No one knows what the actual story is. Since no tolerance

was specified, everyone will be off frequency except those who accidently happen to

own a crystal filter that has attributes that happen to land in the right spot.
And of course no one cares!

As I've said- Do you KNOW what the characteristics of your crystal filter are?

It is more accurate to specify the carrier frequency, then everyone would be on
frequency
and know that they are.

It's the natural progression of things, Larry. They only gave it to us
temporarily because no one else had any use for it. When that use is
developed, they withdraw it from ham use and award it to commercial use.
Been that way all along.

What happens when they get down to the much-used parts of our
allocations might get to be more interesting. Of course they'll encounter a
bit
more resistance at that point, but who knows the outcome?

Nah. I have two little "low end" HF rice boxes, a TS-50 and an FT-847.
I've compared the test results of both with the published test results
of the long-since deified meatball 75S-3B. This might come as a jolt
but with reference to important characteristics like front-end
performance the two rice boxes compare very favorably with the 75S3-B.
To the point of being peers in this respect. All three rcvrs have 110
dB. BDRs. The 200 Hz filter in the 75S-3B is probably the worst filter
I've ever used. Tried to use. The meatball only tunes 200 Khz segemnts
and it goes downhill from there. Donkey rcvr to the core by today's
reckonings.

. . . has to do with the proclivity we all have for looking behind us
with the rose-colored glasses. Until the lab reports pee on the parade
and impose the reality checks.

>
> Now I would like to get a license again.

Welcome back, Mike!

> Is it true that I get credit for the code test?

YES.

> Do I get credit for anything else that I passed?

Unfortunately, no.
>
> I still have the paperwork from the original testing.

Do you have your old license? That's the most definitive paperwork you
need.

The test 'elements' are defined as:

Element 1 - 5 wpm Morse code
Element 2 - Technician written (35 multiple-choice questions)
Element 3 - General written (35 multiple-choice questions)
Element 4 - Extra written (50 multiple-choice questions)

Technician license requires Element 2
General license requires Elements 1, 2 and 3
Extra license requires Elements 1, 2, 3, and 4

Here are the applicable regulations about element credit(FCC Part 97):

"ï¿½97.505 Element credit.

(a) The administering VEs must give credit as specified below to an
examinee holding any of the following license grants or license
documents:

(1) An unexpired (or expired but within the grace period for renewal)
FCC-granted Advanced Class operator license grant: Elements 1, 2, and
3.

(2) An unexpired (or expired but within the grace period for renewal)
FCC-granted General Class operator license grant: Elements 1, 2, and
3.

(3) An unexpired (or expired but within the grace period for renewal) FCC-granted Technician Plus Class operator (including a Technician Class operator license granted before February 14, 1991) license grant: Elements 1 and 2.

(4) An unexpired (or expired but within the grace period for renewal) FCC-granted Technician Class operator license grant: Element 2.

(5) An unexpired (or expired) FCC-granted Novice Class operator license grant: Element 1.

(6) A CSCE: Each element the CSCE indicates the examinee passed within the previous 365 days.

(7) An unexpired (or expired less than 5 years) FCC-issued commercial radiotelegraph operator license or permit: Element 1.

(8) An expired FCC-issued Technician Class operator license document granted before March 21, 1987: Element 3.

(9) An expired or unexpired FCC-issued Technician Class operator license document granted before February 14, 1991: Element 1."

(9) applies directly to you, Mike. All you need to do is pass the written exams. The Q&A pools and practice exams are online at several sites.

Good luck!

Could've been the FCC took the paper. I hear they're running short on paper
to print ham licenses.

Toilet Paper is plenty good ham licenses since restructuring took effect.

Did I miss something, or didn't FCC say that 5wpm code-credit-for-life was
accrued by former holders of the Novice class ONLY? There was some
chatter about this at the time, and if that FOX POX was ever corrected
I must have missed it. Seems that if one skipped the Novice and went straight to Tech Plus
he missed out.

Folks,

Interesting article recently appeared in a local paper:

http://www.philly.com/mld/philly/business/columnists/jeff_gelles/5832172.htm

The part that's relevant to amateur radio policy is Gelles' description of the FCC rulemaking process, and how secret it is. Yes, FCC puts out an NPRM and there's an easily-accessed comment system. But the FCC is not required to make its Report and Order match the corresponding NPRM in any way, no matter how detailed the NPRM is on a given subject. (And there's no requirement that the NPRM be detailed).

Perhaps this is one reason some citizens are so anti-FCC. The Commission can propose one thing but enact something completely different, without having to reopen the rulemaking process. Some folks might say it's like offering one thing for sale but then supplying something else after you place your order.

Thoughts, anyone?

No, it isn't. No sport is like another. But as a person who plays both hockey and participates in field day, I can tell you that I am more physically whipped after field day than after a game of hockey.

Let us compare contesting to say, driving a race car. The driver is just sitting there, and it doesn't take much strength to race. Endurance is another matter. While not necessarily taking the same amount of endurance as auto racing, there is a certain stamina required in a long contest.

Keep going to those activities, my man. If there is enough interest,
you'll be part of a group.

>>supersede a 5 wpm test. "Okay, you did 13, but can you do 5?"
>
>Just because you can do 13wpm does NOT necessarily mean you can do 5 wpm.

Sheeeesh...here we go again...

Yes, Vippy, you CAN copy Morse Code at 5 WPM if you can copy 13. It may bore the dickens out of you, but you can do it.

>There
>is a condition where one can encode at a higher speed, but not at a lower
>speed. I have had that condition, on occasion.

Then come to a VE session I participate in. I promise you that if you show me you can successfully copy 13 WPM, we will sign you off for the present Element 1.

(I won't hold my breath...)

We even have "preety fems" at OUR hamfests, Vippy.

For those who insist that Amateur Radio does not "play well" with the egghead types, here's yet another example of just how wrong they are.

Too bad Vippy and Lennie won't be able to participate...

Unless, of course, Lennie breaks down and does that "Extra Lite" thing he promised...?!?!

Once again truth and reality undo the assinine.....

QUOTE FROM ARRL WEBPAGE:

NARTE registers ham radio net: In association with ARRL, the National Association of Radio Telecommunications Engineers (NARTE) headquartered in Medway, Massachusetts, has registered an HF Amateur Radio Net--The NARTE Net. The NARTE Net will provide a forum for the common interests of ARRL members and NARTE-certified professionals, NARTE said in announcing the net. The NARTE Net meets Saturdays, 1700 UTC, and Sundays, 2100 UTC, on 18.140 MHz. "The NARTE Net is launched to further the mutual support of ARRL and NARTE in fostering technical awareness, educating and providing credentials to practitioners in amateur and commercial telecommunications," NARTE said. A worldwide, non-profit, professional organization, NARTE certifies professional engineers and technicians in the fields of telecommunications and unlicensed wireless systems installation. The ARRL and NARTE maintain a memorandum of understanding to support areas of mutual interest.

Mister Sadiq - I am a senior engineering specialist and regulatory counsel for a major engineering consulting firm in the field, whose VP of engineering is a member of several TISO committees, so I DO have knowledge of and access to modern standards. We also maintain a library of Bell System standards and BSTJs - one of the remaining few on the West Coast - as well as of current standards.

I asked about Bell Standards for a particular reason: Bill is a seasoned Bell Labs person and we can pull each other's chain (in jest, of course) over them.

In truth, the analog standards on voice characteristics (an analog process) haven't changed much over the last 30 years even though digital transmission has been common.

>something else after you place your order.

Not in the least, and thank goodness that the Commish'
occasionally realizes that what the petitioner proposed was bad
policy and should be changed. We have had a bunch of those in
the ARS over the years.

Anyone who disagrees with the "final outcom" has a whole
pack-full of remedies at hand: petition for reconsideration by
the issuing Bureau and if turned down by the Commission en banc,
and thence to the appellate courts if the objector can show that
the action causes personal harm. There have been several station
licensing cases (one that I am intimately familiar with) that have
kicked around between the FCC and the courts for over 30 years.

>Thoughts, anyone?

I noticed that in the specs. It's a hybrid which makes huge sense.
That takes it out of the "all DSP" category in a big way. I'm very
leery of the all-DSP rigs so far because I've had some not-so-hot
experiences with DSP but there is no doubt that the promise is there.
It hasn't been fulfilled in the particular radios I've used, not even
close so I'm in a "show me" frame of mind. I've attributed lousy DSP
to processing speeds which simply ain't high enough yet to compete
with, for instance, the shape factors of really good xtal filters like
those INRAD supplies. But once higher-speed chips become available . .
? We're in the 8086 days of ham DSP. Maybe even Z-80 days.

> The DSP filter
> skirts are razor sharp and there's no ringing down to 100 Hz.

. . So far so good . .

Boy that should save a lotta hassles for mode-hoppers. Me. I have a
terminal dose of menuitis, drives me nuts.

> DSP noise reduction (nine levels) is phenomenal.

There's a hot topic. There are apparently major differences in the
various rigs when it comes to the effectiveness of DSP noise blankers.
Been a lotta comments about DSP noise abatement implementations
ranging from superb to useless in the high-end rigs. Beats me.

> I've downloaded firmware updates twice since owning the Orion and was
> delighted when some of my suggestions were implemented in the last
> update.

That's truly slick. None of the JA radio builders offer any such capability. I don't think they will either unless it comes via CAT control software some of which is already available. But ya gotta be hooked to the 'puter to use 'em. Firmware updates are the right way to go. Small nimble U.S. outfits like TT and Elecraft can play this game very successfully but I don't see the JAs getting into it since they're remote, slow-moving corporate monoliths with much different priorities and mindsets.

OK now 'fess up David: What *warts* does the Orion have? Don't be silly and tell me it doesn't have any, all xcvrs have notable warts. There's lists of MP warts and their fixes out there and some of 'em can't be fixed.

Yep...and remember when Wayne Green of 73 magazine wanted to give away the top 2 megs of 2 meters (146-148) because hams didn't use it? (circa 1963 or so).

Then came FM and repeaters.

Double check the following with your local volunteer examiner team or call the ARRL. If your license expired, code is the only thing you can get credit for I believe. You would have to take the written exams again. However these days, the Technician class license only requires one written test as there are no new Novice licenses being tested for or issued.

While you are at it, study up and take your General since only the 5wpm code test is required for any class of license.

Tech Plus is included for the 5wpm code-credit-for-life. You just have to
be sure to have the documentation. But it must have actually been a Tech
Plus not the Tech with code credit of today. Some one who has received code
credit on the current Tech licenses can operate the attendant HF privileges
so long as their license doesn't lapse but for purposes of upgrading, the
credit only lasts one year.

Wow! You have more degrees than a thermometer and more
titles than the King of England! Which.....begs the question. Just
why DO you slum here with us low lifes? Do you enjoy the petty
bickering? Perhaps you would relate better to fellow elitists
in a professional forum? BTW, you date yourself again when
you use phrases like, "Pull your chain, pulling each others chain."
Phrases like that went out with the 50s, maybe early 60s.

What responsibility? Please point to the regs that require me
to make any specific measurements. The rules require
a signal within certain criteria. As long as my rig is within
spec I don't have to measure anything.

> If that is in violation of FCC regulations you are responsible.

> No one else, not the manufacturer, not the dealer. You as
> the licensee are responsible.

Agreed. That does not, however, require any periodic or
speciifc measurements to be made by me.

> Now if you feel that you "don't have to" make such
> measurements, don't.

I don't, nor do most hams with no ill effect.

> You don't have to operate on those
> five 60m frequencies, either.

Why should I not?

> US Hams didn't have them before
> 14 May 2003 so it's not like something taken away from all of

If there's a point you're making on that statement,
it eludes me.

> Why are there so many argumentative hams demanding things
> in here? :-)

Who's demanding anything. Some of us believe that rules and regulations
can be written with a level of clarity and in such a way as to avoid
confusion. That is something any documentation writer should strive
for.

Cheers,

I originally licensed in 1992. At one session, I passed the Novice written, Tech written, and 5 wpm. I was issued a Tech Plus license as a result. I never held a Novice license. The FCC was so slow that while I waited for my license (it took 3 months), I passed my General requirements. So my first on-air contact, I was a "Temporary AG."

In other words, a Tech Plus had to pass the Novice elements but did not have to have held a Novice license.

It's rather confusing to keep all the different licensing programs straight.

Hey, I'm glad I read about 3865 kHz on k1tp's web page.
The frequency is a riot!!!!! There's a mean drunk on there
every night using profanity & obscenity. He's so drunk he
can't string together two coherent words. Claims to have the
goods on everyone and hates Masons. Last night he passed
out, finally, about 11:30 pm. Then all kinds of people got on
the freq. talked about him and had a good time. Man, this
guy needs to be admitted to detox, the sooner the better!

True- for now. But the same was once true for 20 meters, not to mention 144, 220 and 440 MHz. FCC gave 11 meters to CB because no hi-power devices were available to draw ham interest at the time. I remember needing expensive "lighthouse" tubes to get 100 watts on 440. Now HRO will sell you a whole 100W amp for $339 and the band is so busy you might have to wait to get a repeater coordinated on it. The same will happen to the GHz bands sooner than you think.

OK, maybe not that far, but some people do have some resonant component of
their voice below 300 Hz.... Those people sometimes sound like "Mickey Mouse"
on answering machines and such, but not in person - because the bandwidth of
that device cuts off part of their vocalization. I assume NOTHING about the
signal because that really depends on its source of modulation.

A 2.8kHz bandwidth implies to me => 200Hz - 3kHz which is more reasonable.
That means moving 1.6kHz down from the center the FCC specified. Guess what -
ANOTHER adjustment factor! Bad regulation. Bad, bad FCC.

> > and a 200 Hz baseband signal at the bottom of the channel.

Actually, no it doesn't. The center of that range is 1600Hz, so one needs to
be 1.6kHz down to make that centered.

Adjusting by 1.5Khz means that 3kHz will be 1.5kHz above, but 200Hz will only
be 1.3kHz below. That's not symmetrical and therefore not centered.

> > 1.4 puts a 2800 Hz baseband signal at the top of the channel,
> > and a 0 Hz baseband signal at the bottom of the channel.

That one is at least centered.

> frequency
> and know that they are.

...Especially when someone else comes up and uses the entire 2.8kHz range. Their signal (let's say it passes 200Hz-3kHz) will have its center as 1600Hz. Your signal with your 2.4kHz bandpass filter wants a center of 1500Hz. Assuming both radios were perfect in their transmission characteristics, there's going to be a 100Hz shift between the transmitted and received audio due to just the different interpretation of the rule (not doppler or any other phenonomon) before bandpass clipping.

...So Donald Duck may end up sounding like Mickey Mouse.

If the rule were written with the suppressed carrier frequency in mind, we wouldn't have this issue.

Although the shift in question isn't going to be that significant, just the fact that it happens shows the bad authorship of the rule.

I thot all "Tech Plus's" had to be Novices first, if only briefly. I got my Novice by passing 5WPM then a written test, both administrated by a General at a local club; then my Tech by passing the General written exam at an FCC office a week or so later (ie, there was no "Tech" exam per se). IIRC, I became a "Tech Plus" when FCC invented a seperate Tech exam.

Plus he missed out.

No, you didn't miss.

Note that only elements 1 and 3 can be granted from former, expired licenses
NOT within the grace period, but as for which licenses, not all classes
qualify.

Element 1: Only a Novice or Pre-1991 Technician license counts.
Element 3: Only a pre-March 21, 1987 Technician license counts.

Other licenses, if they remained valid or were in the grace period, can carry
these elements. However, element credit not being given for licenses beyond
the grace period is more of a punishment.

Moral: Don't let your license expire. Renew it even if you aren't active.

I have a reasonable expectation that my rig
does what the manufacturer states in the
documentation. If it turns out otherwise, then
I accept the responsibility.

Do you really think any significant percentage
of hams today...or at any time for that matter,
made periodic measurements of their commercial
equipment's signal? For many, an "on-the-air"
QSO with another ham will give sufficient
indication via the other ham's assessment of what
s/he hears as to the quality of the signal.

The above has been the norm for decades within amateur radio
with no ill effects or otherwise wholesale indication that
individual rigs are not performing within part 97
rules.

Cheers,
Bill K2UNK

Yup.

Today that house costs $250-350,000 or more. How much does the engineer make?

I recall that when I started work in the design office of Undisclosed Corporation, (1977), my design group leader told me that when he had started there (about 1962?) one of his goals was to make $10,000 per year before taxes. He figured that $10K was "Easy Street" - and it was, back then.

Seems to me that one of the big changes in economic life today is that the prices of many of the essentials (housing, cars, insurance, education) have risen faster than wages, while many "luxuries" have risen slower than inflation.

DOH!

Of course!

>...unless they all suddenly upgrade.
>
Or the rules change.

ARRL was trying to avoid all this by proposing instant upgrades/grandfathering
of existing Tech Pluses and Novices to General. Problem was, such a plan would
have opened a neat loophole because there has to be some time between an R&O
and its implementation - in the case of 98-143, it was almost 4 months.

>
>Other licenses, if they remained valid or were in the grace period, can carry
>these elements. However, element credit not being given for licenses beyond
>the grace period is more of a punishment.

Yup. Which means that somebody with a long-expired Technician (as far back as
1951) can get a General without any testing. But someone who bypassed Novice
and Tech, and went straight to General, Advanced or Extra, gets no credit at
all if the license is beyond the grace period.
>
>Moral: Don't let your license expire. Renew it even if you aren't active.

Good advice! With 10 year license terms and a 90 day renewal window, it's easy
to miss the boat, though. OTOH, you can renew online or download and print out
the necessary form and instructions with no fuss.

I remember times when you could renew any time the license was also modified -
say, for an address change. Not so anymore! The only way to get a renewal
outside the 90 day window is to go for a vanity call.

>for what is being billed as the huge incoming wave of wideband Part 15
>devices.

'zactly. btw, most of our microwave allocations date from 1946, with various modifications over the years. Those bands aren't exactly new - there were 10 gig radar systems in WW2.

>It's obvious as hell that the public interest will be far better
>served by using that 5Ghz space for Part 15 ops vs. "saving it" for
>ham purposes. WHAT ham purposes?? A few guys with horns on camera
>tripods shooting at each other from mountaintops? 'Snot even a
>discussion.

There ARE ham uses for the microwaves, like control links, satellites and even EME. But IMHO, we'd be better off with a few MHz of exclusive amateur spectrum than many MHz of shared space.

>And yeah, the rest of the ham centimeter and millimeter bands are
>under the same gun and we're going to lose even more space as time
>goes by. Down the road when we find we're really in a pinch for
>playpen space we'll be forced to wise up and implement better
>technolgies ourselves. The current 1960's era spectrum-eating repeater
>crap is gonna go. As an example.

Which brings up another point: The proliferation of bands has its downside - dilution of the user base. There are only so many hams interested in any one band, and the more bands there are, the more fragmented things become.

>
>The League will wave the flag and put up the usual cerimonial good
>fight as usual. Snoozer.

Maybe not. If the end result is some exclusive-amateur spectrum rather than massive sharing with other users.

>shoved Incentive Licensing down our throats.
>
I don't see how the ARRL was in cahoots with FCC, Dan. The League and others actually got the FCC to tone down some of the harsher aspects of IL, like demoting all Advanceds to Generals, as was proposed by FCC. And the original ARRL proposal (1963) was very simple.

And the story really begins about 1949, when FCC started talking about restructuring the old ABC system. That resulted in a system where hams who did not have an Advanced by the end of 1952 would have needed an Extra to operate 'phone on the HF ham bands below 25 MHz. (160 is MF, not HF).

But then FCC did a complete about-face and opened up all privileges to all hams except Techs and Novices.

So the whole IL mess of the '60s was actually a rethinking of that last-minute end-of-1952 decision. btw, the whole subband-by-license-class thing did not come from either FCC or ARRL.

Now we're back to one code test speed and three license classes - just like before the 1951 restructuring. Go figure.

A distinction that is blurring in common use, just like "kleenex" as a general
reference to tissues, "xerox" to photostatic copying and "cokes" as a general
reference to carbonated soft drinks.

Bit of railroad trivia....

For quite some years the Pennsylvania Railroad referred to steam and
diesel-electric locomotives as "engines" and referred to electric locomotives
(third-rail or overhead wire) as "motors".

In 1961 I passed the General. At that time it gave me ALL HF PRIVLIDGES.
In 1968 I was told I had to upgrade to "EXTRA" to get the same privlidges.
That was not right and as far as I'm concerned is the main problems with
Amateur Radio today. A class system has been imposed.

No, by taking the General written (later the Tech written when it was split from the General) along with the
5wpm code test one could to straigt to Tech (or Tech Plus after it was created). In this case the applicant
nevver was issued a Novice license although of course he qualified for one. If I racall the correctly the order
said that anyone who had eer held a NOice license could claim lifetime code credit, but strangely no other class
had that privilege. Maybe they came to their senses and corrected that error.

Dang, who cares? I dropped my tickets around 1982. Had my extra, 1st phone, and 2nd telegraph. Decided to get back into it in 1993. Just took the tests. All of 'em. No study. You can do the same. Difference is that the max code test is now 5 WPM. Not so in 1993 (although multiple guess made it easy :)

And that, Bill is the reason I've been protesting the channelization of the new 60 meter allocation. It sidesteps a hundred years of amateur practice and substitutes commercial criteria.

My General/Conditional went back to '57. So when I went in to get back the spectrum we lost due to incentive licensing, I had to take every test except the Novice since Conditional licenses carried no credit for advancement. I saw no problem with it other than the 260-miles-each-way drive to the FCC office that made an overnight stay necessary.

But it gives you something to gripe about! :-)

I sweat off ten pounds of water in a typical game. So don't go telling me that I don't put much effort into my hockey. As the captain of my team, I can have guests play on occasion. Since you have hockey experience, I'm inviting you to stop in and play a game with us. Then you can decide if you think I'm dogging it. What position d'ya like?

On field day weekend, I participate in raising two large tents, three portable towers, a couple masts, some 80 meter dipoles, then move and set up tables and rigs. Then I catch a couple hours sleep, and work the next day with the GOTA station. Then after the newbies head home, I man an overnight station. Around 7 a.m. or so, I catch two more hours sleep, and then do GOTA again until the end of FD. After that, I help tear down all the above mentioned stuff, and put them back into storage. Work hard, play hard.

The caloric output is immense.

Can we then assume that by April 2016 (1951-1968 = 16 years)
that FCC will have by then realized the error of their predecessors' ways, and
have by then reinstated all six licenses classes, with a 20wpm code test for
Extra? :-)

I have no problem with channelized frequency assignments for
this 60m "special purpose" set of amateur assignments. In fact,
if done properly to avoid the obvious uncertainty as to what one's
sup. carrier setting should be, the channelized 60m makes much
```

sense over a "band" where internal agreements would then be needed as to what channel/frequency should be used for any specific emergency.

The thing I still don't understand is why the vast amount of Advanced hams
didn't
take the opportunity to pass the old Extra written and then just wait for
the
April implementation date of the R&O. The pre-implementation Extra
test was, on the whole, pretty lame. To move up today, the Advanced
needs to "study" the entire scope of material found on the old Advanced
and Extra.

You are assuming two things: (1) that there will be an amateur
radio service still in existence, and (2) that the government
will not have privatized the whole shebang to RCA which will
have risen from the ashes like the foo-bird.

I know better than to predict what the FCC will do tomorrow,
let alone 16 years from now.

I agree, for emergency communications it is well suited. And the 5 discrete frequencies are not all that useful for much more than that. We got the bare minimum requested-a 5mhz allocation to use for emergency comms when propagation is unusable on 3 and 7 mhz. But the "center frequency" spec and USB only are a bit out of range for ham radio, tho it's understandable since the Feds insist on full control .

Seems likely that all this concern with holding onto all possible spectum for homeland security use will fade with time as needs become clear
.
So where's all that vaunted hi-tech Uncle Sam comms that you guys have been raving about? The stuff that was completely secure, spread spectrum bulletproof and interference immune?

And here's the follow-on info in the ARRL Letter

- - - - - - - - -

The NTIA says that hams planning to operate on 60 meters "must assure that their signal is transmitted on the channel center frequency." In general, the NTIA has advised, users should set their carrier frequency 1.5 kHz lower than the channel center frequency. According to the NTIA:

Channel Center Amateur Tuning Frequency
5332 kHz 5330.5 kHz
5348 kHz 5346.5 kHz
5368 kHz 5366.5 kHz
5373 kHz 5371.5 kHz
5405 kHz (common US/UK) 5403.5 kHz

ARRL Technical Relations Manager Paul Rinaldo, W4RI, says the assignment of these channels implies that amateurs now must adhere to certain frequency tolerances for their use. While the international Radio Regulations don't list these for the Amateur Service, he notes, they do stipulate tolerances on the order of 20 to 50 Hz for other services.

"We haven't been told anything specific about frequency tolerances for these channels but would probably annoy federal regulators if we strayed any more than 50 Hz from the assigned carrier frequencies," Rinaldo cautioned.

Keeping one's audio within the 2.8-kHz wide channel to comply with the 2K8J3E emission specification is another important issue. ARRL Laboratory Manager Ed Hare, W1RFI, believes prudence calls for not having baseband audio below 200 Hz nor greater than 2800 Hz--for a total bandwidth of 2.6 kHz. "That will probably keep us out of trouble," he said. Noting that the high-frequency response "can vary a lot from radio to radio," however, Hare recommended that amateurs play it conservatively.

Additionally, the FCC has restricted operation to USB only, with a maximum effective radiated power (ERP) of 50 W. The USB-only requirement stemmed from NTIA interoperability concerns. The NTIA wanted to make sure that federal users could copy and, if necessary, identify any amateur station using one of the 60-meter channels. As a result, the 60-meter frequencies

will become the only ones available to the general amateur community that do not permit CW operation.

For the sake of this particular grant, the FCC said it would consider a half-wave dipole to have a gain of 0 dBd. In its letter to the FCC, the NTIA stipulated that radiated power should not exceed "the equivalent of 50 W PEP transmitter output power into an antenna with a gain of 0 dBd."

"Although this is less spectrum than the American Radio Relay League petition requested, this is the best we can do pending a definition of Homeland Security HF requirements," concluded Fredrick R. Wentland in the NTIA's letter to the FCC's OET.

Sumner has predicted that, over time, amateurs can and will "develop a record of disciplined, responsible use of the five channels in the public interest that will justify another look at these rather severe initial restrictions."

Just when amateurs will get their first crack at 60 meters is not yet clear. The changes to Part 97 go into effect 30 days after publication of the Report and Order (R&O) in The Federal Register, which has not yet happened. Publication could take anywhere from a few weeks to a few months. ARRL will announce a specific date as soon as it's known.

The FCC Report and Order in ET Docket 02-98 is available on the FCC's Web site <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-105A1.doc>.

But there weren't any hams during WW2. Heh.

I think it's fair to state that given a lack of commercial interest
above some arbitrary high freq limit the freqs above that limit
historically got designated "ham and experimental" simply to fill in
the high end of the allocation charts. Bureuacrats can't deal with
open-ended charts.

> > There ARE ham uses for the microwaves, like control links, satellites and even
> > EME. But IMHO, we'd be better off with a few MHz of exclusive amateur spectrum
> > than many MHz of shared space.

Right now we have 59 Mhz available from 222 thru 928 Mhz alone and
another 60 Mhz available just above in the 1240-1300 band. 89 frigging
Mhz! Three times as much space as DC to 30Mhz. Izzat enough "elbow
room" for ham ops??

Most of it is shared however but mostly with government stations which apparently are not much of a problem in either direction. But there probably would be a big problem if Part 15 widgets landed in those spaces so you know the gummint will be loathe to share their nav and space comms freqs with the wireless modem mobs. In this sense our sharing status in those bands protects us from the commercials. Thankew Big Brother.

So I dunno if we'd wind up better off trading what we now have for less but 100% exclusive space or not.

> >And yeah, the rest of the ham centimeter and millimeter bands are

> band, and the more bands there are, the more fragmented things become.

Nobody much cares about 222-225 except for some utility ops like repeater links. The few repeaters around here in the band are normally dead 99.999% of the time even in this obscenly high population density area.

440 cooks (everything being relative) around here but not to the extent that a good case could be made to justify the need for the 30 Mhz worth of space we have in this band.

I don't know anynody or know of anybody around here who actually operate on 902-928 or 1240-1300. I'm utterly clueless about any ham activity in the rest of the microwave ham bands beyond what I read here and there, mostly in QST.

I haven't seen any "proliferation" effect so far and the equipment and allocations have been available for eons. I suspect that the only reason the equipment is available is because it is used in Japan in enough volume to justify production.

In general we been clumping on two for a half century and I for one don't see any new forces in play which would disperse us into the higher bands.

> >The League will wave the flag and put up the usual cerimonial good
> >fight as usual. Snoozer.
>
> Maybe not. If the end result is some exclusive-amateur spectrum rather than
> massive sharing with other users.

That might make some sense but I can't imagine the League telling the FCC "Look, if you give us exclusive use of (whatever lesser space) we'll cheerfully give up our claims to (whatever the League proposes

the tradeoffs should be). It ain't in the ARRL culture, it just ain't, they couldn't say it, they'd choke on it. They don't act, the FCC acts then the League coils up in a defensive position and throws Imlay at the FCC.

You were already pasted on this one in a previous incarnation. If
you've had the condition, you learned morse code on the sly and didn't
bother to tell us. You'll be the first to have this particular
"condition" where you can copy 13 wpm and not 5 wpm.

Maybe you need to work on new trolling materials.

Not My Problem, Steve.

The point of this whole economic discussion comes down to things like this:

Is a family with, say, a $50,000 annual income today better off financially than one with a $5,000 annual income 40-50 years ago?

If not, how much is needed to reach parity with the past?

How many and what type of jobs are needed to reach that level?

Ham rigs are inexpensive but the houses to put them in aren't.

Ah yes, but what of the third order intercept points? What about the
noise floor? What happens if you activate the noise blanker? Arno
OH7XM (see below) brought his TS-50 to Botswana. You should have seen
the thing fold up when hooked to a 2 element 40m beam. It sounded
pretty good when a dipole was connected.

The 200 Hz filter in the 75S-3B is probably the worst filter
> I've ever used. Tried to use. The meatball only tunes 200 Khz segemnts

> and impose the reality checks.

OH7XM is a fellow who does factory repair of Icom, Yaesu and Kenwood
equipment in Finland. In '97 he came to my place with a calibrated test
oscillator to run some comparative measurements on my Omni VI and his
TS-870 along with OH2MM's FT-1000MP. The Omni VI held its own but did
show some filter leakage. For grins, Arno hooked the oscillator to my
KWM-2A. It blew the other rigs away. Yes, you had to tune it up. Yes,
it had those 200 KHz segments and yes, it had a tighter receiver.

Of course when you mention the C-Line, I assume that the words "Sherwood modified" preceed it. That stuff is *still* competitive.

No, thats not what happened. The person gave me his email. I was courteous and
didn't hear back from him. Yet somehow certain things get done. I guess you
must be in the Ham "click" to be involved in these things. Also, another person
said he will contact me if something else interesting comes up. I have not
heard from him again. That was a while ago.

For one thing, I never asked anyone to take a day off from work.

Take a day off for a Hamfest to go and buy stuff, when that stuff is available
on Saturday also? Thats sounds intelligent. Oh, and Hamfests are really fun
too.

>> Generally Hams are nice people, but when I asked about the repeater, the

Actually, that could be the club's activities instead. So what if someone is
already handling it? I believed, with thier different facilities, this club
would be different. But, it was not.

>Maybe you believed you were being courteous. Maybe some folks there
>thought you were being pushy.

No, thats not what happened.

>It had to be rough, being rejected by radio amateurs AND EE's.

At least that EE was smart enough not to attend the meetings, unlike myself (now former EE). He probably didn't know I was an EE and assumed I was a typical Ham like everyone else at the meeting. In that case, he was making an assumption that Hams are generally non technical. In that case, he was right to be snobby.

Also, I was offered a project from one Prof of the classes I took, so I think it has more to do with Ham radio than EEs. Obviously, I didn't take that offer, or I could still be considered an EE.

>> It seems the problem is that most Hams aren't interested and those that do

>
>Aren't interested in what? They aren't interested in what YOU want them
>to be interested in? The self-centered bastards!

Yes, its frustrating. Ham radio is a culture. Hams like to only do certain aspects of the hobby.

Also, at the gathering I joined a few weeks ago, I wanted to take a break, but the host urged me to operate radios and make contacts.

Well Jim I dont know if Im older, I'll be 57 in July.
As stated got my Novice in summer of 61, upgraded to General 3 months
later.

By the time I got back from the military in 1968 the whole ham radio world
had changed. I didn't bother upgrading till the mid 70s because I was back
in the military and the General was all I needed to operate in Germany.

Go to

www.mostannoyingwebpage.com

When they ask you about a subject to talk about (if you are not annoyed too much and got that far), chose Ham radio.

>spec I don't have to measure anything.

The question is "how do you KNOW it is within spec?"

Laying-on of hands is not sufficient.

If someone in a QSO says "your signal is good" that isn't
a qualifier on frequency or filter bandpass or much of
anything else. A "599" signal report is commonly heard
but it isn't really that good everywhere all the time, is it? :-)

In Subpart D of Part 97 (all paragraphs of 97.3nn) there is
nothing about "measurement" but there are a whole heap
of "shalls" on signal emission. Each one of those "shall"
statements applies to the individual licensee. The FCC
gives all licensees considerable latitude on HOW they do
their "shall" thing but the bottom line is that each licensee
SHALL be within technical standards.

>> No one else, not the manufacturer, not the dealer. You as
>> the licensee are responsible.
>
>Agreed. That does not, however, require any periodic or
>speciifc measurements to be made by me.

So...you have NO way of knowing if you are operating
responsibly as to technical characteristics of your RF
emissions?

Not acceptible in a technical activity, Bill. The law is the
law and Phil just recently reminded everyone that "ignorance
is not an excuse."

Note: I left out a word in quoting Phil deliberately. If you have
no referencible data on your RF emissions, then you are
ignorant of the technical characteristics of your RF emissions.
That can be argued in a court as being synonymous with
"ignorance of the law." In the amateur radio situation, part of
the law applying to licensees IS technical.

>> Now if you feel that you "don't have to" make such
>> measurements, don't.
>
>I don't, nor do most hams with no ill effect.

Rhetorical statement, Bill. "Most hams" would refer to at least
320 thousand (give or take). I don't think you or anyone else
in here "know" that many people. :-)

FCC 03-105 give US amateurs five micro-bands, each with less
than 3 KHz bandwidth. That is tight with a capital T. In order to
operate there legally, it would take some measurements of
several parts of an amateur transmitter to insure compliance
with the law.

>> You don't have to operate on those
>> five 60m frequencies, either.
>
>Why should I not?

That's up to you. If you violate the law concerning 60m
operation for any reason, you can't claim any "ignorance"
as an excuse.

>> US Hams didn't have them before
>> 14 May 2003 so it's not like something taken away from all of
>> you.
>
>If there's a point you're making on that statement,
>it eludes me.

Really? :-)

US radio amateurs had 9 bands below 30 MHz on 13 May 2003
with a total bandwidth of 2.75 MHz. FCC 03-105 added 14 KHz
to that total bandwidth, an increase of 0.5%.

Seems like there's a whole heap of bitching, moaning, whining,
ranting, shouting about that half-percent increase. :-)

>> Why are there so many argumentative hams demanding things
>> in here? :-)
>
>Who's demanding anything. Some of us believe that rules and regulations
>can be written with a level of clarity and in such a way as to avoid
>confusion. That is something any documentation writer should strive
>for.

Well then, just address your complaints to the FCC. You have
their address. Come to think of it, you were there at least once.
:-)

>
> Ah yes, but what of the third order intercept points?

I'd have to go back out and find the numbers and they're not easy to
find for the Collins gear at this late date. If I have it right at 20
Khz spacing the Collins had an ~8-10 dB advantage over the rice boxes,
less than 10%.

> What about the
> noise floor?

No idea.

> What happens if you activate the noise blanker?

Noise gets clobbered by the TS-50 NB, it's a mobile rig. I don't have
enough mileage on the FT-847 yet to test it's NB but the reviews give
it a passing grade.

I'm not claiming that the TS50 at $550 and the FT-847 at $1200 are any
kinda "super radios", They're not, they're low-end
acceptable-performing rigs for casual, backup & portable ops. Which I
why I bought 'em. What I do claim however, which is my point is that
if I had the TS-50 in the '60s instead of the Drake & Collins gear I
had then I don't think I would have missed many if any contacts which
I made then as a result of TS-50 strong signal handling problems. The
jury is still out on the FT-847 but I'm not expecting miracles.

> Arno
> OH7XM (see below) brought his TS-50 to Botswana. You should have seen
> the thing fold up when hooked to a 2 element 40m beam. It sounded

No surprise at all, the TS-50 seems to be particularly sensitive and
it's BDRs are only in the 110 dB range. I can jam the TS-50 front end

on 40 with a twist of a wrist. I almost always run it on the low bands
with the attenuator cranked in.

Depends on which of the progression of mods are incorporated. In the
extreme version there isn't a tube left in the signal-handling path.
Yeah, they're the ultimate 160/80/40 rcvrs but I can't get that
serious about a rcvr these days.

I've never operated CW _anywhere_, I have no interest in it, no
desire to learn it, couldn't possibly care less about it. That's just me,
though.

> I give you my cudos on your accomplishments there Bob you are and have
been

Oh, not necessarily! ;) My highest proficiency is (well, _was_)
probably in operating under adverse field conditions, more than
tech/engineering. Not to mention what I've forgotten over the
years...anyway, I'm more of an operational guy, myself. I looked at all the
electronic whiz-bang gadgets as tools to accomplish a task more than
anything else. (But the government gives ya a lovely set of toys, err,
tools, I'll give 'em that.)

> I however am in
> this service for a deversion from my profession. I hold a ticket ....big

My station identification is KG4ZXM, actually. The main reason I
decided to dabble more seriously, recently, is to do some sort of community
service - there's no ARES or RACES in my county, so I just might have start
it up myself. Of course, you won't find me operating any lower than 6
meters.....;)

Let's see - something like 15% of Advanceds have either let the license expire
or upgraded to Extra since May of 2000. Maybe 20% if we use AH0A data for
end-of-March 2000 as the reference point. Amazing.

>The pre-implementation Extra
>test was, on the whole, pretty lame.

I don't think it was that lame at all. YMMV

>To move up today, the Advanced
>needs to "study" the entire scope of material found on the old Advanced
>and Extra.

Not gonna go there, Bill!

But your observation still has lots to think about. If someone thought the old
Extra was easier, then the thing to do was take it before April 15, 2000, and
use the CSCE after that date. If someone the old Extra was harder, the thing to
do was take the new test soon after April 15 2000.

But it's been over three years.....

Some possibilities:

1) Lots of Advanceds don't care about getting an Extra
2) Lots of Advanceds are inactive (SK being the extreme case)
3) Lots of Advanceds haven't gotten the word yet.

Thoughts?

Back in Jan 2000, I took the old advanced and old extra elements.
IIRC I missed a total of 3 questions. Having a BSEE degree
helps some, also like any other reasonably competent student
I studied for these tests with the on line resources (question
pools). Then cashed in the CSCE's along with my pre '87
tech plus that April 15th and got my "extra lite" :-)
Did it partly to "lock in" my code credit, and getting HF
privs was nice too. Nowadays most of my operating is
on HF.

Phil was a federal bureaucrat for many years, so it is not surprising that he is an apologist for the FCC. And even less surprising that his politics gravitate to a very liberal big government view of things. Lets put it this way, I bet a dollar that Phil is no fan of Rush Limbaugh.

Possible crude test (to identify gross trouble only): Find a ham friend
nearby who has
one of those modern rigs with the spectrum display. Both of you tune in
to say an
empty freq on 80 or 40m, and do a test transmission. Make "white noise" by
blowing at your mic. Have him take a look at the width of your signal.
Also do
a test in AM mode (so your carrier shows up on his display) so he knows
where
your suppressed carrier really is. If the 10dB down skirts of your
signal don't
exceed say 2.8KHz you should be acceptable. And 2.6KHz 3 dB down.
From 200 to 2800Hz.

If his rig can capture and store the spectral pattern, have him do that
so you can see
what he saw.

The USB only makes sense because ham rigs all pretty much
have that capability. The center frequency I agree is poor
verbige for the reg itself given the purpose and the specific
service (i.e. Amateur Service).

Maybe
> you WON'T have a problem...but then again...

Bad anaology. The "odds" of having a problem for the unprotected
sex act are far higher than any odds that my Kenwood rig is suddently
going to put out a bad signal and even less likly that if the
Kenwood started doing so, that another ham at the other end of the
QSO wouldn't notice it and tell me.

> Steve, K4CAP

Whatever floats your boat. If that's something
you wish to do, you are certainly free to do so.
Is that something I am mandated to do by any specific Part 97
rule? Not at all.

Cheers,
Bill K2UNK

>
> The question is "how do you KNOW it is within spec?"

Because the manufacturer built it to those specs and, there
has not been any long term empirical evidence that suggests
I should be concerned. Do you have your auto speedometer
calibrated or do you believe it will stay pretty
accurate for the life of the vehicle.

> Laying-on of hands is not sufficient.

It is for me and there's NO FCC rule requiring otherwise.

> If someone in a QSO says "your signal is good" that isn't
> a qualifier on frequency or filter bandpass or much of
> anything else. A "599" signal report is commonly heard
> but it isn't really that good everywhere all the time, is it? :-)

If my frequency is not where I should be I think the
other ham would know that. As to my filter bandpass,
I think if I was spitting out a 6KHz SSB signal that someone would likly
notice. The reality is that commercial ham rigs have an excellent
track record of doing what they are supposed to with zero maintenace.

The same ZERO maintenance is today widespread throughout
the telecommunications industry. Why? Because we have found that
today's equipment is rock stable and that doing "periodic" maintence
measurements causes more problems than it finds. The same
is true for the vast array of consumer products.

> In Subpart D of Part 97 (all paragraphs of 97.3nn) there is

> statements applies to the individual licensee. The FCC
> gives all licensees considerable latitude on HOW they do
> their "shall" thing but the bottom line is that each licensee
> SHALL be within technical standards.

Your point? The fact is, that there is NO rule that mandates
I measure anything. I am responsible for my signal and I accept that.
What's the worst thing that could happen? I get a note from
the FCC telling me that my signal was out of band, that I had too
broad a signal, etc? In the old tube days with simple VFO's
that happened far more than with today's digitally programed
rigs. 30 years ago what happen could afford a frequency
counter? Accuracy today is incredible when compared to
the 50s/60s.

> >> No one else, not the manufacturer, not the dealer. You as

> emissions?

Nor does over 90% of licensed hams.

> Not acceptible in a technical activity, Bill. The law is the
> law and Phil just recently reminded everyone that "ignorance
> is not an excuse."

The law sez I am responsible for my signal. The law does
not proscribe any specific measurments, calibration or
testing I must do to be a ham. Again, I accept the
responsibility for my signal and operate as I see fit.

> Note: I left out a word in quoting Phil deliberately. If you have
> no referencible data on your RF emissions, then you are
> ignorant of the technical characteristics of your RF emissions.

I do NOT need to measure my actual signal to be confident that
my signal meets specs. Do you measure your microwave
to be sure it isn't eminating RF beyond the specs permitted
for such devices (be the specs mandated by FCC, OSHA or whatever)?

> That can be argued in a court as being synonymous with
> "ignorance of the law." In the amateur radio situation, part of
> the law applying to licensees IS technical.

I have consistently stated and accept responsibility
for my signal. What don't you understand about that.

> >> Now if you feel that you "don't have to" make such
> >> measurements, don't.

I know enough about the cross section of amateur demographics
to believe that few hams have the test equipment you would expect
to use to verify compliance.

> FCC 03-105 give US amateurs five micro-bands, each with less
> than 3 KHz bandwidth. That is tight with a capital T. In order to
> operate there legally, it would take some measurements of
> several parts of an amateur transmitter to insure compliance
> with the law.

Bull. I'm certain the FCC fully expects the vast array of commercial
ham gear to be no problem as that equipment operates with similar
specs today. As before, if in operation on 60m, the FCC were to
cite me for improper operation, I'd then take whatever response was
necessary. Until then, however, I have every confidence that my
Kenwood operates just fine per the specs.

> >> You don't have to operate on those

It's not catastrophic and I'm sure the clarity will be found via the
pages of CQ and QST magazine.

2.75 MHz?

1.800 to 2.000 MHz = 0.2 MHz
3.500 to 4.000 MHz = 0.5 MHz
7.000 to 7.300 MHz = 0.3 MHz
10.100 to 10.150 MHz = 0.05 MHz
14.000 to 14.350 MHz = 0.35 MHz
18.068 to 18.168 MHz = 0.1 MHz
21.000 to 21.450 MHz = 0.45 MHz
24.890 to 24.990 MHz = 0.1 MHz
28.000 to 29.700 MHz = 1.7 MHz

0.2 + 0.5 + 0.3 + 0.05 + 0.35 + 0.1 + 0.45 + 0.1 + 1.7 = 3.75

3.75 MHz of bandwidth below 30 MHz, not 2.75 MHz.

Can anyone explain why radio amateurs should take
technical "advice" about measurements from someone
who doesn't even check their math?

Back during the comment period, I was amazed at how many active hams had

little idea of what was being proposed. And despite the ECFS system and lots of explanations about how to comment, there were less than 2500 total comments and reply comments to 98-143. Back in the '60s, when everything was by mail and there were only 250K US hams, FCC got over 6000 comments about incentive licensing.

>rule? Not at all.

Better re-read the rules, Bill. Does it SPECIFY certain steps or time intervals to do this? Certainly not. Do the rules require you keep your station "legal"? You betcha.

You can argue the semantics of you doing it yourself or sending it off to "whiomever" to get it done, but it needs to be done. If you want to wait until you are told there's a problem, then you've waited too long.

Are you waiting for somone to spoon feed it to you, Vippy? That's sure
what it seems like here!

>>> Yet, Hams will take a day off and show up on Friday for a Hamfest. It
>seems
>>> like its really a matter of priorities.
>>
>>Let's see....On one hand, an evening of circuit designing with Vipul.
>>On the other--a hamfest. Yep, priorities work for me.
>
>For one thing, I never asked anyone to take a day off from work.

For one thing YOU are the one who brought up taking a day off, Vippy!

(Kid can't even keep his own rants an assertions straight ! ! ! ! !)

>Take a day off for a Hamfest to go and buy stuff, when that stuff is
>available
>on Saturday also? Thats sounds intelligent. Oh, and Hamfests are really fun
>too.

Yes...Taking a day off, ESPECIALLY on a Friday and ESPECIALLY to go to a
Ham Radio related event makes sense to me...Of course I accrew PTO (paid time

off), so what do I care...?!?!

>>Maybe you believed you were being courteous. Maybe some folks there
>>thought you were being pushy.
>
>No, thats not what happened.

I bet. Uh huh...

>>It had to be rough, being rejected by radio amateurs AND EE's.
>
>At least that EE was smart enough not to attend the meetings, unlike myself
>(now former EE).

To be a "former EE" you must have at one time BEEN an EE.

>In that case, he was right to be snobby.

No person, in any situation, has the "right" tob e snobby. I think you
were acting like a fool and he didn't want anything to do with you.

Remember how you "refused" to ID yourself as an Amateur in the "EE class
you were allegedly taking? Well, Mr. EE didn't want to be in a group of Hams
and be identified with YOU. THAT says something.

>Also, I was offered a project from one Prof of the classes I took, so I think
>it has more to do with Ham radio than EEs. Obviously, I didn't take that
>offer,
>or I could still be considered an EE.

You can be an EE without being in the middle of a project to justify being
called one, Vippy. I am sitting at home making fun of your idiotic
rants...Does it mean that since I am not in the middle of doing CPR or wading
through somone's body fluids that I am not a Nurse?

>>Aren't interested in what? They aren't interested in what YOU want them
>>to be interested in? The self-centered bastards!
>
>Yes, its frustrating.

Maybe if you weren't such a putz and tried to follow what was going on,
rather than striding in demanding to have things go YOUR way, Vippy?

>Ham radio is a culture.

Ham (Amateur) Radio is a radio service regulated by the Federal
Communications Commission.

>Hams like to only do certain aspects of the hobby.

A narrow-minded assessment not validated by facts.

>Also, at the gathering I joined a few weeks ago, I wanted to take a break,
>but
>the host urged me to operate radios and make contacts.

Did he tie your ankles to a leash and wrap it to the table? Did his Doberman Pincers sit attentitively at the table and begin to growl if you appeared to NOT operate the radios?

How DARE he encourae you to operate the radios! The PIG!

>accurate for the life of the vehicle.

The radio is an electro/mechanical device, subject to the vagrities of manufacturing errors, enviromental factors, and out-and-out Acts of God. It may have been God's Gift to the Technically Inept when it left the front door, but everything after that is a crap shoot.

>The same ZERO maintenance is today widespread throughout
>the telecommunications industry. Why? Because we have found that
>today's equipment is rock stable and that doing "periodic" maintence
>measurements causes more problems than it finds. The same
>is true for the vast array of consumer products.

"ZERO maintenance"...?!?! Where are you getting THAT, Bill? Yes, decreasing maintenence IS an engineering goal, and many devices (including cellphones) are essentially throw-away items when they fail. But not so bigger assets.

>Your point? The fact is, that there is NO rule that mandates
>I measure anything. I am responsible for my signal and I accept that.
>What's the worst thing that could happen? I get a note from
>the FCC telling me that my signal was out of band, that I had too
>broad a signal, etc?

How about your signal; was dropping a harmonic on an EMS or Public Safety repeater and traffic was interrupted until you were found?

How about a VOR was interfered with and an aircraft on an ILS approach breaks out of minimums to find itself 2 miles from the REILS and 300 feet from KRUD's 700ft tower?

>The law sez I am responsible for my signal. The law does
>not proscribe any specific measurments, calibration or
>testing I must do to be a ham. Again, I accept the
>responsibility for my signal and operate as I see fit.

Bill...is that REALLY you in there?

>I have consistently stated and accept responsibility
>for my signal. What don't you understand about that.

I don't understand how you can "accept" it, but then run head-long into ignorance about avoiding a problem.

>I HAVE NEVER TAKEN ANY STANCE OTHER
>THAN FULL RESPONSIBILITY FOR MY SIGNAL.

But how can you take "repsonsibility" for something you can't quantify or qualifiy?

The "Feds" have had "full control" on US amateur radio since 1934.

I realize that may come as a rude awakening to those who
thought ARRL ran the whole thing... :-)

> Seems likely that all this concern with holding onto all possible spectum for
>homeland security use will fade with time as needs become clear

Tsk, tsk, tsk...some examination of Part 2's very big allocation
chart and many notes thereto will show a lot of federal users on
HF in that 60m area before 9-11-01...and unchanged after that
infamous date. Try researching some public sources other than
the ARRL website.

> So where's all that vaunted hi-tech Uncle Sam comms that you guys have been
>raving about?

It's still there and was there before "Homeland Security" was an
administration secretarial agency.

Read up on ALE or Automatic Link Establishment on HF. SHARES
uses that. Can you recognize an ALE signal if you hear one? You
can find out via the Internet with one site having sound samples.
Hint: It doesn't sound like OOK CW or FSK RTTY.

>The stuff that was completely secure, spread spectrum
>bulletproof and interference immune?

ALE doesn't need spread spectrum techniques yet can find an
open frequency automatically and send data at high rates
regardless of claims by olde-tymers that "phase shifting on HF
makes it no good." :-)

Sorry, Dickie, but OOK CW went the way of the dinosaurs faced
with a gigantic meteor for radio messaging. This is the new
millenium, not the days of the 1930s.

Enjoy your Archaic Radiotelegraphy Society activity as the last
living radio museum of morsemanship.

Hmmm...I'm still working on "1951-1968 = 16 years" (when it
should be -17 years). :-)

Radio Club of America (RCA) was formed in 1909, five years
before three New Englanders formed the ARRL to hack the
commercial telegram service. RCA is still around... :-)

> I know better than to predict what the FCC will do tomorrow,
> let alone 16 years from now.

Don't worry, Phil, amateurism will still exist...everywhere.

The National Traffic System can be depended on as an
indespensible backbone of national communications using
tried and trusty on-off keying telegraphy. An NTS message
originated today could reach its destination by 2016.

US amateur radio state of the art will have reached the peak
of perfection in 2016 using the very newest refinements in
manual telegraphy and be written up in glorious prose and
art work in the QEX yet to come. This will be praised to high
heaven as the olde-tymers give each other shaky high-fives
congratulating each other on the "most basic communications
skills" ever attained by mankind.

A few intrepid genius olde-tymers may have the last controls
on their outboard DSP filters understood by 2016.

The future is ripe with promise! Stay tuned...

Me, too! Been saying that for years! IMNSHO, hams have no hope
whatever of holding to any spectrum above 500 MHz.

Jim:

You're absolutely correct. I say let's send some oil exploration crews up to ANWAR, shoot any of those steenkeeng Caribou that might be in the way, and start drilling for black gold!

>input.

I think you'll find that to be a pretty standard response when some newcomer, regardless of technical qualifications, shows up and "volunteers" to start tweaking an already good working repeater. Once a repeater is set up and working well, most club members, and the repeater technical committee in particular, tend to want it to be left alone. They will also seek to limit the number of "control operators" with the access codes, for much the same reasons. Repeaters just don't lend themselves to being tinkered with by a lot of different people, once they're working right. Now, if they are having problems with their repeater, and you can fix it, then they're only shooting themselves in the foot by including you out. But this would be a relatively rare instance.

>I bet if I said I wanted to learn CW, they would enthustically help me do
>that.

I certainly hope so. Morse/CW is a valuable operating skill.

>Please realize that I was courteous, both at the meeting and at the repeater
>site when I made my requests.

I'm sure you were. Unfortunately, there is no good way to be told that a repeater group doesn't want another unnecessary pair of hands working on their machine!

>At my local club, there was an EE there. He usually does not attend the
>meetings. Anyway I asked him if I could work with him on some project. His
>response was snobby also.

This is not uncommon. A lot of what hams do does not lend itself to group effort. Perhaps if you offered to lead a club project aimed at those who are

beginners in the technical arena, you would get a better response.

>It seems the problem is that most Hams aren't interested and those that do
>handle these aspects are too snobby to include others. Ham radio is driving
>away those that can contribute and have technical interests and capabilities-
>in favor of other activites.

You're just running into the nature of ham radio. It is very much an
individual hobby, as opposed to a group activity.

Posting it ONCE is enough to generate the abuse report.

He knows that he's supposed to post it to "rec.radio.info", not here, per the log of permitted parties that post to the info group. Newsline got permission back in 1996.

We all know that he's a spammer and that if anyone really cared to read his [mis-]information, they would go to his web site or listen to his program.

You mean, they have posted THEIR recommended settings. That doesn't mean that they are correct either. In fact, their 1.5Khz down assumes that the center audio frequency component to be passed will be 1500Hz, and for the maximum bandwidth, a range of 100Hz to 2900Hz. A 2.4kHz filter will make that 300Hz to 2700Hz.... However, other ranges have been proposed here, so that doesn't automatically make their settings optimal.

EXACTLY! And that does NOT require me to measure anything
at anytime. Of course the rules require me to operate a legal
station. Would you expect otherwise. The fact that the FCC has
never added any certification requirements for some 80 or more years
indicates there has been no serious problem that would tend to
lead to such a mandate.

Personal history and a 30+ year career in telephony is where I get that.

> Yes,
> decreasing maintenence IS an engineering goal, and many devices (including
> cellphones) are essentially throw-away items when they fail. But not so
bigger
> assets.

I can tell you that most telcom gear has literally NO maintenance
associated with. It is all self diagnostic and has literally no or
at most only minor adjustments that can be made to it.

> >Your point? The fact is, that there is NO rule that mandates
> >I measure anything. I am responsible for my signal and I accept that.

Don't bet on it. It's "theirs" (NTIA's) and they don't want to
give it away like they were forced to release the microwave
bands which are going to be auctioned to wireless-networking
and cell-phone users. A classic case of "I've got mine...."

> So where's all that vaunted hi-tech Uncle Sam comms that you
> guys have been raving about? The stuff that was completely
> secure, spread spectrum bulletproof and interference immune?

The money in the Homeland Security game is going to build
bureaucracies, not for equipment and operating funds for the
agencies who were sucked up in the vacuum and who can't afford
to buy that stuff any more than the stand-alone pauper agencies
such as the FCC can.

Nobody lost anything via 98-143 plus in general the earlier creation
of the nocode ticket paved the way for the concept of reduced code
speed tests. 98-143 was for the most part a snoozer in the general ham
population.

> Back in the '60s, when everything was by mail and
> there were only 250K US hams, FCC got over 6000 comments about incentive
> licensing.

No surprise there, everybody who held a General or Conditional - which
was the huge majority of us then - lost prime space on top of being
barred from the expanded phone bands.

The number of complaints regulators get on NPRMs goes up exponentially
in proportion the the number of wounded revised regs generate. There
is no comparison in this respect between the impacts of 98-143 and
Incentive Licensing.

Working-level staff, and even mid-level managers, are never
invited to attend conferences on the sponsor's nickel. Either
they use available travel funds (which were never approved
unless we were doing an enforcement sweep on the show floor) or
they go there on their own personal funds. Been there, done
that.

The son of friends of ours worked a year as a "home office"
intern for a Congressrep. He never got invited either.

Oh, the process is legal - the law allows it under specific
circumstances.

IIRC the Federal Personnel Manual (Title 5, C.F.R.) requires
that such invitations to conferences be related to the official
duties of the invitee, that the conference be open to the public
as spectators (but not necessarily free of charge), that the
invitee is a speaker or other integral part of the program, that
prior approval from the executive level (in the FCC that's Bureau
Chief or Commissioner) be granted in advance certifying that
official funds have not been allocated, and that the accounting
for the reimbursement be open to public inspection under the
FOIA.

There is no limitation as to where the conference is held
because it's not on Uncle Sam's nickel. Rest assured that the
NAB or the IEEE or any other trade or professional organization
is not going to hold their conferences in North Wastewater.....
and international broadcast qnd spectrum management conferences
are not held inside the United States on a regular basis. They
are held in such places as Paris and Rio and the Spanish coast.

Bill Moyer's TV show on PBS didn't point the above out because
that would have weakened the attack. The reimbursement process
was legalized because without it, an auful lot of business
would never get done. The quality and ethics of the business is
left as an exercise to the ranter.

It would be an OK process if it was applied fairly and across the board, but it isn't, so I agree it's a stinky process as carried out.

Illegal it's not until The Congress passes a law saying so. If they do, I hope that they will also pass a law allocating the funds from the US Treasury so that there is no need to even appear beholden to any interest.

Don't hold your breath.

Anyone can agree or disagree with anything they want. The
anti-FCC-ers that I have dealt with are, overwhelmingly,
unaware of the process and how the agency works and what its
good points and shortcomings are. All they see is "big
government" and anyone who doesn;t agree with them is an
"apologist".

In my book the Satchell Paige Criterion applies to them.

Maybe it's because I've been working the process, both "inside"
and "outside" that leads me to the practical approach - "these"
are the rules and "this" is how we get what you want working
within the rules and "that" is how we get the rules changed if
you can't get what you want. Calling the FCC or its
protagonists or its antagonists or anyone else names or
mounting ad hominem attacks on them will not get that done.

>> Anyone who disagrees with the "final outcom" has a whole

>This would be a good thing if the "commish's" legislative process were
>more...well, more...American. (Checks & balances?)

Read what I posted. The "checks and balances" are there.
The FCC does not have the final word - both the courts and The
Congress can, and during the history of the FCC quite often did,
overrule the FCC's decisions.

What other "checks and balances" are you thinking of?

As Yogi Berra was supposed to have said, it's not over until
it's over and even then it may not be over.

You seem to forget that IF the 5 GHz band was given to the industry, it would be world wide. And your statement implies that world wide, 144, 220 and 440 MHz should be enough. Well: in Region 1, we don't have 220 MHz and only 430-440 MHz on 70 cm. So it is hardly possible to operate ATV on 70cm, we need the SHF bands! And over here, they already have given the 13 cm band to the industry, with amateurs also on secondary priority, so...

"Spectrum", old boy. You seem to post quite a bit of anti-FCC, anti-Phil Kane stuff under a variety of pseudonyms. To a fellow like you, anyone who works for the Federal Government is automatically a bureaucrat. Anyone who has worked for a particular agency becomes an apologist for that agency. There is no requirement for anyone to listen to or become a fan of Rush. Limbaugh was not a government employee nor was he ever elected to anything.

What is your claim to fame and why do you need to hide your identity?

> Why?

He is likely a self-appointed advocate because no group asked him to
become its advocate. He is for the removal of morse testing because he
finds morse difficult. He is for instituting a minimum age for amateur
radio because he is a PROFESSIONAL and doesn't want to be involved in
any activity where mere CHILDREN may be participants.

Yes, hamfests can be fun. Taking an extra day off and going on a trip
can be fun. Buying stuff can be fun. Chatting with other radio
amateurs can be fun. Do you find the concept of "fun" to be strange,
Vipul?

> >> Generally Hams are nice people, but when I asked about the repeater, the

>
> Yes, its frustrating. Ham radio is a culture.

Let's see. You're a ham but you want other hams to do what you want to
do. What is keeping you from doing what you want all by yourself?

> Hams like to only do certain
> aspects of the hobby.

That'd be incorrect. Some hams enjoy ATV. Some hams enjoy VHF. Some
hams like to homebrew. Some hams chase DX. Some do all of those
things. What are you--the activities director?

> Also, at the gathering I joined a few weeks ago, I wanted to take a break, but

The discussion of Ten-Tec's stock four-pole roofing filters vs Inrad's
six pole Orion filters has been a recent TT reflector topic. It seems
that the four-pole units are well chosen for their purpose and that
installing the Inrad filters with their better skirt selectivity can
actually degrade the performance of the Orion.

> > The DSP filter
> > skirts are razor sharp and there's no ringing down to 100 Hz.

In Orion's case, the accessing the menus is easy. I just don't want to
have to go to them to change modes.

> > DSP noise reduction (nine levels) is phenomenal.
>
> There's a hot topic. There are apparently major differences in the
> various rigs when it comes to the effectiveness of DSP noise blankers.
> Been a lotta comments about DSP noise abatement implementations
> ranging from superb to useless in the high-end rigs. Beats me.

Don't confuse blankers with the DSP noise reduction. The Orion offers
nine levels of noise reduction, a choice of DSP noise blanker or

hardware noise blanker (multiple levels), Automatic DSP notch and manual DSP notch (featuring adjustable width and adjustable center frequency.

> OK now 'fess up David: What *warts* does the Orion have? Don't be
> silly and tell me it doesn't have any, all xcvrs have notable warts.
> There's lists of MP warts and their fixes out there and some of 'em
> can't be fixed.

There don't appear to be any mechanical warts or any ergonomic warts. In fact, the TT reflector has the usual nit pickers bickering over the lack of a color display and the fonts used. A few (not those who actually HAVE the radio are bitching over fit and finish and over knob eccentricity. The warts I've found are all firmware related. A number have been addressed already. If the passband tuning and AGC settings are able to be retained in the band stacking registers and if a couple of tuning step settings can be modified, I'll be completely satisfied. These can all be accomplished rapidly. I can download them and not have to buy an Orio Pro or Orion ProII :)

Ten-Tec survives by being innovative and responsive to customer desires. The service department bends over backward to assist customers and to achieve rapid turnaround. When I call the company, I'm greeted by a real receptionist and don't get shunted off into an endless loop of menu selections and voice mail boxes.

Still going with the ARRL recommendations is probably the "safest." The
ARRL recommendations would carry more weight with the FCC than a person's
own individual calculation.

However, I personally don't plan to operate on these new frequencies for two
reasons. One, five frequencies is too limiting to the potential number of
QSOs. Two, I don't agree with prohibiting CW on a ham frequency.

From Larry Roll K3LT:

>I think you'll find that to be a pretty standard response when some newcomer,
>regardless of technical qualifications, shows up and "volunteers" to start
>tweaking an already good working repeater.

Yes, that makes sense.

>I'm sure you were. Unfortunately, there is no good way to be told that
>a repeater group doesn't want another unnecessary pair of hands working
>on their machine!

True.

>This is not uncommon. A lot of what hams do does not lend itself to group
>effort. Perhaps if you offered to lead a club project aimed at those who are
>beginners in the technical arena, you would get a better response.

I tried to start one such club. Its not easy to get started. Finding people
with similar interests, and getting members before the club officially opens is
not easy.

>You're just running into the nature of ham radio. It is very much an
>individual hobby, as opposed to a group activity.

Thats what I believe also.

1630. Re: This Doesn't Bode Well For The Future

From: Dave Heil k8mn

>> No, thats not what happened. The person gave me his email. I was courteous
>and
>> didn't hear back from him.
>
>Either the matter slipped his mind,

Could be.

>Have you learned anything from the experience?

No. But, I did learn from the event I went to a few weeks ago. Also, I had fun. There should be more events like that.

>Do you find the concept of "fun" to be strange,
>Vipul?

No. The concept of what Hams find "fun" be strange. <Re-arranged your words.>

>It could be but I don't personally know of any club in which the whole
>membership looks after the repeater. That just doesn't make much sense.

Not whole membership. Just those that are interested (like me). This works well because most arent interested, only a few are.

>Someone is doing it. Where do you come
>in?

I can learn about it.

>Looks as if you're doomed to a life of disappointments.

Life, or Ham radio?

>Maybe he knew that you were (almost) a EE and decided to be snobby
>anyway.

Actually, he did give me a small part later, after I persisted. I didn't take it.

>Let's see. You're a ham but you want other hams to do what you want to
>do. What is keeping you from doing what you want all by yourself?

Any project requires a group or the project will take a long time. Hams already help with Antenna setups, something that would take too much work for one person.

As I type this, the 14.313 Kooks are at it again.

You have the screwball from Evansville ghost-talking
to long dead hams and fictitious stations, #2 and #3
Mr. CW's calling CQ ad-nausea, comments from
what sounds like the infamous "bathroom man"
and many others.

Another typical Sunday morning showtime on 14.313 !

I will make note however, of one *very special* veteran
nutcase who is on 313 right now. It's the kook who is playing
the gospel and country western music I'm hearing.

Everyone knows exactly just who this guy who plays music is.
He's been associated with 14.313 for many years, going
back to the days of the infamous 20 Meter Wars orchestrated
by a now-defunct ham.

Still not sure? Well, our music player is located
in the southeastern USA. If you look at his ham
shack photo on QRZ.com you will see an
inordinate amount of home entertainment
and related audio mixing equipment.
All that stuff is not there for "window dressings" folks......

My question is, when the heck is Mr. Hollingsworth
going to *do his job* and bust this Jake-the-Fake
with another $10K fine, just like he did to
another legendary "14.313 luminary" of
days gone past...?

We are waiting RH.................

No. This not true at all. In agencies, such as the FCC,
it is exactly at the lower most levels where fraud, waste, and
abuse is at its greatest. Upper level managers are under too
much scrutiny. This is based on FOI reports obtained via
the Congressional route, which we have examined.

>

>

Again, not true! It is the working level staff and mid-level
managers who are abusing official credit cards and padding
travel claims. Been there, saw it on GAO repors.

> The son of friends of ours worked a year as a "home office"

The only "practical" view is that the U.S. Constitution is the
supreme law of the land. I didn't say it was so. The Founding
Fathers said it over 200 years ago.

Federal bureaucratic agencies do not deal in "checks and
balances." They rule by fiat, and this is EXACTLY what makes
them unconstitutional.

>
> What other "checks and balances" are you thinking of?

Uhhhh, lets start with those in the U.S. Constitution. And while
you are at it, please refer me to the part of the U.S. Constitution
which SPECIFICALLY authorizes a federal bureaucracy and
bureaucratic agencies such as a FCC. Oh, I forgot, liberals believe
we have an "elastic" Constitution. That is why liberals have
brought us such atrocities as Roe v. Wade and school bussing,
and tell us the Second Ammendment is a "group" right and not an
individual right. Sorry, that doesn't float, except maybe in the
Socialist Republic of California and on the left coast.

I wouldn't say it applies to all, but it does apply to most. IMHO, anyway. Still, it just doesn't sit right that that The Commish can propose one thing in an NPRM, then enact something completely different.

>
>> >Commission can propose one thing but enact something completely

I'm talking about when the Commission proposes something itself. For example, the restructuring NPRM proposed keeping the Advanced and increased the written tests. Also included requirements of how many questions on each subject would be in each test element. The R&O dumped Advanced and eliminated the content requirements. Huh?

>> We have had a bunch of those in

When's the last time a petition for reconsideration or an appellate court ruling caused a change in Part 97?

Showing personal harm is pretty difficult, wouldn't you say?

I recall how the Wormser, Adsit, Dinelli petition was handled by FCC, particularly the sloppiness of language. It didn't foster confidence in the system.
>
>This would be a good thing if the "commish's" legislative process were

Exactly.

FCC is also in the process of enacting limitations on petitions they consider repetitive.

Really cool. TT started that game with the Pegasus and it just keeps getting
sweeter.

Elecraft does something similar with their firmware, but it's not free. They
keep a database on the firmware in every rig they've ever sold. If you buy an
accessory that will work better with a newer firmware version than what you
have, they send you a new chip free. Otherwise you have to buy the new chip.
The new K2DSP accessory is user-reprogrammable, too.

Yup. They also support rigs that they don't make anymore. I dunno if they will
continue their boardswap service with the Orion. In previous rigs, if you had
or suspected a bad board in your rig, TT sent a replacement, and you swapped
'em out, sending the bad board back. No shipping the whole rig, and they'd
trust you to ship the bad one when you got the good one.

As I recall, TT started up in 1968, when all of the old-line ham manufacturers
were packing it in. They started out making cute little QRP CW transceivers.
Digi-Key started out about the same time, selling RTL chips and kits to make IC
keyers (hence the name).

There can be a BIG difference between lab tests and real-world conditions. For example, BDR measurements are usually made by tuning in a weak "wanted" signal, putting a strong "unwanted" signal a certain number of kHz away (usually 20 kHz) and then increasing the unwanted signal until the copy of the wanted signal is degraded by the unwanted signal. Great test for how well the rx behaves in the presence of a single strong unwanted signal. But what about when the band is full of dozens of strong signals, none of which is strong enough by itself to cause degradation of the wanted signal? Depending on the rx design, the results can be very different.
>
>> The 200 Hz filter in the 75S-3B is probably the worst filter
>> I've ever used. Tried to use.

The 75S3-C at W3ABT/N3KZ had one of those. Rang like mad. My homebrew FT-241A filter was better.

>> The meatball only tunes 200 Khz segemnts
>> and it goes downhill from there. Donkey rcvr to the core by today's
>> reckonings.

All depends what you want in a receiver.

The real test is to compare rx's side-by-side in the same real-world conditions and see which copies a given signal better.

>
Yup.

Here's another data point - the second place entry (single op, low power, probably the most competitive class) in the Nov. CW SS (NP2B) ran a pair of K2/100s. Total rig cost about $2500. Yes, there's an advantage in that callsign, and he prolly had nice antennas, but do you think everybody he beat spent less?

Interesting point! Even if we count the closed-out license classes as losses, they pale in comparison to the changes of 1968-69.

>> Back in the '60s, when everything was by mail and

"Expanded phone bands"?

Let's see - there were about 250,000 US hams back then. Of those, there were only about 4,000 Extras. Yep, a lot of interest....
>
>The number of complaints regulators get on NPRMs goes up exponentially
>in proportion the the number of wounded revised regs generate. There
>is no comparison in this respect between the impacts of 98-143 and
>Incentive Licensing.

Agreed.

But look at the converse of that statement. Lots of people, hams as well as prospective hams, stood to gain a lot by the restructuring. Heck, the ARRL proposal would have handed a free General upgrade to every Novice and Tech Plus on the books (that's over 175,000 hams!)

More important, the restructuring did not result in a flood of new hams. And as K2UNK points out, for some reason a relatively small percentage (~15%) of Advanceds have upgraded.

Right. This seems to be another instance where you're okay but whatever
a group of hams believe to be fun is "strange".

I've seen projects involving a group take several times longer than it would take a single individual.

Hams already
> help with Antenna setups, something that would take too much work for one
> person.

For some hams, that is indeed the case. That certainly depends on what is being erected and what supports are available. I can raise and lower any antenna on the two towers here quite easily with no help. Back in the days when I had no towers and relied on wires in trees, I could still do it all with no help. Even erecting the towers required the assistance of only one retired ironworker with a farm tractor. What we really could have used was a sidewalk superintendent like Len Anderson...but then we would have had to install a sidewalk and it just seemed like too much work.

Where does the "10 dB down" come from? The acceptred standard
for measuring occupied bandwidth is 26 dB down.

Self-diagnostics ARE maintenance. Just not human hands-on
maintenance.

When your (or my) Kenwood becomes self-checking, I can see not
having to do periodic "to ensure proper operation" tests.
Until then, I borrow the use of necessary test equipment from
time to time to show me what I expected - that I have no
problems.

Do you remember the joke from engineering school about
measuring the secondary voltage of a power transformer
by reading the nameplate? Same thing.

>Do you have your auto speedometer calibrated or do you believe it
>will stay pretty accurate for the life of the vehicle.

As a matter of fact, the Auto Club in both Northern and
Southern California has speedo test facilities available at
nominal charge and I used to take my cars there four times a
year "just for grins". The results: the speedo was off a few
mph (in the driver's favor) but the "few" varied over time.
Nylon drive gears do not last forever.

At one time there was a specific rule that mandated that all
signal components be contained within the authorized
bands/subbands. This appears to have been transmogrified into
a general rule [s. 97.103(a)] that the operator and
licensee are responsible for ensuring that the station is
operated in compliance with the Rules.

Bill, amateur radio equipment isn't built to Bell Standards to
guarantee a useful life of 30+ years continuous service. :-)

As to "auto speedometer calibrations," I just check it out
on the various highway stretches marked as specific for
a certain distance. Done it that way for years on the
highways from Pacific coast through mountain zone and
through most of the midwest states. Indicated speedometer
rate will vary according to tire wear. Our little travel
calculator is also a four-function arithmetic calculator, makes
it a snap to compute actual speed with time through a marked
zone. Time through a zone timed to the second with a digital
watch (Timex) kept calibrated with a portable radio clock updating
automatically every 24 hours with WWVB (Oregon Scientific). :-)

>> Laying-on of hands is not sufficient.

Okay...do we mark you down as a "Believer" then? :-)

>The same ZERO maintenance is today widespread throughout
>the telecommunications industry. Why?

Having done some design work FOR the telecommunications
industry I will agree with you in general. But, you are arguing
a "zero defects" situation and my empirical observation over
a half century says there ain't NO such thing as "zero defects."

Why are MTBF values ever calculated? With that "zero defect"
claim there would be NO failures and the mean time would be
infinite. Not so.

The whole "zero defects" philosophy is a GOAL, Bill, something
to shoot for, to improve the state of the art, to eliminate as many
maintenance folks as possible (they cost a telecom company
money).

>Because we have found that
>today's equipment is rock stable and that doing "periodic" maintence
>measurements causes more problems than it finds.

"Rock stable?!?" Bill, were you ever involved in metrology? :-)

I never mentioned "periodic maintenance," Bill. I just questioned
your knowledge (or any ready-built equipment owner's knowledge)
of how they KNOW their equipment is exactly within specified
parameters. Pretty advertising brochures and thick technospeak
specification sheets are just paper and ink...they don't reference
the actual performance of your particular ready-built equipment
other than a manufacturer's word on it.

If you want to take a manufacturer's WORD for something without
checking it, that's your perogative. No problem to me...unless you
interfere with what I am doing through improper operation. Then
it's up to the FCC and the FCC demands tests of equipment to
insure compliance with the law.

>The same is true for the vast array of consumer products.

Well, then, you ought to write the FCC and say they don't have
to do all that type acceptance testing...they can just take the
manufacturer's WORD that they comply with the law! :-)

While we are at it, we can also eliminate a whole standards
division within NIST and just take all manufacturer's WORDS
that they are "rock solid" stable and don't do any badness.

>> In Subpart D of Part 97 (all paragraphs of 97.3nn) there is
>> nothing about "measurement" but there are a whole heap

>counter? Accuracy today is incredible when compared to
>the 50s/60s.

As one who did metrology for a living in the 1960s, I agree that
overall accuracy has improved by several orders of magnitude.
It isn't perfect, though, and "zero defects" is a concept, a goal
to reach for, not something we can take for granted.

Today is not the "old tube days" either and those five little
60m micro-bands of FCC 03-105 are specified rather tight.

If you want to lay eyes on some "perfect" appearing numerical
digits on a display and Believe in them being "rock solid" and
that your transmitted RF is Believed to stay within the 2.8 KHz
legal specification, then fine with me. That's NOT any sort of
test of performance. It is just a Belief System.

>> >> No one else, not the manufacturer, not the dealer. You as

Okay...do we put you down as a Believer then? :-)

>I do NOT need to measure my actual signal to be confident that
>my signal meets specs. Do you measure your microwave
>to be sure it isn't eminating RF beyond the specs permitted
>for such devices (be the specs mandated by FCC, OSHA or whatever)?

Yes I did. A new Amana over-the-range-with-vent-hood model
microwave was installed with lots of other things on our
southern house kitchen complete make-over three years ago.
Borrowed a nice little portable spectrum analyzer (in calibration,
by the way) over a weekend to check it out. No problems on

radiation leakage, didn't even budge a wideband E-H Field
Monitor. Found out the halogen light under-counter wall wart
switcher tossed out too much EMI for my taste and replaced
it with an ordinary 12 VAC transformer. The 2.4 GHz cordless
telephone tested okay, too. :-)

>I have consistently stated and accept responsibility
>for my signal. What don't you understand about that.

Okay, you can sense RF performance by the Laying On of
Hands. Fine. :-)

>I know enough about the cross section of amateur demographics
>to believe that few hams have the test equipment you would expect
>to use to verify compliance.

I don't expect anything of the "cross section of amateur
demographics," Bill. If any of those "cross section" folks
are in technical violation of the radio regulations, courts aren't
going to take Belief System opinions as metrological tests.

>> FCC 03-105 give US amateurs five micro-bands, each with less

>I'm not complaining. I think it's great.

Let me correct a mistyped numerical value. 3.75 MHz of total
US MF-HF bandspace allocated to US radio amateurs, not
2.75 MHz. :-)

Okay, the FCC allocated a total of 14 KHz of 60m bandspace
instead of ARRL's request of 150 KHz contiguous. US amateurs
got less than 10% of the requested bandspace. That's still more
than all the available bandspace on MF-HF as of 13 May 2003,
right?

There ya go! Look to the magazines instead of the Federal
Register. If it's in real ink on real paper, everyone can absolutely
trust ARRL to interpret radio law, right? :-)

It is like having the bottle genie tell you that you have unlimited
wishes. Just type the words "I wish my Orion did..." and *poof* it is
done.

> Elecraft does something similar with their firmware, but it's not free. They

I don't think Ten-Tec users would gripe if they had to pay for downloads
(but I'm not going to suggest that to Ten-Tec).

> The new K2DSP accessory is user-reprogrammable, too.

I love the new flexibility. An example is the Orion's AGC. The medium
AGC setting is nearer to being "right" for CW. The fast setting is
simply too fast for my liking. By using the programmable AGC setting, I
have something between the two which suits my operating nicely.

> trust you to ship the bad one when you got the good one.

Shipping would have been an impossibility for me during the years I was in Africa. Sometimes Ten-Tec would send me a couple of different boards and I'd return whatever was defective and what wasn't needed to effect repairs.

> As I recall, TT started up in 1968, when all of the old-line ham manufacturers
> were packing it in. They started out making cute little QRP CW transceivers.

...and paddles. Al Kahn was bored after retirement as president of Electrovoice. He was spending his summers in Gatlinburg and wintering at his Michigan place. He and Jack Burchfield began Ten-Tec as something to do. When Al retired a second time, he gave his interest in Ten-Tec to the employees.

In my electronic sales days we had a Bud salesman conducting an after hours seminar for us. He was introducing the new Bud "Contempo" series of cabinets. I said that the stuff looked very much like cabinets made by Ten-Tec. He had a sheepish grin on his face when he announced that Bud was buying the cabinets from Ten-Tec.

> Digi-Key started out about the same time, selling RTL chips and kits to make IC
> keyers (hence the name).

...and Digi-Key has gone great guns. Where have all the old distributors gone?

Have you ever actually listened to the amateur radio HF bands, Len?

> This is the new millenium, not the days of the 1930s.

You mean Morse Code/CW wasn't used for "radio messaging" in WW2?

I'm reminded of the Heath SB-104 which looked good on paper but which,
because of its receiver problems, turned out to be a dog for reasons
precisely like those you described.

> filter was better.

Yep. I'd agree. A narrow filter with a little worse shape factor would
work much better. The Drake 250 Hz filter worked much better but it
can't touch the four-pole roofing filter/DSP combo.

I think Arno was more than a little disappointed that his new TS-870
with its big-signals-directly-into-DSP setup was at the bottom of the
pile.

> >Of course when you mention the C-Line, I assume that the words "Sherwood

Switching from the original filter to the 600 Hz roofing filter
certainly limited how many of those big signals could get into the
receiver.

Lessee, since I've become a ham, I've made 4 antennas: 2 dipoles, a magloop, and a 2 meter ground plane.

I've made an interface for PSK31. I'v made lots of other little doo-dads for my hobby. I'm restoring an old linear amplifier. Not one of these projects was done as a group effort.

Don't limit yourself.

Can't we get this straight?

When you refer to EE do you refer to "Electrical Engineer"?

Typically here in the US, an EE is a person who has a bachelors degree (at least) in the field of electrical engineering.

It isn't something that goes away when you aren't working in the field.

Others who work in the industry but haven't recieved a full degree are usually referred to as Electrical technicians. This includes two year associate degrees.

Either is a fine way to make a living, but I wonder if you are confused over the terminology.

There's no requirement in Part 97 that amateurs HAVE to test their
equipment, either. Just plug and play, Jimmie. Don't worry, be
happy, keep the faith, baby.

>>>The stuff that was completely secure, spread spectrum
>>>bulletproof and interference immune?

>watts ERP.

Feedback! Echo chamber! Speculation, Jimmie, just speculation.

Perhaps you didn't get the inferences tuned in correctly. Think
about THIS speculation instead:

The FCC might have gotten pished at the ARRL pushing for the
60m band (and all that fuss over "pioneering and testing" 60m
by a special group of ARRL-selected hams) that they tossed out
5 little micro-band crumbs. The FCC can truthfully say they've
given out more spectrum to US radio amateurs. Nobody can say
otherwise. :-)

What the FCC actually gave out is NOT what ARRL wanted and
those little 2.8 KHz BW micro-bands aren't good for the usual QSO
activity on other bands. NO OOK CW! :-) USB only, VOICE!
[are paddle-twiddlers furious or what? :-)] But, what was granted
is very close to the "necessary emergency" operation asked for
by ARRL, wasn't it? ARRL did all that "emergency" palaver in PR
statements and political lobbying and that is what it got!

OK, 5 little micro-bands good for "emergency" communications
and not much else. No CW contest elbow room and there's not
much chance of squeezing in two separate SSB voice QSOs
in one micro-band. No problem. FCC gave ARRL what it said it
wanted! One more lobbying monkey off the FCC's back.

ARRL rationalized itself a bit too far...except you will spin the
hell out of that as a built-in ARRL apologist, believer, and
athletic (radiosport) supporter. :-)

>> Sorry, Dickie, but OOK CW went the way of the dinosaurs faced
>> with a gigantic meteor for radio messaging.
>
>Have you ever actually listened to the amateur radio HF bands, Len?

Now, now, Jimmie, you are getting snarly again!

Yes, I have listened to every band below 30 MHz. The dinosaurs
didn't all die off after that big meteor hit. They lingered on, angry
and afraid, while their known world changed all around them.
Unable to support themselves or reproduce under such conditions,
they vanished through biodegrading (a few stumbled and fell into
fossil pool places, leaving only bare bones behind).

Like all those old dinos, the morsemen are still there on the ham
bands and hardly anywhere else. They are still angry and afraid,
unable to come to terms with a changing radio environment.
Once in a while an amateur T. Rex will try to step on other life,
still thinking it is "superior." Us ordinary life forms just dodge
around and watch Morsus Hammus Tyrannosaurus bellow
and stumble around. Bye, bye, dino..

>> This is the new millenium, not the days of the 1930s.
>
>You mean Morse Code/CW wasn't used for "radio messaging" in WW2?

The USA didn't get into WW2 until the 1940s, grasshopper.
Even so, the commercial communications carrier services and
US military relied on RTTY in several modes for the majority of
"radio messages" during WW2. The US Navy began using
on-line encryption among heavier-class warships (cruiser class
and heavier) via TTY in 1939. After full entry into WW2, even
USN submarines had encrypted RTTY sets (see the USS
Pampanito Museum website for a picture).

The majority of US military radio communications during WW2
was VOICE, Jimmie. Voice in the aircraft, voice between tanks,
voice between foot soldiers, even voice between ships. OOK CW
was on the way out even back then. Yes, there was
morsemanship taught and used in the US military way back then
but it was still a secondary mode. That secondary role gave way
to a tertiary role later and finally to oblivion. Bye, bye military
morsie.

All you Hammus Morsus Tyranosaurus types ought to learn to
play with other life forms. Your way of life is disappearing and
you remain defiant in denial of the obvious.

The one time I went to such a place about 6 years ago,
the speedometer tester was down for maintenance! :-)

Since us Californians got biennial smog testing some years
ago, the smog test station has a form of speedometer check
built into the smog test repertoire. Maybe not as accurate
as a separate, dedicated tester but it is an easy task to
have the programmed computer check the dynamometer
rotation against the tester's setting to speedometer reading.

WWV and WWVH are readable in any of the US states for
radio frequency checking. No nominal charges apply nor is
there any need for membership other than a radio and ears.

Frequency 14313 stands as an enduring living monument
how one person, KV4FZ, can destroy what was used as a
public service frequency for years. Then the stupid FCC
gives him his license back! In all fairness, it appears he may
have finally learned how to control his mouth though. Has
anyone heard him on any freq.????

> Guess that solves that.

And if anyone needed it to be any simpler...

Channel Center Frequency Amateur Tuning Frequency

5332 kHz 5330.5 kHz

5348 kHz 5346.5 kHz

5368 kHz 5366.5 kHz

5373 kHz 5371.5 kHz

5405 kHz Common US/UK 5403.5 kHz

Allied and Newark are still in business. Mouser is very good. Lots of others,
like Hosfelt. Also specialized folks like The Wireman, RF Parts, etc. (Standard
disclaimer applies). The 'net has actually helped by reducing/removing the cost
of printing and distributing paper catalogs.

Cardwell, of all people, still makes air variables and roller inductors. B&W,
now in Florida, still makes Miniductor. Their prices look high compared to
decades ago until you factor in inflation.

Is that Carly I hear in the background? Land of milk and honey....

Of course the guy had some nice antennas and world-class op skills. Point is he prolly could have run a pair of FT-1000s or whatever.

Then there's what Tree (you know who he is, I presume) did with a K2 in the QRP class. Scary.

BARF= PUKE.

Don Quixote (Herby) is a very intelligent individual. He has the sense NOT to continue his association with the misfits on 313. More power to him.

And the poster is quite correct. The various MM/Intercon nets that are NOW ON 300 used to operate on 313. And thanks to those misfits were run off.

KV4FZ....he was shut down, license removed. 2 years or so later he took his test, passed, went before FCC judge, was allowed to become a ham again. Got a call....applied to FCC for Vanity....KV4FZ...imagine that. Herby is back.

BUT NOT PLAYING THE SAME GAMES.

Heard him on 160 last season.

> given out more spectrum to US radio amateurs. Nobody can say
> otherwise. :-)

Nonsense. The NPRM proposed amateur access to a 150 kHz wide band with many
modes permitted, not 5 channels of USB. The NPRM was written by the FCC, not
the ARRL.
>
> What the FCC actually gave out is NOT what ARRL wanted and
> those little 2.8 KHz BW micro-bands aren't good for the usual QSO

How do you know? Do you have message totals for WW2?

> The US Navy began using
> on-line encryption among heavier-class warships (cruiser class
> and heavier) via TTY in 1939. After full entry into WW2, even
> USN submarines had encrypted RTTY sets (see the USS
> Pampanito Museum website for a picture).

Doesn't change the fact that Morse code/CW was used extensively by the US
military in WW2, and for years afterward. Which really seems to bother you.
>
> The majority of US military radio communications during WW2
> was VOICE, Jimmie.

How do you know?

> Voice in the aircraft, voice between tanks,

>
So?

There was a time when almost all ships were sailing ships. Over time sails were replaced by steam, diesel, and even nuclear engines. Sailing is now almost totally a recreational activity. Yet it's far from extinct or obsolete.

I do have to agree with your criticism that the quality of
language, thought, and details has gone down the drain, in
parallel with the decline of proper grammar and language usage
in American society in general.

With regard to FCC amateur radio stuff, perhaps it's because
Monte DePont, the attorney who wrote the language of most of the
notices (and corrected the sloppiness of the original drafters)
during the years that I was there retired about the same time
as I did, and "it's so hard to get decent help nowadays" who
have that skill.

>>more...well, more...American. (Checks & balances?)

>Exactly.

>FCC is also in the process of enacting limitations on petitions they
>consider repetitive.

Both Federal and state courts have had similar rules limiting
repetitive court filings and lawsuits for many decades. There
are even penalties which can be imposed on attorneys who file
those, and causes of action for defendants to recover damages for
repetitive filing of losing civil lawsuits ("common barratry")
and repetitive filing of losing criminal cases ("abuse of process").

>> There have been several station licensing cases (one that I am
>> intimately familiar with) that have kicked around between
>> the FCC and the courts for over 30 years.

> Is this something to be proud of?

The shame is on the litigants who don't want to settle the
issues and seem to enjoy keeping high-priced lawyers in luxury.

>Depends on the case. I doubt they are amateur licensing cases.

The two that I am thinking of are AM broadcast pizzing contests.

> Besides, Phil may not be at liberty to speak about them.

No problem - they are all in the public record and were finally settled.

One involved KOB in Albuquerque versus WABC, the ABC "flagship" station in New York. ABC claimed that because the NBC and CBS "flagship" stations in New York were 50 kW clear-channel stations, ABC was entitled to have WABC not share 770 kHz with anyone, no matter how distant or how configured to protect them, while KOB's posture was that they were entitled to 50 kW status because they were the only full-power station capable of covering the whole state. This went up and down to the Supreme Court of the United States over a period of 30 some odd years and when all the dust settled, KOB had to take secondary status because by that time there were enough other stations licensed to provide coverage to all parts of the state. On the other hand, KABC had to accept the channel sharing because the concept of "clear channel" stations was no longer in effect.

The other involved WNYC, owned and operated by the City of New York versus WCCO in Minneapolis. I followed this because in my college years I was what is now known as a "broadcast intern" at WNYC but in those days I was just one of the college kids who hung around at night and on weekends staying out of the way of the station management while learning the broadcast engineer trade. WCCO was the "clear channel" 50 kW station on 830 kHz owned by CBS while WNYC was running 1 kW Non-Directional days, and 1 kW directional at night up until 10 pm at which time they had to leave the air to "protect" WCCO. They could hardly be heard at the Hudson River (the western boundary of the city). CBS/WCCO in 1954 decided that enough was enough, and in the reflected light of the KOB/ABC case (above) they started proceedings to shaft WNYC, including spreading some very bad propaganda in the industry. This too went back and forth for more than 30 years on both the engineering and the policy issues, also involving side issues of WCCO wanting to put up a monster AM tower in the flight path of Minneapolis' airport which was fought by the airline pilot's association as a safety hazard, and WNYC getting involved in waiver requests to permit full AM-FM program duplication which were denied. Finally, WNYC was ordered to shift frequency to 820 kHz which involved settling a potential interference problem with WHSL in Louisville and to put up a more complex antenna system west of New York City which dumped their entire signal eastward to cover the city and allowed them to operate full-time. This settlement was imposed at a time when the City was virtually bankrupt and it took a while before they were ready to make the move. Eventually the station was spun off to a "Listener's Foundation" and the few times that I have heard WNYC's programming in recent years have shown me that they have degenerated into just another NPR station instead of being the leader in quailty programming and operation that they were in the '50s.

"Lo, how the mighty have fallen".

The attorney at the FCC's Broadcast Bureau who handled this case got the case when he first joined the Commission right out of law school, and he retired a few months before the case was settled. I talked to him on the phone at that time to congratulate him on the double victory and he was relieved that at last there was a solution on the horizon.

>
> "Expanded phone bands"?

Yes, expanded phone bands. From the end of WW2 thru the timeframe
under discussion U.S phone ops were not permitted below 3.800, 7.200,
14.200 and 21.300. As a General ~1954~1968 I could and did operate
phone down to those limits. Then along came the FCC with The Brainfart
we call Incentive Licensing. Part of that overall package included
reshuffling the phone bands to provide a very big incentive to become
an Extra. Whether or not this particular reshuffling was part of the
fundamental Incentive Licensing R&O is long lost minutia on my part.
All I cared about was that if I didn't take the test I was dead meat
as a dxer/contester so I took the test and haven't spent much time
looking back.

If I recall the details correctly the first wave of this reshuffling
maneuver specifically on 20 was to (a) boot Generals out of
14.200-14.225 (b) allow Advanceds to continue to operate above 14.200
and (c) the FCC opened 14.175 and up for Extras running phone. The
other bands were similarly rearranged. Which very significantly
changed the dynamics of phone dxing and dx contesting and created one
helluva uproar from Advanceds and the DX which all of a sudden found
volumes of us damned Ugly Americans operating in their "preserves"
below the former U.S. phone band edge limits.

> K2UNK points out, for some reason a relatively small percentage (~15%) of
> Advanceds have upgraded.

They don't have any particular incentive to upgrade is howcum. Unless
they're hellbent on having a 1x2 or a 2x1.

That's the "public" face. Behind the scenes, chances are very
good that the NTIA was concerned about not having direct
control over "others" playing in NTIA's playyard, whether they
caused interference or not.

I never said that. Most telco devices don't have a life that lasts 30
years. Most ham gear doesn't either. Even at that, unless something
breaks,
just what would you expect to go "out-of-compliance" in today's commercial
ham rigs?

Beg to differ all they want. What job function do they
fill? Today's all digital networks
are literaly maintenance free. Do things break? At
times, but the concept and use of preventive maintenance,
routine maintenance is almost nil. Also, FYI, Ma Bell was
killed off as of 1/1/1983.

I would take the report as an indication to do further checking.
The fact is that I have not encountered such a situation and I

remain confident that my not doing periodic testing of my
rig with external test gear is at all needed. In another
post you mention WWV...and that certainly allows me
to "validate" the digital readout of my rigs frequency
settings without any other equipment needed. Additionally,
my rig (as well as many others) used for HF have some degree
of metering to provide indications of relative power, modulation, etc.

Agreed, and most actual failures today result in a more
obvious fault condition than the type of frequency variation or
braoder than allowed bandwidth.

> Why are MTBF values ever calculated? With that "zero defect"
> claim there would be NO failures and the mean time would be
> infinite. Not so.

Even so, the failure usually results in a plug-in replacement. No
"routine maintence" takes place.

> The whole "zero defects" philosophy is a GOAL, Bill, something

> manufacturer's WORD that they comply with the law! :-)

The "type acceptance" testing is done on only a handful of units...
it isn't done or required against every unit coming off a manufacturer's
assembly line. QST and ARRL do technical reviews of almost every
new piece of ham gear that hits the market. Those reviews identify
the compliance per manufacturer's stated specs. Would you
expect every ham to do the same test of a newly purchased rig
that ARRL does?

> While we are at it, we can also eliminate a whole standards
> division within NIST and just take all manufacturer's WORDS
> that they are "rock solid" stable and don't do any badness.

The standards are what drives the manufacturer to produce
within those specs. I am not suggesting or championing
the end of standards for manufactured products.

It's a SWAG based on my contacts with other hams and
knowing the equipment they have and the operating practices
they follow.

> >> Not acceptible in a technical activity, Bill. The law is the

> Okay...do we put you down as a Believer then? :-)

You put me down as a ham responsibility for my signal and
operation as I see fit.

> >I do NOT need to measure my actual signal to be confident that

Courts? Other than an FCC pink slip, why would the courts
get involved...unless the ham cited grossly ignored and failed
to take corrective action to eliminate an identified non compliance?

> >> FCC 03-105 give US amateurs five micro-bands, each with less

Wasn't it Doc who used to say, "Cut the head off the snake,
and the body will die"? Meaning where are Herbie's gang of
misfits? It seems like they just vanished. I see where several
are silent keys now, but where are the others? I heard rumors
that a few are awaiting legal action in the courts, but does anyone
know who they are and what type of legal trouble they are in?

There's no goat there. He remains in violation of the rules for this newsgroup
and continues to be with each post. An example of a group who does it
correctly is the group responsible for the Ohio/Penn DX bulletin.

So did the one that needed a -1.6kHz shift. It all depends on which audio
frequencies one wants to pass - then take the middle of that range and that
becomes the shift.

Not if the computation is improper. Just because the ARRL is "in bed with" the
FCC doesn't automatically mean that they do everything correctly.

I'd bet that ARRL ran it by the FCC before publishing. Normal procedure. That way there's never a false move or incorrect procedure published in such cases. And no egg on face. ARRL doesn't like to get caught with egg on face.

Those old radio regulating agencies are GONE. Defunct.

The US Navy is still around but NOT regulating US civil radio
since before 1934.

The Radio Club of America is still around, founded in 1909, five
years before three New Englanders formed the ARRL to hack
commercial telegram carriers.

>> Those are the folks who

What is "clear?"

Have you extracted any NTIA documents from the FCC ECFS on
RM-10209? I don't think so.

FCC isn't Google. Try to break away from old, old message
searching and look through the FCC ECFS.

>>>> Read up on ALE or Automatic Link Establishment on HF. SHARES

>By you.

No, YOU are the one speculating on what the NTIA is "worried
about."

Now go do an ECFS search on RM-10209 and tell us all what
the NTIA *really* said about all that "worry." :-)

>> Perhaps you didn't get the inferences tuned in correctly. Think

>Nonsense. The NPRM proposed amateur access to a 150 kHz wide band with many
>modes permitted, not 5 channels of USB. The NPRM was written by the FCC, not
>the ARRL.

Tsk, tsk, tsk. ARRL can NEVER write any NPRM or even an RM
(ET Docket No. 02-98 and RM-10209 respectively). ARRL can
only request. RM-10209 was *exactly* like what ARRL wanted.

Try to understand federal procedure, grasshopper.

>> What the FCC actually gave out is NOT what ARRL wanted and
>> those little 2.8 KHz BW micro-bands aren't good for the usual QSO
>> activity on other bands.
>
>They're not micro-bands. They're channels.

I call them MICRO-BANDS. You don't like it? Guess where you
can put your don't-like. :-)

"Channels" are they? Mass Media Bureau talks about BC
channels. The narrowest of those are quite a bit bigger than
those five separate little MICRO-BANDS.

>> NO OOK CW! :-) USB only, VOICE!

>That's the point.

What "point?" Are you implying the USA had "no radio" before
1941?!?!? I know there was radio here before then...heard it
myself. It's even in all the OTHER radio history outside of ARRL
official outpourings.

>> Even so, the commercial communications carrier services and
>> US military relied on RTTY in several modes for the majority of
>> "radio messages" during WW2.
>
>How do you know? Do you have message totals for WW2?

Actually, I DID have figures on that! :-) But that was some time
ago when I actually served in the US Army Signal Corps and had
access to their radio data between 1953 and 1956.

You never served in ANY branch of the US military. Do YOU
have access to OTHER radio arcana besides old amateur stuff?

>> The US Navy began using

>> Pampanito Museum website for a picture).
>
>Doesn't change the fact that Morse code/CW was used extensively by the US
>military in WW2, and for years afterward. Which really seems to bother you.

Try to be OBJECTIVE, grasshopper. Define "extensively."

A LOT of DIFFERENT things were USED EXTENSIVELY by the US
military in WW2. :-)

This is 2003, not 1941 to 1945. You didn't exist in WW2. But,
there are LOTS of history of the US military in WW2. :-)

Let's try land communications among the foot soldiers. Before WW2 the small-unit radio was a kluge of three rucksack-carried radio boxes and used voice. Some invited Motorola civilians saw that and came up with what became known as the "handie-talkie." Motorola in Chicago was producing them when December 7, 1941, came upon us Americans (not you, Jimmie, you didn't exist yet). Handie-talkies were eventually used by all branches of the US military. Motorola followed that with the SCR-300, the "walkie-talkie," again voice but using FM. Armor and artillery units got vehicular FM radios, again voice and FM, frequency-compatible with the SCR-300. Those vehicle radios got the colloquial name of "tank radios" because the tankers loved them to keep in touch reliably with the rest of the troop and squadron. Sure, there were field radios with OOK CW telegraphy but the teleprinters gave commanders very quick printed communications with little error (compared to manual telegraphy). There was considerable support for teleprinters available up close to the battlefields, including radio relay equipment. After the end of WW2 several nations copied the SCR-300 outright (Brit version became WS-31). The US developed the AN/PRC-6, the VHF successor to the handie-talkie (low HF only) and compatible with the AN/PRC-9 family of VHF backpack radios that replaced the SCR-300 during the Korean War. Those are all voice mode radios. By the time of the Vietnam War the AN/PRC-25 had been fielded, again VHF FM voice, but nearly all solid-state. The follow-on PRC-77 was an all solid-state PRC-25. An eighth of a million 25s and 77s were built in its service lifetime. By the first Gulf War the US military was switching over to the SINCGARS family, again FM voice but this one could frequency-hop and digitize the voice (enabling easy voice scrambling) and also send data. By the end of last year a quarter million of the SINCGARS full and improved had been built and fielded. Voice communications in the US military on land was king from about 1938 to the present time.

Also around 1938 the air forces of the US got the first of the "Command Sets." Those were voice and OOK CW but the mode of choice by pilots was voice...pilots on the flight deck got control even though the radios were farther aft. With the SCR-522 and its close cousins, single-seat aircraft were on VHF with voice. Air speeds had climbed along with altitude, pilots couldn't handle high-performance combat aircraft and also tap out slow morse on leg-strapped keys. After the breakoff of the USAF from the Army, all US military aviation used UHF voice for air-air, air-ground communications. US led the way for international civil airways communicating by voice on VHF AM sets after 1955. Yes, long-distance air carriers used telegraphy on over-ocean flights but those were replaced by sideband HF sets and the telegraphy-knowing aircrewmen were out.

The world's navies held onto manual telegraphy the longest. Call it tradition. The maritime world was the first to embrace radio. Ships moved at slow rates. Slower-speed morse was not a

problem afloat. But Flag communications needed good
encryption and they got it with the "Sigaba," the rotor-rolling-
code secure teleprinter. They had that since the late 1930s.
Ships routinely sailed long distances so "CW" was okay for
ordinary messaging. But, ships had to do lots of voice up close
and personal to other ships and in harbors and with support
aircraft.

>> The majority of US military radio communications during WW2
>> was VOICE, Jimmie.
>
>How do you know?

I was IN the US military, Jimmie. Some of the communications
equipment I used was also used in WW2. The immediate history
of the US Army and some other branches was available to me.
I both served with and talked to military members who were IN
WW2 doing many kinds of communications. My service time
began just 7 years after WW2 ended...not enough time to enable
ex-WW2-vets to embellish their stories like some do today.

>> Voice in the aircraft, voice between tanks,
>> voice between foot soldiers, even voice between ships. OOK CW
>> was on the way out even back then. Yes, there was
>> morsemanship taught and used in the US military way back then
>> but it was still a secondary mode.
>
>Not really.

REALLY. Don't try all that denial, Jimmie. It doesn't get you anything
but funny looks from people who know better than you.

>> That secondary role gave way
>> to a tertiary role later and finally to oblivion. Bye, bye military
>> morsie.
>>
>So?

So bye-bye, so long so-so.

>There was a time when almost all ships were sailing ships. Over time sails
were
>replaced by steam, diesel, and even nuclear engines. Sailing is now almost
>totally a recreational activity. Yet it's far from extinct or obsolete.

Sails don't work by radio, grasshopper. :-)

Are you going to find OOK CW radios aboard recreational sailing
vessels today? Only with amateur radio licensee sailors. A couple
months ago I used a little SGC-2020 HF SSB transceiver aboard
such a recreational sailing vessel. No telegraphy key attached.
Just a microphone. How about that? :-)

So now what, mighty morseman?

Wasn't it Doc who used to say, "Cut the head off the snake,
and the body will die"? Meaning where are Herbie's gang of
misfits? It seems like they just vanished. I see where several
are silent keys now, but where are the others? I heard rumors
that a few are awaiting legal action in the courts, but does anyone
know who they are and what type of legal trouble they are in?

BARF
...../////////////////////////////
There is evidence that James O'Brien, W4AMP, once a BARF "enforcer" and
member is now under indictment for Felony Stalking. This can be verified by
looking at the Cobb County Sheriff Dept. web page. His charges are listed
there and he is, according to the site, awaiting trial this July.
The web site also shows that his wife, WA4SEX was also arrested for
stalking, misdemeanor.
Not mentioned is the search warrant the two-county detectives served on him
while he was living in Hiram, GA. They found ample evidence to charge him
with Felony Stalking and even, not surprisingly, found a bit of a
"controlled substance" in his home. They then added a second charge.
Mr. O'B spent around 33-35 days in jail and upon his release he was
re-arrested to face charges in the neighboring county. He allegedly
explained his time away from the radios by telling area Hams that he was out
of town on "business."
Mr. O'Brien is currently facing some serious loss of liberty as a result of
his illegal activities and several of us wish him a long journey.
So much for a fellow BARF member.

1693. A Memorial Day Message

Newsgroup: rec.radio.amateur.policy
Date: 2003-05-26 12:12:54 UTC
From: k4yz@aol.com
Message-ID: <20030526081254.04407.00000443@mb-m15.aol.com>
Source record: 67793

As yet another Memorial Day has arrived, more names have been added to those who have fallen in combat in order to allow us to remain free, and under a new banner, allowed others to have freedom they had not know for a generation.

Where do we find such men and women? Will we find them in the future when we need them again?

The following was sent to me as a forward...I couldn't have been this graceful.

To those of you who have served our Nation...To those who serve today and to those who have preceeded us, Thank-you.

Steven J Robeson

Subject: Memorial Day 2003

It is no wonder that many Americans no longer observe Memorial Day with reverence. Schools no longer teach civics, the courts exclude God (officially) from the public square, and the media and malls "celebrate" Memorial Day for commercial sales. Indeed, Memorial Day has been sold out.

Fortunately, Memorial Day is still reserved by American Patriots as a day to honor the service and sacrifice of fallen men and women who donned our Armed Forces uniforms with honor.

When contemplating this Memorial Day, consider these tender words from 3-year-old Taylor Pokorney at the funeral service for his father, Marine Corps 1st Lt. Frederick Pokorney, killed in action recently in Iraqi: "My daddy, my hero, I will take care of Mommy for you as you asked. We will be best friends. I will take her to Sea World for my birthday like you planned. I love you. I need you. I miss you."

We invite you to forward this e-mail with young Taylor's words along to others, as a solemn reminder of who we honor on Memorial Day. One appropriate way to recognize fallen veterans and their families is to join with others and help place flags on the graves of fallen Patriots at your nearest National Cemetery (generally done the Saturday before Memorial Day).

Founding Patriot John Adams said: "I am well aware of the toil and blood and treasure that it will cost to maintain this Declaration, and support and defend these States. Yet through all the gloom I can see the rays of ravishing light and glory. I can see that the end is worth more than all the means...." Indeed it is!

A MEMORIAL DAY MESSAGE

"Tell them, tell them when you get home that I gave all of my tomorrow's so they could have today!"

Those are the words on a tombstone, far across the Pacific, of someone who gave up his life for our future. Were those words uttered so that those of us who are left could just enjoy our lives without "getting involved" or were they written to remind us that the work of freedom and liberty is never done?

Were those words written to suggest to us that it is not our job nor our responsibility to keep alive what they fought and died for or were they written to remind us that we were given the opportunity of life so that we would continue to defend, and keep alive the memory of what they gave their last full measure for?

Let us here today, tonight, tomorrow, next month and next year - remember these gallant defenders of our freedom. Most were not heroes as defined by the most hallowed Medal of Honor nor even as defined by the silver or bronze star. But they were ALL HEROES. Yes they were heroes because, without hesitation they fought for our country when they were asked to defend her.

Most didn't die throwing themselves on a hand grenade, charging a bunker or manning a machine gun until their ammunition was gone. Most didn't die diving their airplane into an enemy ship or marching in the infamous Bataan Death march -- but they are heroes because they fought when asked to fight. They left their families, friends and good times behind and went to fight for our freedom without hesitation.

Some -- never even fired their weapons because they were killed before they ever reached the beach. But they were heroes because they were there, ready to fight for America - for family, flag and country.

Most were scared to death as they prepared to meet the enemy. Their stomachs were turned upside down and they prayed to God and wished they were with their moms, dads and sweethearts rather than being where they were.

But they were where they were, fighting an enemy that was threatening their right to life, liberty and the pursuit of happiness. They were fighting an enemy because they believed in America, they loved Her flag and they wanted to protect American's right to worship as they chose. They were there, without hesitation, fighting for what they believed in and dying for what they believed in so you and I could live the way we chose in a free country.

But they did not die so that we would stop fighting for what they believed and died for. They fought and died knowing that we, the living, would go on fighting for that same freedom, that same country, that same flag and for that same right to worship as we choose.

Abraham Lincoln, at Gettysburg, said:

"It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us--that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion--that we here highly resolve that these dead

shall not have died in vain--that this nation, under God, shall have a new birth of freedom--and that government of the people, by the people, for the people, shall not perish from the Earth."

It is for us the living to go on defending what they died for. It is for us the living not to allow history to forget what they gave up all their tomorrow's for. It is for us the living to expect to get a bit uncomfortable as we continue to tell the truth even as the vocal minorities try to silence us.

Good Enough is Not Good Enough! When we open our mouths but once and we're told we shouldn't say that --- we must not say we tried --- good enough! Good enough is not good enough.

If when we attacked Guadalcanal and landed at Salerno, we found that "they" were going to fight back, we didn't give up because they fought back. We continued to fight because we knew our cause was right!

When Americans rode in the landing craft before storming the beaches at Guadalcanal, Tarawa, Sicily, Anzio, Normandy, Peleliu, Saipan, Iwo Jima, Okinawa, Inchon and many other places we had never heard of before and when they fought in North Africa, the Philippines, Italy, France, Bastonne, Germany, Korea, Vietnam, the Gulf and MANY other places foreign to us -- most were scared to death; their stomachs were turned upside down and they wanted to be back home with their loved ones. But that did not stop them from attacking America's enemies bravely and without hesitation. They fought, and many died, but they did not give up because someone shot back at them.

It is for us the living to continue to defend and keep known what they fought and died for -- what they gave up all of their tomorrow's for. They did not die so that we could become complacent; nor did they die so that when we, the living, reached a single obstacle --- we should quit. They died knowing that we would go on defending their actions, defending history and defending what they gave up all their tomorrow's for.

If WE don't remember ---if WE don't defend what they fought and died for and what we fought for -- who will remember? Who will care?

Revisionists are attempting to change history. ---- At the Smithsonian they sought to tell of our supposed atrocious to our past enemies. America's Ambassador to Japan apologized to the Japanese for us without getting any apology, nor even an acknowledgement of wrong-doing.

Peter Jennings had an hour long TV special demonstrating our injustices and he expressed disappointment that the Smithsonian was prevented from displaying all the photographs of the results of our bombing of Hiroshima and Nagasaki. He expressed disappointment that veterans blocked the truth from being known. And --- until many Minnesota veterans and Asian Americans protested --- a mass Requiem Hiroshima, was to be played for the dead, caused by America and Americans, of the bombing of Hiroshima without describing the events and atrocities committed that led up to our having to drop the bomb.

Today -- WE are even prevented from protecting our flag by the minority and a few in Washington, DC even though most Americans proclaim that burning our flag is not what they consider free speech. How many of us who fought for our flag and our country remember the feeling as Old Glory" was being raised over a piece of land we fought for ---- and many died for? How many remember seeing or hearing about our valiant warriors, who were fighting on Iwo Jima, as they stood and cheered when they saw the flag being raised over Mt. Suribachi.

Today our flag is not present in many classrooms across this nation and if it is there is no pledge of allegiance. Today even many of America's houses of worship do not fly "Old Glory!" Is it any wonder why America and Americans have changed so drastically?

Who ---- in the future ---- will even remember what our veterans did? Who will remember our sacrifices? Take a walk down the street today and ask people important questions about WWII, Korea and even Vietnam. How many correct answers do you think you'll receive. How many won't even answer at all and how many will say ”All I know is ---- at the end of WWII ---- we shouldn't have dropped the bomb!" "We were wrong to drop the bomb!"

Who would we blame for this? All veterans and all veteran's organizations who would discourage its members from being involved in defending what they gave their lives for - would be to blame. All of us who won't take the time to write or speak or call their representatives ----- will be to blame.

And if, when we're again called to duty ---- this time to guard the streets of Heaven ---- we look down and find that no one wants to defend our nation, no one wants to follow our flag and even the monuments to defenders past - are being torn down, we will hang our heads in shame and say why! Why did we allow ourselves to not defend what we did and what they died for?

And now we are engaged in a war against terrorism and more Americans are sacrificing their lives for your freedom and mine. These young Americans, who are all volunteers, are proud representatives of America and are doing a wonderful job of following up all of those who fought for our freedom in the past.

Each death of a patriot hurts terribly but it especially has to hurt the loved ones left behind even more than before because I'm sure they thought, when there were so few deaths, why?? Why my son or daughter. Why? Why? But they can truly hold their heads high and be proud of the freedom their loved one died to defend.

Thank God for those who risk their lives to save the freedom we hold so dear. Thank God for those who keep our children and grandchildren safe. Thank God for those who don the uniform and pledge to go where they have to go and do what they have to do to keep America free.

In closing, let's remember again what Abraham Lincoln said: "that we here highly resolve that these dead shall not have died in vain," and what President John F. Kennedy said in his famous inauguration speech -- "Ask not what your country can do for you -- ask what you can do for your country" and last of all remember that gravestone far across the Pacific which states: "Tell them I

gave all my tomorrows so they could have today!"

Let's remember all of the hero’s in this cemetery and in cemeteries all across America and all over the world ------ let's remember that they too gave all their tomorrow's so that we could have today.

A whole LOT of embellishment. (And we are surprised...WHY?) He has stated
that he's known Morse Code for quite a while. Again, if an Amateur Radio
license were even a low priority, it could have been accquired a long time ago.

It's not even on his list. He's found a niche where he can aggrivate and
insult to his heart's content with desired results.

He's simply an antagonist and liar. He get's what HE wants, nothing more,
nothing less.

>14.200 and 21.300. As a General ~1954~1968 I could and did operate
>phone down to those limits. Then along came the FCC with The Brainfart
>we call Incentive Licensing.

Hold on a sec...

Before Feb 1953, the only HF/MF 'phone available to Generals & Conditionals was 10/11 meters and what was left of 160. In the 1951 restructure that gave us the Novice, Tech and Extra and renamed the old ABC classes, FCC upped the ante by announcing there would be no more new Advanceds after the end of 1952. Then in December of '52 they went the other way and opened up everything to Generals and Conditionals.

Point of all that is simply that an incentive system existed long before 1968. The period of "Generals get it all" lasted from Feb 1953 to Nov 1968 - just 16 years and 9 months.

>Part of that overall package included
>reshuffling the phone bands to provide a very big incentive to become

Same here. In fact the original proposal was that by 1969 it would take an Extra to get access to the lower 50 kHz of 80/40/20/15 CW/digital.
>
>If I recall the details correctly the first wave of this reshuffling

>maneuver specifically on 20 was to (a) boot Generals out of

>below the former U.S. phone band edge limits.

I think you've got two different historical items mixed up. The original IL implementation did not expand the 'phone bands at all. That happened a few years later. I'll dig up the history and double-check.

>>
>>Only seems that way to you.
>
> ...and the BoD of ARRL, the staff of ARRL, and 170 odd
> thousand or so members.

Being an active member and reading the minutes of the board, I can say
that this is utter balderdash.

But then Lennie knew THAT as soon as he wrote it.

>>> Feedback! Echo chamber! Speculation, Jimmie, just speculation.
>>
>>By you.
>
> No, YOU are the one speculating on what the NTIA is "worried
> about."

That's EXACTLY what the NTIA is concerned about, or they wouldn't have
batten an eye over this.

There are significant users of that part of the spectrum, and we were
lucky to even be let in the neighborhood. Our conduct now will determine
future expansion.

>Now go do an ECFS search on RM-10209 and tell us all what
> the NTIA *really* said about all that "worry."

For those of us who DO have to deal with NTIA on issues other than Amateur
Radio, I can say that this WAS an issue for them based upon comments raised by
other NTIA users.

Someone (such as myself) with PRACTICAL experience in such matters might
know better. Lennie does NOT.

>Try to understand federal procedure, grasshopper.

His name is Jim. He calls you by your proper given name, yet you continue
to insult him. This makes you a scumbag.

Also, you place yourself upon a pedestle that you did not earn in doing
so. (calling him "grasshopper", the connotation being that you are the mentor

from the "Kung Fu" series...You are NO "mentor")

>>They're not micro-bands. They're channels.
>
> I call them MICRO-BANDS. You don't like it? Guess where you
> can put your don't-like.

Then, "Mr I-Am-A-Radiocommunications Professional", you would demonstrate your ignorance yet again.

As if we were shocked.

>>How do you know? Do you have message totals for WW2?
>
> Actually, I DID have figures on that! :-) But that was some time
> ago when I actually served in the US Army Signal Corps and had
> access to their radio data between 1953 and 1956.

Rear area radio clerks have access to that info, Jim.

>This is 2003, not 1941 to 1945.

Nor is it 1953...or 1956...or anyother time before May 26th, 2003, yet YOU seem to constantly refer to it, yet assail those who do it also.

>Let's try land communications among the foot soldiers. Before
> WW2 the small-unit radio was a kluge of three rucksack-carried
> radio boxes and used voice....(SNIPPED)

I am sure it was yet another informative barrage of non-germane radio history, however none of it relevent to PRESENT DAY Amateur Radio practice or policy.

You, yourself, Lennie, routinely assail others for such trips down "Nostalgia Lane"...How come it's "OK" when YOU do it?

>Also around 1938 the air forces of the US got the first of the
> "Command Sets."...(SNIPPED)

A left turn off of Nostalgia Lane onto Boatanchor Drive.

>>> The majority of US military radio communications during WW2
>>> was VOICE, Jimmie.
>>
>>How do you know?
>
> I was IN the US military, Jimmie.

One three year active tour in a rear area radio station.

Whewie! We are sooooooooooooo (un)impressed.

>My service time
> began just 7 years after WW2 ended...not enough time to enable
> ex-WW2-vets to embellish their stories like some do today.

And YOUR "service time" ended over 43 years ago...MORE than enough time for YOU to embellish a LOT. Like associating yourself with combat KIA's who died 3 years before yuo were even in boot camp.

I find it even MORE offensive than usual that YOU would even broach the topic on this, Memorial Day. Your ability to offend and insult knows no bounds, Oh Scummy One.

>>> Voice in the aircraft, voice between tanks,
>>> voice between foot soldiers, even voice between ships. OOK CW
>>> was on the way out even back then. Yes, there was
>>> morsemanship taught and used in the US military way back then
>>> but it was still a secondary mode.
>>
>>Not really.
>
> REALLY. Don't try all that denial, Jimmie. It doesn't get you anything
> but funny looks from people who know better than you.

Such as...YOU...?!?!?

BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! ! ! !

>So now what, mighty morseman?

So I'd say he pretty well deflated yet another LennieRant. You made even more unfounded and irrelevent twists in the road, insulted people you don't know, and once again dishonored your military service.

Happy Memorial Day, Lying Putz.

has
> been near 100% maintenence free.

Your interpretation. I am saying that in my 30+ year career,
I have seen the evolution of equipment to near
maintenance free state. That does NOT mean a piece of equipment
built 30 years ago is as maintence free as today's.

> >Most telco devices don't have a life that lasts 30
> >years. Most ham gear doesn't either. Even at that, unless something
> >breaks,

stay
> on net.

So you didn't need a periodic maintence measurement to
know there was a problem with your rig. That's exactly my
point. To effect a specific diagnosis and repair may call

into need certain testing, but even you admit in this case
that you knew there was a problem without doing
routine testing.

> I put it on the bench and found several things wrong. I fixed them.
> Had I not kept track of such things, I would not have been "in
compliance".

You just admitted you knew something was wrong because of the
need to frequently retune. If with that knowledge you still continued
to operate, then your common sense would be in question (IMHO).

> >> I have family working for Mom Bell in Smyrna, GA, and she'd

There is plenty of non-maintenace stuff that keeps today's tech's
busy. They don't field repair anything anymore...just plug-in
replacements. You won't find much in the way of test
equipment in today's telco offices either.

> >Also, FYI, Ma Bell was killed off as of 1/1/1983.
>
> Maybe so, but some of her offspring have the same surname.

They may use "Bell", but that's no longer indicative of "Ma Bell"
which represented at the time the AT&T parent company and the
20 odd tellcos under that umbrella (i.e. NJ Bell, Illinois Bell,
SW Bell, etc.) That was what was broken up in 1/1/84 (I mistakenly
said 83 in my original post).

> >> >Because I don't have any such problem.
> >>
> >> That you KNOW of.......
> >
> >Works for me.
>
> Then we can assume you shop at "Mediocrity R Us"...?!?!

How does what I do translate to mediocrity mindest. I just purchased
a brand new truck which does not need to be inspected in NJ until
2007. Should I pay to have it inspected for emmisions anyway? How often?
Or do I drive it and not worry about emissions unless some other
indication occurs (e.g. enigine warning light, change in gas mileage,
loss of power?)?

> >> >The same way that I take responsibility for the speed I am going in a

Why? Are you incabable of driving without a speedometer?
Does the car NEED the speedometer to function?

Nothing wrong with that in my book. If it comes to pass that we all then
set the cxr to 1.5KHz down, at least we are all able to communicate
with each other regardless of specific center frequencies based on
individual signal bandwidth. Does anyone really think that if

a ham's signal cxr is down 1.5KHz and that ham is operating
with a narrow filter which results in his individual center freq being
less than the FCC stated center freq, that the FCC would care one
iota?

Cheers,

Only if you want to be sure you are complying with posted speed limits.

I guess you can argue the "need" to test all you want. You don't want to,
that's fine. It's your license. I have caught more than one problem before it
BECAME a problem because I exercised what I consider my responsiblitiy to do
so. The other item I exampled was a problem determined by experience.

Youse pays your money, youse takes your choice.

Sounds logical.

Do you think 9-11 caused NTIA to rethink its position on amateurs getting more
spectrum?

--

Seems to me that improving the 40 meter situation (which may or may not happen
at WRC 2003) will have a heck of a lot more impact than 60 meters.

Sorry, I had to attend a ritual ceremony this weekend. Yes, it is required.

In a room without sun, everyone was facing the East direction. Many attended.
Even one American friend of my parents.

Noone knew the <full> details and significance. Only the Priest that performed
the ceremony did.

Not fun, something I had to attend.

>
> No, he didn't. Maaaaaaayyyyybbeeeeeee as an "Enviromental" Engineer.

No, I worked as a lowly Test Engineer.

Day of Butterflies
To Unknown Soldiers
25 May 2003

From the poppy fields of France, and over the beaches of Normandy, from the jungles to the desserts, Hero's have witnessed the pain of humanity. Suffering that has forever changed the souls of the living.

In our colors we carry white to signify purity and innocence, red to show hardiness and valor, and blue, the color of the Chief, to signify vigilance, perseverance and justice. The stars are a symbol of the heavens and the divine goal to which mankind has aspired from time immemorial. The stripes are symbolic of the rays of light emanating from the sun.

Rest assured, we are all descendents of war and have been granted by our ancestors the ability to create a world of peace. A world where every child can feel safe, every person can be free, and every nation can be understood.

In the darkest of night Hero's have brought forth the brightest of light. Hero's that willing and unwilling paid the ultimate sacrifice to give us the opportunity to carry on.

The seeds of liberty have been planted with faith. The seeds of freedom have been watered in blood. These seeds were planted in hope of a new day, a day when peace shall have no enemies. A day when war shall be erased and Hero's eternally honored.

When we are alone to our thoughts and seem to be trapped in this picture of death, we can remember our brothers and sisters, our husbands and wives, and our friends forever more, knowing that every seed sown has brought forth life.

Remember that day. The day of butterflies. The day of Hero's.

If it is to be, it is up to we.

None shall be forgotten.

>No, I worked as a lowly Test Engineer.

If YOU consider yourself a "lowly" test engineer. perhaps that's why you
are an unemployed person.

And NOTHING is "lowly" if it contributes to the needs of the community.
If you err as a "test" technician, then the project fails...or at least does
not progress as desired.

>Noone knew the <full> details and significance. Only the Priest that

The Military Affiliate Radio System used the 1.5 as a standard. Unless
otherwise stated by the FCC I too will use the 1.5 as a standard.

Point well taken but I don't think it's much of a product sell point.
At least not for ham gear.

Interesting thread this. We have you obviously ass over tincups
married to TT and Jim likewise with Elecrafty. Further there is
abundant evidence that the TT rcvrs and the K2 have exemplary rcvrs.
And are exemplary in all other Good Things like factory service,
upgrades via firmare revs, Made in USA stamps, competitive pricing,
etc.

How then do you explain the fact that in both cases TT xcvrs and the
K2 have such miniscule market shares? Amongst the hardcore dxers,
contesters and other weak signal wonks with deep enough pockets to buy
any radio out there?

radio out there?

Two things...Marketing and availability. Unless Mr Deep Pockets is
looking for that "satisfaction" of building the kit, he's going to want to rip
the box open, hook the antenna up and talk.

It's the Burger King generation...they want it their way, right away, and
having to stop and put it togetehr is not in their game plan,.

The artistis, craftsmen and the purists are building the K2's. They are a
dwindling few.....

What I sed was that I believe the phone band edges I cited were
established at the end of WW2, I did not say Generals could operate
down to those limits from WW2 forward.

> Point of all that is simply that an incentive system existed long before 1968.
> The period of "Generals get it all" lasted from Feb 1953 to Nov 1968 - just 16
> years and 9 months.

Incentive Licensing came along after I had it all for ~14 years, over
40% of my life in 1968. Thousands of us had to deal with it against
those kinds of histories. You didn't have a ham history in 1968 so go
away with your "just 16 years" thing. Ya newbie.

> >If I recall the details correctly the first wave of this reshuffling

> years later. I'll dig up the history and double-check.

I sed I don't remember if the phone bands got reshuffled as part of
the Incentive Licensing R&O. But I know for certain that the band edge
limits were changed at some point in that timframe. From a practical
standpoint the actual details of the dates don't matter. The net
effect was one big ball of wax, the FCC put real teeth in the
incentive to upgrade to Extra via the basic R&O plus the related phone
band edge changes.

Did you notice the reason for that? So the primary users can ID hams operating there if needed. Never mind that any digital mode should work much better than voice in emergencies. But FCC could grant us instant authority to use them if needed, I presume.

>upgrades via firmare revs, Made in USA stamps, competitive pricing,
>etc.
>
>How then do you explain the fact that in both cases TT xcvrs and the
>K2 have such miniscule market shares?

Depends what you mean by "miniscule market share"...

Here are some reasons they're not as well known as Yaecomwood:

1) Much less advertising
2) Much smaller line of products
3) Designed for niches in the market (particularly Elecraft)
4) Relative lack of rigs aimed at the raw newcomer - particularly VHF/UHF stuff.

And in the case of Elecraft, the need to build it kills off a large part of the market.

>Amongst the hardcore dxers,
>contesters and other weak signal wonks with deep enough pockets to buy
>any radio out there?

How many of them exist, really? For every one that buys an FT-1000, there's prolly a dozen FT-1000 buyers who got it just because it's the top-of-the-line

Yaesu.

IMHO I think this is a 'test'. We must pass this test. If we don't show
the 'primary' users that hams are good partners in the spectrum.....well you
```

know the rest.

If we play our cards right, don't hassle the normal inhabitants I think you will see more goodies coming down the line.

The main reason for this 60 meters request was for emergency communications. To augment our 75 and 40 meter frequencies and to allow better and more reliable commo to the Carribean area. If you think about it....5 channels should do it just fine.

Just my opinion.

>> to do all that type acceptance testing...they can just take the
>> manufacturer's WORD that they comply with the law! :-)
>
>The "type acceptance" testing is done on only a handful of units...

And there's a whole array of stuff that formerly needed FCC ID
numbers issued on submitted specs which now only needs "Certification"
which is the manufacturer swearing on a stack of spec-sheets that
the device complies with FCC standards and all units produced
meet the manufacturer's specs and both the consumer and the FCC
takes that as The Revealed Truth. Just like measuring transformer
secondary voltage by reading the nameplate.

I prefer not to mix Faith and Science. I resolved those issues
as a college student.

>Courts? Other than an FCC pink slip,

The FCC stopped issuing off-frequency notices on "pink slips" -
which were really salmon-colored - in the early 1960s. The
"advisory" Official Notices of Violation which carried no
penalties were augmented by field-issued Notices of Apparent
Liability to Monetary Forfeiture in the 1980s when the field
was finally given the ability to bypass the chair-sitters at
headquarters to get the ball rolling on levying penalties.

>why would the courts
>get involved...unless the ham cited grossly ignored and failed
>to take corrective action to eliminate an identified non compliance?

Or unless the "unadvertised enforcement special of the day" is
to bypass the Advisory Notices and go directly to levy a
monetary penalty (forfeiture) for that specific violation. Ask
the tower owners about the "unadvertised specials" that they
get hit with, such as failure to post the antenna tower
registration number at the base of the antenna tower, a far
less technical and more easily avoided problem.

If the "hardball special of thr week" is to not reduce the
penalty amount upon review and to take the case to forced
collection on refusal to pay, it does in fact go to court.
The decisions to levy the penalty and to force collection are
not in your hands.

What is the probability of the above happening? "Conventional wisdom" and "experience" say: very small indeed. But as we all learn in statistics, even if the probability of something happening is small, if it does happen to the individual, the probability of it happening to that individual is adjusted to 100%.

My advice to clients - paying or otherwise - is the same as I gave to my kids when they were growing up: be super-cautious and take steps to avoid doing something for which you can get nailed. Otherwise it's no better than being caught walking naked in the town square at high noon. What do you say then ?? (My kids would probably say "Right on, dude...." <ggg>)

>20 odd tellcos under that umbrella (i.e. NJ Bell, Illinois Bell,
>SW Bell, etc.) That was what was broken up in 1/1/84 (I mistakenly
>said 83 in my original post).

Well, as my son (who is now with SBC's Pac*Bell operation)
pointed out when I mentioned the above, they may not use the
"Bell" name but most certainly the old "Bell System" is being
soldered back together and EXCLUDING ATT - how does that grab
ya? This came up in the context of his investigating the option
of transferring from SBC/Pac*Bell to Quest (formerly US West,
formerly Pacific Northwest Bell). His seniority and benefits
as well as being considered an "inside" applicant would
transfer across the companies because that was provided for in
the "breakup" agreement. So much for "breakup". Very few
pre-breakup employees are left in the operating companies, but
those "new crop" folks who intend to make a career in the
industry appear to have the "Bell System" ethic whether they
know it or not.

And some of us do use amateur radio to enhance our other
non-amateur-radio interests. Our local rail photography group
has enough hams that we can and do use 2-m to coordinate rail
photo shoots and chases.

I'm sure that other hobbies have similar uses for amateur
radio communications.

Had it been 30 years ago, I would have eagerly built a K2 -
in those days I had been a prolific Heathkit builder and was
ready to step up to something like the K2 of today. But with
the monocular vision that I have now, a hot soldering iron is a
dangerous weapon.

The one thing that I have a need for and would like to see in a
kit or ready-made is a single-channel MF receiver with FSK
decoder....I'd even settle for a FRG7700 or similar that has HF
problems but works well around 500 kHz.

But 5 channels of USB using voice only? That can handle a limited amount of traffic under the best of conditions. Crowding of those few channels could easily occur and almost certainly will if any serious emergency use arises. With no freqwuency flexibility available things can go to pot in a hurry. Better to allow digital under emergency conditions but there would need to be lots of drill done before the actual need arose. Not the best situation but at least workable.

Aw c'mon Steve, the only "arts" involved in scrambling together a kit
radio are a decent soldering technique and the ability to follow the
assembly instructions correctly. The K2 is one replacement of sorts
for the long-gone Heathkit rigs and nobody got any gee-whiz points for
building any of those.
Besides, one can buy an already-assembled K2 from any number of
builders.

So my question remains on the table.

With Uncle Charlie ya never know. Outfit I used to work for operated
several base stations some with callsigns beginning in KAA. For many years
all the operators would sign off with "K Double A...". Then one day an FCC
rep cited one of the stations as being in violation for not properly giving the
callsign. So the signoff was changed to "K A A...."
Then a few years later a different FCC rep did just the reverse- he said it
would be better to give the callsign as had originally been done! So the chief
of communications had to write a letter requesting clarification, and the
original method was approved.

Right hand, left hand.

The Alaska special emergency frequency isn't a general allocation, so I didn't consider it in the same vein. Frankly I believe that the new 60 meter allocation is viewed about the same, though evidently we aren't restricted from using the new channels in other than emergencies. Be interesting to see what activity amounts to and how hams handle QRM issues. It's a bit tough to "slide up" a few Khz when channelized. We'll have to alter some old habits.

Because the AGC circuitry today is far more sophisticated and is much
"smarter". I believe in many instances including the Orion that the
AGC action is fully programmable. That certainly was not the case in
1970.

> >If so in 2003 then why do folk like n3rs,

No, it's because AGC ain't what it usta be.

> Do they have the RF gain all the way up when doing so?

I can't speak for others on this one but when I used the 940 I seldom
had the RF gain cranked all the way up.

The urban mythology behind full QSK has gone by the wayside too. Most
ops today prefer 8-12 mS switching delays rather than put up with the
annoyances associated with very high speed QSK.

There is no large amounts of digital traffic being done. I believe the
initial request was thinking about 'standard' phone stuff....like you hear
on 75/40 when tornados hit, etc.

I comply with the general flow of traffic unless I find myself as the only
vehicle
on the road. Posted speed limits, especially on highways, are routinely
ignored by everyone.

Where? As part of the AT&T corporate we only had central
depot type of "bench repairs" going on as far back as 1980s.

> >> >Also, FYI, Ma Bell was killed off as of 1/1/1983.

Aspects of it may be in a reconfiguration/merger phase, but
the total conglomerate that was the Bell System isn't likly
to happen...especially as to a single company providing
both direct telco services as well as equipment manufacturing
and development (IMHO).

> This came up in the context of his investigating the option

The "consent agreement" had several aspects to "protect"
employees and provide a certain degree of career and pension
portability. That has been the case since the breakup.

> So much for "breakup". Very few
> pre-breakup employees are left in the operating companies, but

> So my question remains on the table.

My read is a number of things:

1. Compare the Gee-Whiz points you get from say an Elecraft K-2, and any of the other "hot rigs" out there. It's not something you buy to impress most people.

2. Compare features. It doesn't have as many, and some are different than any other radio, such as the diagnostic functions.

3. Build it yourself? You noted you don't think all that much of assembling a kit radio. Many other people feel the same way. I don't know how much the pre-assembled ones cost, but that would cause a further erosion on points 1 and 2 above.

There really aren't all that many people who want a rig under those constraints. Kind of like Mac users. They know that they don't have as much of an "installed user base", but they don't really care. They have a good computer and do fine work with them.

As a point of consistency, it seems like the SSB bands on 5 mHz should have been Lower sideband.

Was there any rationale given for the choice of USB?

Yes- it's convention in all other services, and they wanted primary users to be able to copy and ID hams using the assigned channels. Since their HF gear is mostly capable of only USB operation it became necessary to limit us to that alsom if they were to be able to copy us hams.
Only ham radio uses LSB, and with us it's left over from the early days when it was simpler and less costly todo it that way due to equipment design. A single oscillator would allow coverage of LSB on 80 and 40 and USB on 20, 15 and 10 meters.
That was when we had only 5 HF bands. So it became convention in ham radio to use LSB on 80 and 40, USB on the higher bands, even though the original reason passed from the scene.

And yet there are those of us who truly believe that meeting FCC spec means more than swearing on a stack of spec-sheets that the equipment meets the requirements. Those of us who absoLUTely believe that putting out stuff that doesn't meet (or marginally meets) spec are still in the ballgame.

Hey, it's a bitch to meet price point with something coming in off the boat on the QT that the FCC cannot and will not enforce the rules on because they just don't have enough people. That happens. We stay out of those markets. Understand, good buddy, 10-4?

Jim

"Phil Kane" <Phil.Kane@nov.shmovz.ka.pop>
shared these priceless pearls of wisdom:

-> And there's a whole array of stuff that formerly needed FCC ID
-> numbers issued on submitted specs which now only needs "Certification"
-> which is the manufacturer swearing on a stack of spec-sheets that
-> the device complies with FCC standards and all units produced
-> meet the manufacturer's specs and both the consumer and the FCC
-> takes that as The Revealed Truth. Just like measuring transformer
-> secondary voltage by reading the nameplate.
->
-> I prefer not to mix Faith and Science. I resolved those issues
-> as a college student.

Your reasoning is flawed. The necessary offset is **not** simply equal to half the bandwidth. A 'typical' baseband SSB audio spectrum is 0.3-2.7 kHz, a bandwidth of only 2.4 kHz, with a centre frequency of 1.5 kHz, because it doesn't extend down to zero Hz.

The bandwidth of the allocated channel is irrelevant to the above calculation, although, of course, our bandwidth must be less than 2.8 kHz, not more, but that is a separate issue. The offset is the nominal centre of the audio, not of the assigned channel. Of, course knowing that NATO specifies it as 1.5 kHz doesn't hurt.

The fact that there are hams who can't follow this does indeed prove that the FCC made an actual mistake in specifying it the way they did.

It appears to me that if FCC intended their specification to be strictly
followed they would have had to specify strictly the baseband audio
characteristics and even the xmtr SSB filter characteristics. Otherwise,
finding the center of the channel will be a bit elusive.

Looks like if one lands inside the 2.8 khz passband and doesn't wander too
far outside it on speech peaks it'll have to be OK.

>
I don't think that's the real problem, Steve.

Once upon a time there were several companies offering 'serious' kits for hams - Heath, EF Johnson and Eico come to mind. A ham could save serious $$ on a rig by assembling a kit - just compare the price of a kit Ranger vs. the assembled model.

These savings were largely due to the cost of hand assembly. PCBs, wave soldering and SMTs changed all that.

Where kits compete these days is in specialized areas where the cost of wave soldering and SMT automation aren't worth it. Hence the QRP rigs, culminating in the K2.

> The artistis, craftsmen and the purists are building the K2's.

Not just that. We're homebrewing from scratch, too.

>They are a dwindling few.....
>
Not really. There are thousands of us. More every day.

There's a bunch of skills in that bag. Like being able to wind toroids according to the instructions. Alignment takes some skill and know-how. Spectrogram - what a tool!

>The K2 is one replacement of sorts
>for the long-gone Heathkit rigs and nobody got any gee-whiz points for
>building any of those.

One big difference is that the Heath stuff did not outperform the competition, except in price. An SB-301 is not a kit 75S-3. The K2 rx is up there with the best of 'em.

>Besides, one can buy an already-assembled K2 from any number of
>builders.

'zactly. There are even some who will do it for free if the buyer can't physically build it themselves.

Not really.

>I believe in many instances including the Orion that the
>AGC action is fully programmable.

Programmable how? Obviously the release time is programmable. In the '70s that was done by changing timing capacitors.

Response curve is usually as flat as the technology allows.

I can't see any reason to make attack time programmable; you want it as fast as possible. Slow attack time gives pops and blasts, which is why audio-derived AGC isn't that good even in the best implementations. Which is a major limitation of direct conversion rx's, phasing, Gingell, Tayloe or whatever.

So all you got left is AGC threshold - the point at which the AGC starts to work. Which was controlled in the olde days by turning the RF gain down with the AGC on.

> That certainly was not the case in 1970.

Solder iron vs. menu.

>> >If so in 2003 then why do folk like n3rs,
>> >k3ww, n3rd, k8mn and w3rv run CW with the AGC engaged?

>
>> Do they have the RF gain all the way up when doing so?
>
>I can't speak for others on this one but when I used the 940 I seldom

>had the RF gain cranked all the way up.

Which means the AGC wasn't working full blast. Turning down the RF gain and turning up the AF gain effectively raises the AGC threshold. A sig has to be above a certain level before the AGC starts to work. Turn it down enough and the AGC is almost turned off.
>
>The urban mythology behind full QSK has gone by the wayside too.

Where?

>Most
>ops today prefer 8-12 mS switching delays rather than put up with the
>annoyances associated with very high speed QSK.

What annoyances?

At 20 wpm, a dit is 60 mS keydown followed by at least 60 mS keyup.
At 40 wpm, a dit is 30 mS keydown followed by at least 30 mS keyup.
At 60 wpm, a dit is 20 mS keydown followed by at least 20 mS keyup.

10 mS switching delay still lets you hear between dits at 60 wpm. That fast enough for ya?

--

The new rigs are great. The old rigs are great, too. We've got more choice than ever before.

The Orion is brand-new and at the top of the market. That will naturally limit its sales.

The K2 is a kit, tiny, and not primarily an SSB rig. The basic box is QRP. All of which will naturally limit its sales.

Both are made by relatively small companies with relatively small product lines. Heck, there are generations of US hams today for whom the ham rig market has always been dominated by JA-manufactured stuff.

> Depends what you mean by "miniscule market share"...

There is only one meaning and it don't take no MBA to understand it.

> Here are some reasons they're not as well known as Yaecomwood:
>
> 1) Much less advertising

I don't know any HFer who isn't fully aware of the K2 and I don't mean
just FRCers. Ditto Ten-tec.

> 2) Much smaller line of products

I don't understand how/why that can have much impact. Lotta very
narrowly targeted companies are very successful.

> 3) Designed for niches in the market (particularly Elecraft)

A 100w 160-10 cw/ssb K2 is hardly a niche xcvr.

> 4) Relative lack of rigs aimed at the raw newcomer - particularly VHF/UHF
> stuff.

Brand allegiance is a newbie/nitwit syndrome. We'ere not talking
newbies or nitwits here, we're talking seasoned HFers, contesters and
otherwise who are quite aware of the entire range of high-performance
xcvrs and can write the check for any of 'em.

> And in the case of Elecraft, the need to build it kills off a large part of the
> market.

Assembled K2s are everywhere in the market, as you well know there are guys building them just for the jollies they get outta the soldering exercises then they dump 'em for close to the cost of the kits.

> >Amongst the hardcore dxers,
> >contesters and other weak signal wonks with deep enough pockets to buy
> >any radio out there?
>
> How many of them exist, really?

What matters is their leverage in the market, not their gross numbers.

As far as the gross numbers are concerned tune the bands on dx contest weekends. The FRC active members list is 200 long plus the inactives and both PVRC and YCCC are larger. Plus all the rest of the heaps of contest clubs plus all the independents like Dave.

> For every one that buys an FT-1000, there's
> prolly a dozen FT-1000 buyers who got it just because it's the top-of-the-line
> Yaesu.

Agreed, but the contesters are well known to be extremely fussy especially about rcvrs and the JAs bend over backward to meet their needs because they have a strong influence in the high-end market.

I'm not intentionally trying to stick pins in the K2 & Ten-tec balloons here just to be a pain in the ass, fact is that I'm quite baffled at the low acceptance rate these rigs have in the overall top end market. So I tossed a note to a couple of the heavy-duty dx conetsters and asked them point blank why they haven't gone with a K2-100 or an Omni.

I've only gotten one response back so far. That one sez that the K2 does not appear to be supported by the contest loggers and other third party contesting & rig control software & station accessories. It also seems to suffer a "QRP" image. Some of of the problems I have personally with the K2 are the lack of even a second VFO let alone a complete second rcvr on top of being a ham bands only rig. The K2 "display" is ridiculous by today's expectations. How do ya get on 60M with a K2?? The K2 is a minimalist's delight but it goes 'way too far in that direction for most folks taste including mine, the only fix Elecraft has for the K2 is a K3.

As far as Orions go they have a lost a lotta points for shabby mechanicals, instabilities, lousy calibration, birdies and some other lackings.

But we'll see. Famed One K3WW popped the coin for an Orion at the Dayton 'fest. There's a breakthrough and I'm gonna be all over it. Another one N3RD is on his way to an IC-7800. Both have been vocal MP

adherents. This is gonna be the shootout from hell, I'll letcha know .
.

I absolutely agree with that.

> 2. Compare features. It doesn't have as many, and some are different
> than any other radio, such as the diagnostic functions.

The diagnostics are in the K2 to provide the instrumentation required
to test & align the radio during assembly. They would not be in the
rig if it was not a kit. But the diagnostics are still there after
assembly for later use if necessary which is a very nice feature.

> 3. Build it yourself? You noted you don't think all that much of

> further erosion on points 1 and 2 above.

It doesn't take much poking around to find a well-done assembled K2
for the cost of the kit, or often for less. Kit rigs have always taken
depreciation beatings, they're all lousy investments from a CPA's
perspective.

> There really aren't all that many people who want a rig under those

Good analogy. The Mac O/S is well known to be more robust than any of
the iterations of Windoze. But the big problem with Macs, despite it's
"front end" superiority is it's lack of industrial-strength apps,

i.e., in the case of the K2 it's shortage of capabilities and
conveniences.

Time for another war story: I also have monocular vision. Looks like the difference between your's and mine is that I was born with the problem. In my case my brain apparently went to work at some very tender age and generated some kinda weird workarounds. When I took my two military physicals I drove the eye test guys nuts, the second one being a USAF light colonel and opthalmologist. I could not make a mistake in any of the depth perception tests. No matter how hard they tried to "undo" me.

Comments like "Uncle is NOT gonna deal with your weird vision Kelly, forget it." followed, so poof, out the gate and back on the bricks landed me.

While my arms aren't quite long enough these days I can nonetheless even handle diddling SMT thingeys with a soddering arn without breaking (much of) a sweat.

Sometimes it pays to be born screwed up.

I can see and respect your POV, Phil...HOWEVER, there's not a whole heckuva
lot that'll convince me that:

1. NAL's that put the onus on the accused to prove their innocense or pay a kilobuck fine (Please don't compare this to the traffic ticket process, it's insulting.) -or-

2. Denying an RM proposal that the "commish" admits has the support of the majority of the affected constituency AND has minimal (If any.) affect on any other group other than said constituency.

...even remotely resembles what our forefathers envisioned in "checks & balances" wrt one government entity acting in all three capacities...legislative, executive, and judicial.

> >This would be a good thing if the "commish's" legislative process were

Read what I posted, Phil. I believe we both have good points. The truly just answer likely lies somewhere in between.

> What other "checks and balances" are you thinking of?

Legislative...Voters => Representative => Bill => Law
Executive...Law enforcement nabs those who've alledgedly broken the law.
Judicial...Innocent until proven guilty? (Er, that'd be before a "real" judge in a court of law as opposed to an "administrative" judge whose bread is not buttered by the same agency who wants a $ from a kilobuck NAL.)

I sincerely hope that you do not misunderstand my feelings as "ant-FCC," because I'm not. I just don't think ALL is doene "above-board" and could be improved. Conversely, I do not think you're an "apologist," nor do I think you're entirely objective.

> impress most people.

You've been reading too many Vipulposts, Mike. Buying or even building a rig to impress people is a waste of time. Particularly "preety fems".

Most folks buy/build because:

1) it's fun (to them, anyway)
2) they want to use the end result on the air
3) under some circumstances, it saves money
4) they cannot buy the whoozis ready-made

Of course there are exceptions, like the folks who want the latest or top-of-the-line whoozis simply because it IS latest or top-of-the-line whoozis.

Then there are the non-amateurs who will criticize you no matter what you decide to buy or build. ;-)

A lot depends on how you value your time, too. If you enjoy building, a kit is much fun and can "save" money. If you work a salaried job and there is not a big radio slush fund, that "saved" money can be a big deal.

But if you don't enjoy building and could spend those hours being paid overtime at a job, the result is just the opposite. If a kit takes 30 hours to build, test and align, and you could be making just $25 per hour after taxes, that kit price just jumped $750. OUCH!

> 2. Compare features. It doesn't have as many, and some are different
> than any other radio, such as the diagnostic functions.

The designers chose different tradeoffs. Both the Orion and the K2 are basically ham-bands-only boxes (Orion has general coverage in the sub-receiver only). This was done to maximize ham-band performance. Some folks accept the tradeoff, others don't. Somebody who spends a lot of time SWLing isn't going to be satisfied with a K2.

The main reason I homebrewed (that is, designed and built from scratch) most of my own HF rigs for the past 35+ years is that I could not get the performance/feature combo I wanted for the price I was willing/able to pay. The K2 changed all that. btw, the last non-homebrew HF rig I had as a "main station" was a TT Argosy. Nice little rig but the non-defeatable audio-derived AGC was poor, the tuning rate was too fast (18 kHz/turn) and it only put out 50 watts max. That was 1984. Things have come along a bit since then.....

> 3. Build it yourself? You noted you don't think all that much of
> assembling a kit radio. Many other people feel the same way. I don't
> know how much the pre-assembled ones cost, but that would cause a
> further erosion on points 1 and 2 above.

You can't buy a factory pre-assembled K2. But there are people who will build one for you, either for a price or for free. (See builders' list on their website).
>
>There really aren't all that many people who want a rig under those
> constraints.

HEY! ;-)

Actually, EVERY rig is full of tradeoffs. Many sacrifice performance in order to include more features or to reach a certain price level. Many if not most are not really user-serviceable unless you have a source of factory info and parts, and if the factory stops supporting your model, tough noogies. Styling and ergonomics are in the eye/hand of the beholder. Etc.

> Kind of like Mac users.

Now you're getting downright insulting! ;-)

> They know that they don't have as
> much of an "installed user base", but they don't really care. They have
> a good computer and do fine work with them.
>
Seriously, there's a big difference. Mac users pay higher prices for equivalent functionality, and sacrifice compatibility to get it. Different ham rigs don't have that problem unless you're in an SO2R-type situation.

And let's face it, not many Orion owners are going to put their rigs in a tent on Field Day and let any and all comers operate them...

The really cool thing is that we have so many choices.

--

btw, my main home PC was built from various scrounged parts. I think the modem and CD-ROM burner were the only things bought new - and those were both heavily discounted items. Spent less than $75 on the whole thing. Does the job.

Right. The AGC is there when I need it keep from blasting the
headphones off me ears when I bump into a boomer. Which was not the
case in my Collins days. The AGC "pumped" something fierce on 80 & 40
particularly with the 75A4 even with the RF gain turned down.
Definitely not the case with the 940 and to a large extent the TS-50
is also better in this respect than the A4.

> >The urban mythology behind full QSK has gone by the wayside too.

All over. See below.

> >Most
> >ops today prefer 8-12 mS switching delays rather than put up with the
> >annoyances associated with very high speed QSK.

>
> What annoyances?

Hearing everything out there between dits is annoying as hell. The
"quasi QSK" speed is adjustable even in my weenie TS-50 and I have it
set to some speed which allows me to hear not between dits but only
between characters at my usual 25-30 wpm.

I spent a full day at the N3RS multi-multi a couple weeks ago and he
runs QSK the same way I do but with big amps too. Like the $6k Acom
2000As they use. These amps do not have "QSK", but what they do have
today is vacuum relay PTT switching vs. the old open relays used in
days of yore. These relays are plenty fast enough to allow somebody to
break between characters but not fast enough to interrupt the
transmission of a character. In other words he lets the amp's PTT
relay speeds set the QSK speeds.

Much simpler and easier to deal with, a lot less fatiguing during the
long hauls in the contests and nobody misses a breakin. Which is all
that actualy matters. Both he and I have had high-speed QSK in the
past and both of us eventually and independently came to the
conclusion that it's not the smart way to go.

> 10 mS switching delay still lets you hear between dits at 60 wpm. That fast
> enough for ya?

Seems I slipped a decimal point. Bad Brian.

Hearing between dits at 60 WPM is exactly what no savvy op wants,
lotta headphone clutter which does nothin' for nobody.

> The Orion is brand-new and at the top of the market. That will naturally limit
> its sales.

Overall certainly but that's not the point. It won't be price limited
within it's market, it'll be performance, quality and acceptance
limited given the rigs it competes with in that market. This one will
be worth watching.

We may see a new twist to "minimum power necessary to conduct the desired communicastion" rule. The "desired communication" can no longer be to put a 40db over S-9 signal into the other ham's receiver!

Some of us got our first taste of 2 way radio with CB, with its channelized
frequencies and limited power. So 5 MHz is not totally unfamiliar. We'll
change channels if the QRM gets bad enough.

Yes, but when there are only 5 channels the chances of finding one vacant is pretty well nil. If the one you're getting clobberred on is loaded most likely all 5 will be.

5167.5 Khz, an Alaska State Trooper's inter-service freq which is also
monitored by the Coast Guard, the FAA and the DoD military. It's
actually one of about ten SSB freqs around that channel, some channels
being for S&R purposes, others for commercial purposes by remote
hunting lodges, offshore fishing vessels, etc. They even have
completely packaged "Alaska Type Accepted" 40W rigs-to-go and conduct
daily day/nite net drills.

The fast vacuum relays can switch as fast as a few mS. Trouble is, they are
only good for a few million operations. Lessee, at 30 wpm, one minute of
"PARIS" is 520 operations. A million operations takes less than 2000 hours of
transmitting at 30 wpm.

Depends on what you are doing. In traffic handling and ragchewing it's neat to
just touch the key when a letter is missed and the other guy stops right away,
you get the fill, and off ya go. For the pileups and contests its a different
game, particularly if you're holding a freq.

MP 14 - former PRR Main Line

which reminds me of a story....

'bout 15 years ago, the Strasburg RR got permission to do a doublehead steam
fantrip from Lancaster to Phila and back on a summer Sunday, via the Main Line.
Which line is also used by modern electric stainless-steel SEPTA commuter
trains. I had a couple of young relatives at the time who wanted to see the
steam train, so we trooped over to the local commuter station about 3 pm and

waited on the platform for the special to go by. The two old steamers would be working hard because it's uphill all the way from Philly to Paoli and they had about 14 coaches to pull. And those coaches were full!

Just as we reach the station, I hear the whistle blow off to the east. Wind was from the west that day, so it wasn't far off. Commuter trains have horns, not whistles, so I knew we'd gotten there just in time.

While we're waiting on the platform, a very proper lady arrives, looks down the track, and asks when the next train will be along. I tell her about two minutes, but it won't stop at this station.

"Hmpf!" she says. "Young man, don't you know all trains on this line are locals on Sunday? It will stop!"

I figured it was useless to argue, so I said no more. A few minutes later, a headlight appears on the outbound local track.

"There, young man!" says the lady. "Here's my train!"

And here came the special with the throttle to the roof, belching steam and smoke and going at least 60 mph. Roared right by in a flash of steam, fire, varnish and hot exhaust. Engineer showed us he really knew how to use the whistle, too.

The little ones were suitably impressed. I don't know what the lady thought, but her expression was priceless.

Next time I'll bring a camera.

ATT Regional HQ, San Francisco. Most of the stuff that they repaired, though, were peripherals and laptops used by RHQ personnel. Then they moved to San Ramon, where I used to have lunch with him when I visited PacBell Mobile who rented one floor of the ATT RHQ building. He progressed to doing IT cabling, hardware, and software upgrades, which he is now doing back in SF with SBC as a crew chief.

Not bad for a kid who was born dyslexic and suffered brain damage (destruction of areas which control short term memory) in a traffic accident when he was a teenager. His "side business" is repairing and restoring bicycles - check out his "Lee" ads in "Bicycletrader".

OR - not pay anything and force the FCC take it to the Justice
Department for collection, which requires the Government to
file suit in U S District Court. You get a _trial de novo_
which means that the Government has to start from zero and prove
each and every element of the violation. You get your day in
the kind of court that you describe. The FCC and the Justice
Department are not going to go through that process unless the
case is air-tight. That was a large part my job in latter
years - to make sure that those cases which were passed on were
air-tight on evidence or we wouldn't pass them on.

>2. Denying an RM proposal that the "commish" admits has the support of the
>majority of the affected constituency AND has minimal (If any.) affect on
>any other group other than said constituency.

That's within the discretion of the Commission but anyone who
doesn't like it can take one of several appeal routes. The
non-amateur-radio services do that quite often.

>> What other "checks and balances" are you thinking of?
>
>Legislative...Voters => Representative => Bill => Law

The FCC can only issue regulations and take actions that
conform to the powers that the legislative has granted it
and that the judiciary has allowed the agency to exercise. That
is the basis of administrative law.

The Congress does not want to be bothered by lawmaking and
regulation of that sort, and therefore delegated it to the
regulatory agencies such as the FCC. You had better bet,
though, that when it comes to major policy issues such as

broadcast ownership or wireless and telephone networking
issues, The Congress is right there putting its head in where
it doesn't fit.

>Executive...Law enforcement nabs those who've alledgedly broken the law.
>Judicial...Innocent until proven guilty? (Er, that'd be before a "real"
>judge in a court of law as opposed to an "administrative" judge whose bread
>is not buttered by the same agency who wants a $ from a kilobuck NAL.)

First of all, the FCC does not get to keep one cent of any
funds collected through the Forfeiture, spectrum auction, or
license fee processes. It all goes directly into the Treasury.
The FCC never even gets its hands on it - it is sent directly
to a Treasury bank lockbox operation even though the mail
address says "FCC".

Secondly, I have prepared many cases for submuittal to, and
appeared in some before, Administrative Law Judges and if you
think that the ALJs are biased toward the Commission's actions
or personnel, I have a bridge that I would like to sell you.
It feels like the Commission, rather than the licensee, is on
trial most of the time.

They are a harder sell than those which you refer to as "real
judges" and they want to avoid any appearance of bias because
their decisions are appealable to the full Commission and thence
to the U S Court of Appeals and no judge wants to be reversed on
appeal because of "bias".

> > Got on CW, I bet....

You guys got it wrong. I ripped the Orion out of the box, hooked up an antenna, connected the amplifier, turned it on and read the manual. Then I sat for two evenings listening only and marveling at the new rig's capabilities. On the third evening, I made a couple of CW QSOs and the following night, I put the Orion on SSB for the first time.

To Brian's question about the Ten-Tec and Elecraft markets in comparison to Japan's big three: I ran a C-line when others were using TS-820's and FT-102's. I ran a TR-7 when others were using TS-930's and FT-1's. I ran a Paragon when others were running TS-940's and FT-1000D's. I ran an Omni VI when others were running TS-950's and FT-1000MP's. Now I run an Orion when others are running IC-756 Pro II's and FT-1000MP Fields. I require my rigs to have good receivers. I looked at the specs of the Orion and I looked at the specs of its Japanese competition. Based on the specs, there was only one logical choice. The question which begs asking at the moment is: What are the others guys thinking when they choose a Japanese rig with lots of chrome and nuttin' under the hood?

Lest you think my choice is coloring my view of the Orion, here are a few recent quotes from the Ten-Tec reflector:

From Tom W7QF (Orion in WPX 'test):

"I operated some in the contest also. Wow what a receiver! I was able to completely eliminate a 40 over 9 signal 600 hz away by using the 250 hz roofing filter, DSP set to 100 Hz and the notch and copy with ease an S3 signal. No pumping of AGC or anything in the background. Just nice clean single signal copy!"

"I was also able to completely eliminate an S8 to S9 signal 100 Hz away from and S3 signal. Never been able to do that before. I was shocked

when I tuned down a few Hz and all of a sudden the other signal was there."

"Never heard any IMD or any "junk" in the background on a clear frequency with the band full of 30 and 40 over 9 signals."

From Carl N4PY (Orion in the WPX 'test):

"I was also doing some Orion experimenting during the contest on the bottom of 40 meters. Between 7.000 and 7.006 there must have been 3 or 4 s9+20 signals. What I was trying to do was find a very small hole amoung these signals where I could use a tight filter and see how well the Orion would perform. What I found was to me truely amazing. I was using a DSP filter of 170 hertz and the tentec 219 250 hertz filter. There is a 12 db insertion loss on the 250 filter, so when I engaged the 250 I also turned on the preamp to make up for the difference. First of all, I was easily able to hear and copy some S3 signals in this zone. The Orion has the ability to knock out the unwanted signals and produce a clear, quiet, zone in between. Anyway, I could not find any noticeable difference of adding the 250 filter to the 170 DSP. I was surprised at this and tried to be very careful to see if I could tell. But adding the preamp to make up for the insertion loss made the background noise sound identical to not having the roofing filter. There may be cases where the roofing filter helps over having the 1 K standard but I haven't found one yet."

From Earl K6SE (Orion in the WPX 'test):

"Curious to see how the receiver would perform in a crowded band with a lot of strong signals, I forced the widest roofing filter (20kHz) to be active no matter what the DSP bandwidth was set to. I was surprised that stations 500Hz apart were easily separated when using a DSP BW of 300Hz. Switching to the 500Hz roofing filter seem to make no difference in that respect. At no time did I ever hear any of the chirps and birdies that you hear on other radios with poorer IMDDR3, even with the roofing filter set to 20kHz. All of my listening was done with the preamp turned on."

Whet your interest any? You might want to take a look at Doug Smith's article on the programmable AGC at http://www.doug-smith.net/digitalagc.htm

What I'm trying to get across to you is that you should sell the car, take a second mortgage on the house, tell the kids that they'll have to work their way through college but order an Orion.

I'm not sure I agree. I see a few big guns choosing a rig and a bunch
of yes men taking the word of the few. It's the old, "K1AR has an
FT-1000MP Mk V and he does really well. If I buy the same rig, I can do
really well" syndrome. A professional photographer might use a Rolli to
take his great shots. I might buy the same camera and take terrible
photos.

writes:

>
> If one had 2 Q's in their callsign, could you say KA1K Double Q ?

Interesting question. A few years ago, I had a "problem" with a repeater
user who was signing "[prefix]3Triple-A." My assumption was that his
call sign was [prefix]3TA, since he was using the phonetic word "triple"
instead just saying the letter 'T'. However, he clarified that his call sign
was, in fact, [prefix]3AAA, but he was just shortening it to "Triple A."
Well, you can imagine what went on from there. Since he didn't live in
my county, I took no action. I did inform the ARRL Official Observer
in his area, but I never learned what became of it.

It is my assumption that in voice modes, the call sign must be given in
a plain, clear manner which would not create any confusion. Therefore,
I'd say that "KA1K Double Q" or " [prefix]3TripleA" would not be legal
identifications, due to the possible confusion if the substituted words
"Double" or "Triple" were taken literally as meaning "D" or "T." If I
ever heard a call sign like "KB3TripleZulu," I'd assume that his call sign
was KB3TZ, NOT KB3ZZZ. Phonetics are intended to be words that
are substituted for letters, in order to eliminate confusion. Using a
word to enumerate repeated letters would only create confusion.
Therefore, I would consider this to be illegal identification, and that it
was possibly being done to deliberately obfuscate the identity of the
station.

In '94 the xyl and I had the opportunity to take a railfan excursion on the BN mainline riding Southern Railway coaches pulled by Frisco 1522, a 4-6-4 steamer owned by the Museum of Transportation in St Louis which had been taken out of retirement and refurbished for excursion use.
(it has since been re-retired due to escalating insurance and maintnance costs).
Twas a very memorable ride. I took along an 8mm camcorder and got lots of great footage. They even stopped in a rural area, let passengers who wanted photos disembark, backed the train out of sight, then did a photo run-by.
Very neat.

BTW, one of the memories etched into my brain as a child is of watching the daily Current River Branch Line trsin of the Frisco steam across a small trestle (looked huge to a 6 year old) as I walked the two miles to school each morning.

And if you ever get to Cheyenne, Wyoming, drop off I-80 onto Lincolnway and drive by the city park. It's where the lone remaining example of Union Pacific's Big Boy is set up on display. That's the huge 4-8-8-4 specially built to cross the Rockies

between Cheyenne and Ogden, Utah. It's 132 feet long.
Of only 25 built, it's the only one left in existance.
I got some great digital photos.

My neat xyl's birthday present to me this year was a set of steam train videos. By pure coincidence, the first train shown was pulled by a Big Boy!
And I had thought I'd never get to see one in action!

Sure. But one of the strengths of ham radio has always been the ability to set up wherever one can find a clear frequency, and move to find one when necessary. Even though emergencies do take precedence that doesn't assure that any of the 5 channels will be available for emergency use at any given time. Early in an emergency before the word gets out they are likely to be overeloaded with routine use and thus too cluttered to use.

You must be mistaken, cloaked man of mystery. I'm much taller than 5'9".

Does it seem to you that the denizens of this newsgroup are legends in their own minds because they've had a variety of life experiences? Why, you must have some sort of inferiority complex or you might really be inferior. After all, you aren't even assertive enough to post your own name.

Now scuttle back under your bed like a good chap.

If one had 2 Q's in their callsign, say KA1KQQ, could you say KA1K Double Q ?

What about "Sec. 97.401 Operation during a disaster" or "Sec. 97.403
Safety of life and protection of property" or "Sec. 97.405 Station in
distress" as possible variants to use morse code on those frequencies???
One of them has gotta apply in some case or another....

I would inadvertantly copy the above call signs as: KDA..., and
KA1KDQ.

If it were customary to insert the word "single" prior to the single
use of a letter, then the confusion of "double" would go away, except
in programming where "single" is single precision - a number.

Life would be simpler if people just said it as it appears on their
license.

Is that too hard?

> take his great shots. I might buy the same camera and take terrible
> photos.

That's undoubtedly true in some cases. But the guys I listen to are
the long-time EEs in this bunch and are the big guns who set the pace.
They're not technical slouches as their career successes clearly
indicate, when prodded they'll take technical discussions right down
to the chip level in a wink. They're also grouchy as hell and as far
as they're concerned there is no such thing as a "best" rcvr and
they'll punch holes in any of ï¿½em at will.

Then they'll switch modes and come off with "Hey, to hell with the
long-winded discussions about frigging BDRs and intercept point
details, all of ï¿½em work good enough." I tend to agree with the prior
mindset for the most part. There are common sense limits to how much
time I'll spend diddling the ins & outs of technical trivia when it's
the operator and antennas which have the far greater impact on contest
performance.

> > I've only gotten one response back so far. That one sez that the K2

>
> Not supported by contest loggers? Third party contesting and rig control
> software? This guy has to be breathing pure oxygen.

Ya gotta take into account the environment, the framework in which
contest club members work. We do not operate in splendid isolation
from atop a mountain in West Nirvana. It's a matter of standardization

and mutual support in a very complex sort of network which involves logging, rig control, packet and Spider spots and other issues. There are big advantages in using "club standard" software. Historically FRCers have run CT but are slowly migrating to Writelog. Writelog does not support K2s, end of the probabability of FRCers taking a K2 into the dx contests on this basis alone. No doubt Jim will find this appalling but that's the way it is.

Beats me but viva la Orion. I venture to guess that TT has listened to the bitching about it's previous offerings and taken 'em to heart.

> I'll be interested to see the IC-7800 full specs and even more

Not really, Phil, hence my "no comment." What I do know of Satchel Page is that he was an outstanding pitcher who got his start in the old Negro League back in the 30's.(?) He eventually became a Cleveland Indian and helped them win the pennant. A quick google search yielded the followin quote by Mr. Paige below. He wa also somewhat of a showboat; the Muhammad Ali of basesball, you might say.

"Never let your head hang down. Never give up and sit down and grieve. Find another way. And don't pray when it rains if you don't pray when the sun shines."
-Satchel Paige

Please expand upon your reference. I didn't/don't want to infer the wrong message.

There is always a best receiver...of the moment. That crown may only be
worn until the next "best receiver" hits the market.

> Then they'll switch modes and come off with "Hey, to hell with the

Nothing is quite so frustrating as finding yourself "equipment limited",
all other things being nearly equal. I wouldn't want to be the TS-50
guy in a world of TS-940's.

Most of my multi-multi experience runs back to the paper logging,
sneaker net days of N9MM (from the W9ZRX QTH). At OH2HE (OH2E, OH2U), a
CT network was run but nobody gave a rat's patootie about rig control as
long as accurate logs could be viewed by all and we had communications
between the various operating positions.

> Historically
> FRCers have run CT but are slowly migrating to Writelog. Writelog does

> appalling but that's the way it is.

The Finns are rather evenly split between CT and TR. I have both but
tend to rely on CT. To the issue of transceiver control software, I'd
lean on the logging software author to include support for my radio
rather than buying a radio based on compatibility with software.

From the Orion specifications sheet:

"SSB sensitivity: <0.18 ï¿½V for 10 dB SINAD at 2.4 kHz BW, pre-amp on typical"

"Internal birdies: None stronger than specified sensitivity."

If they're lying about the specs, I haven't yet found one of the birdies.

You now have two good reasons for road trips. My guess? That you won't find nearly $7,000 of difference between the two.

Definitively resolved: AGC today ain't what it was in 1970 so AGC = ON
when running CW has become SOP.

Dead sacred cow #1.

> Heck, I was running full QSK more than 30 years ago with my homebrew stuff. And
> it wasn't new then. Fast keying relay and an electronic TR switch. Cat's meow
> for traffic handling or ragchewing.

Yeah . . so . . OK . . I wuz running QSK 40 years ago and with an amp
to boot and in the dx bashes, not into lame exercises like NTS and
shooting the breeze. Do I get post points for that? Din think so.

> >Hearing everything out there between dits is annoying as hell.
>
> To you and some others, maybe.

If you poke around you'll probably find that yer "some others" is
probably 95% of us these days.

You can't be serious with this one, you did this tongue-in-cheek
right?!

2000 hours, pounding brass for 40 hours per week for an entire year??
Even it was ever done on the ham bands what's the big deal about
swapping out a couple relays once a year?

> >Hearing between dits at 60 WPM is exactly what no savvy op wants,

>
> Depends on what you are doing. In traffic handling and ragchewing it's neat to
> just touch the key when a letter is missed and the other guy stops right away,
> you get the fill, and off ya go.

Really? Ya learn something new every day around here . . (?!)

> For the pileups and contests its a different
> game, particularly if you're holding a freq.

I dunno how ya came up with this one but there is no difference
whatsoever, the QSK speed selected by the op is the speed he/she is
comfortable with and applies across the board. Unless you know
somebody who jiggles the speed when moving from shooting the breeze to
NTS or contesting for instance.

My point is and has been that over time the former quest for very high
QSK has lost favor because it's downsides exceed the value of what
little if any advantage it has.

Dead sacred cow #2.

That's undoubtedly true in many cases. Lotta good contest ops are not
techos. But the guys I listen to are the long-time EEs in this bunch
and are the big guns who set the pace. They're not technical slouches
as their career successes clearly indicate, when prodded they'll take
technical discussions right down to the chip level in a wink. They're
also grouchy as hell and as far as they're concerned there is no such
thing as a "best" rcvr, they'll punch holes in any of ï¿½em at will.

Then they'll switch modes and come off with "Hey, to hell with the
long-winded discussions about frigging BDRs and intercept point
details, all of ï¿½em work good enough." I tend to agree with the prior
mindset for the most part. There are common sense limits on how much
time anybody should spend diddling the ins & outs of technical trivia
when it's the operator and antennas which have the far greater impact
on contest performance.

> > I've only gotten one response back so far. That one sez that the K2

> software? This guy has to be breathing pure oxygen.

Ya gotta take into account the environment, the framework in which
contest club members work. We do not operate in splendid isolation
from atop a mountain in West Nirvana. It's a matter of standardization

and mutual support in a very complex sort of network which involves logging, rig control, packet and Spider spots and other issues. There are big advantages in using "club standard" software. Historically FRCers have run CT but are slowly migrating to Writelog. Neither CT or Writelog support K2s, end of the likelihood of FRCers taking a K2 into the dx contests on this basis alone. No doubt Jim will find this appalling but that's the way it is.

Beats me but viva la Orion. I venture to guess that TT has listened to the bitching about it's previous offerings and taken 'em to heart. Can only be good. BTW it's not unusual for small companies to crank out an occasional "Monday morning (whatever)", quality control is more difficult in these cases.

> I'll be interested to see the IC-7800 full specs and even more
> interested to see who buys one.

You betchum, the next year gotta be interesting. I'll have both an Orion and a 7800 less than a hour's drive from here. You bet I will.

> nuttin' under the hood?

Isn't that sorta like the guys who have only ever owned Fords sitting
around the bar beasting on Chebbys?

Nuttin' under the hood eh? Not-so-hypothetical scenario: One guy has
say an Omni6+. 'Nother guy in the same neighborhood has the same
antennas and same set of operating skills and an MP. Both jump into a
dx contest and go at it. Come the end of the contest the guy with the
Omni obviously has to have have beaten the guy with the MP,
absolutely has to be, yes?

> Lest you think my choice is coloring my view of the Orion, here are a
> few recent quotes from the Ten-Tec reflector:
>
> From Tom W7QF (Orion in WPX 'test):

Hmmmm . . Beyond the useful tech support reflectors provide they offer
a lotta humor content for those of us don't marry our radios or their
brands. The reflectors are goofy lovefests. A gazillion guys patting
each other's backs and congratulating each other for being brilliant
enough to have some offscale can't-be-touched beats-all radio or
another. "Wow guys, lookit what I did last nite with my Belchfire Pro
III after I retuned the flam baffles!" Or better yet "Who could
possibly be stupid enough to buy anthing but a Belchfire?"

I've logged in silently, gotten my giggles, logged out. The K2
reflector is *really* bad in this respect. The huggy-kissy content is

enought to make ya wanna puke.

The reflectors are the worst places on the planet to find the warts
which are the first things I look for in a radio. You'll have to
excuse my dim view of the things as far as being a source for unbiased
opinions.

> Whet your interest any? You might want to take a look at Doug Smith's

Dick,
I have to disagree. Regardless of how much they are in use and/or
overloaded, those using the channels for non-emergency purposes
MUST surrender the frequencies when an emergency is indicated.
Towards that, I believe 99% of hams would immediately
accomodate the emergency priority use and stop their
current "routine" use.

Cheers,
Bill K2UNK

1812. RRAP Contest Challenge?

Newsgroup: rec.radio.amateur.policy

Since there seems to be a bit of interest amongst several of the members in contesting, how about a challenge?

No prizes or plaques since it's unlikely we'll ever be in one place at one time...just bragging rights until the next 'test?

How about we pick two or three different tests and then limit it to single op/single tx, and then we let the scores in CQ/QST be the milestone? Call it the RRAP Challenge Cup, best 2 out of three aggregate scores?

Hope this finds everyone well today. It's a darn pretty day today.

in some cases it is faster to say the phonetics than the section name.
"Western Massachusettes" is harder than saying w-m-a, and whiskey-mike-alfa
is probably about the same as the whole name... and for some sections its
better to spell it out than let the other guy guess at the abbreviation for
the log. you would be amazed at how many people don't know that 'me' is
maine and 'ma' is massachusetts, let alone sort out the valleys in
california!

Being "overloaded" would mean that there would be users close to the
station in distress, and be able to hear him well enough to cut thru the
QRM. And soon the other hams further away will realize that there's
an emergency happening, and stop transmitting but stay listening in
case someone is in a position to help in some way.

I would think that in a 'real event' any method of maintaining commo to/from
an area would not be a problem.

I know I'll use whatever means are available to me to maintain commo. If
its cw, or digital...matters not. Just get the job done.

Then worry about the 'consequences'.

I hope your right Bill. I had a incident where the FCC declaired a specific frequency for emergency comm in tornado situation. I asked a station to give us some room (2 kc up). He then proceeded to jump right on top of the net and call me and everyone there a liar.

Takes all kinds.

>
> Then howcum ya bought a K2?

Lotsa reasons but they all boil down to this:

"Cause I wanted one and I figured out a way to afford it."

And those are really the driving forces behind most amateur radio
spending decisions. Which is why you don't see a lot of hams lugging
SINGCARS units around.

The clueless can lecture us forever about what hams should be doing,
how our technology should "progress", how the "professionals" do it,
yada, yada, yada ad infinitum, and in the end we'll go out and buy,
build and/or assemble our stations based on what we want and how much
we can afford.

> > I've owned and used TT stuff and have always rated it above Ikensu.
>

How many FT-1000s have been sold in the past 3 years? There are over
3500 K2s out there.

> > Here are some reasons they're not as well known as Yaecomwood:
> >
> > 1) Much less advertising

>
> I don't know any HFer who isn't fully aware of the K2 and I don't mean
> just FRCers. Ditto Ten-tec.

"Aware" is not the same as "thinking about buying". Not only does
Ikensu do lots of advertising in the ham rags, they have lots of
dealers plugging their stuff. Thumb through the various ham mags,
visit a dealer or a dealer website and see what is front and center.
TT and Elecraft don't have anything like that saturation.
>
> > 2) Much smaller line of products
>
> I don't understand how/why that can have much impact. Lotta very
> narrowly targeted companies are very successful.

The main market in HF rigs is the 100 watt SSB/CW xcvr. Elecraft makes
one model that fits that description (K2/100). TT makes three models
(Jupiter, Pegasus, Orion). I've lost track of how many models each of
the Big Three makes.

> > 3) Designed for niches in the market (particularly Elecraft)
>
> A 100w 160-10 cw/ssb K2 is hardly a niche xcvr.

Sure it is. How many hams will spend the time and money to build one?

> > 4) Relative lack of rigs aimed at the raw newcomer - particularly VHF/UHF

> otherwise who are quite aware of the entire range of high-performance
> xcvrs and can write the check for any of 'em.

Not as many of those folks as you might think, compared to the great
unwashed masses of us who do not have huge antenna farms and the
resources to buy, say, an FT-1000.

Used gear, you say? How much do you have in that '940, and how much is
it worth now in its present condition?
>
> > And in the case of Elecraft, the need to build it kills off a large part of > > the
market.
>
> Assembled K2s are everywhere in the market, as you well know there are
> guys building them just for the jollies they get outta the soldering
> exercises then they dump 'em for close to the cost of the kits.

The market isn't flooded with used ones, and they tend to go for close
to the new price. There's a QRP one on eBay right now, bid is at $599.
With the listed options it cost the builder maybe $750. It's got a low
S/N but looks good. I would not be surprised if it went quite a bit
higher.

>
> > >Amongst the hardcore dxers,

> especially about rcvrs and the JAs bend over backward to meet their
> needs because they have a strong influence in the high-end market.

Been that way forever. Which is one way that the DX/contest crowd
justifies its existence in a big way. It wasn't the ragchewers who
pushed the dynamic range numbers up.
>
> I'm not intentionally trying to stick pins in the K2 & Ten-tec
> balloons here just to be a pain in the ass, fact is that I'm quite
> baffled at the low acceptance rate these rigs have in the overall top
> end market.

As good as the K2 is, do you really think many of the big guns are
going to hook an under-$1k rig to their big antenna systems for CQWW
or ARRL DX?

W4BP was the op at NP2B. He used a pair of K2/100s in SO2R last SS.
Came in second place in the class. But SS is a weenie contest, some
say....

> So I tossed a note to a couple of the heavy-duty dx
> conetsters and asked them point blank why they haven't gone with a
> K2-100 or an Omni.
>
> I've only gotten one response back so far. That one sez that the K2
> does not appear to be supported by the contest loggers and other third
> party contesting & rig control software & station accessories.

That's not right. K2s have been used with various softwares including Writelog since at least 2000. They use the Kenwood command set. K2 can be almost completely PC controlled.

Of course some folks want the screen to say what the rig really is, not what it's emulating.

> It also seems to suffer a "QRP" image.

And you say "Brand allegiance is a newbie/nitwit syndrome."? "QRP image" is just another term for it.

> Some of of the problems I have
> personally with the K2 are the lack of even a second VFO let alone a
> complete second rcvr on top of being a ham bands only rig.

As you noted elsewhere, it has two VFOs and memories.

Second receiver? Just buy a second K2 and run SO2R. General coverage? You gonna listen to BBC during the contest?

> The K2
> "display" is ridiculous by today's expectations.

Do you really expect a little rig that cost $600 in its basic form to have all the bells and whistles of rigs costing 2-3 times that much, AND the rx performance that beats 99% of the market? Get real!

> How do ya get on 60M with a K2??

There's an accessory for that (K60XV) on the way. How many contests are there on 60? We got 5 channels, fer goshsakes.

> The K2 is a minimalist's delight but it goes 'way too far
> in that direction for most folks taste including mine, the only fix
> Elecraft has for the K2 is a K3.

The whole point of the K2 and K1 is to be different. No way a little CA outfit is gonna beat Yaecomwood at their own game, so they found a part of the market that Yaecomwood was ignoring. Just like Southgate Radio did many years ago.
>
> As far as Orions go they have a lost a lotta points for shabby

Like I said...

> Another one N3RD is on his way to an IC-7800. Both have been vocal MP
> adherents. This is gonna be the shootout from hell, I'll letcha know .

And in the end, in that arena where cost isn't even a secondary consideration, one criterion will decide: Which rig made the most points? To the really big guns, that's the bottom line.

What's interesting to note is that the NTIA was the first agency to
suggest a 5 MHz ham band; I believe that was back in 1997.

(Len Over 21) writes:
> NO OOK CW! :-) USB only, VOICE!

Here's why:

"Additionally, the FCC has restricted operation to USB only, with a maximum effective radiated power (ERP) of 50 W. The USB-only requirement stemmed from NTIA interoperability concerns. The NTIA wanted to make sure that federal government users could copy and, if necessary, identify any amateur station using one of the 60-meter channels. As a result, the 60-meter frequencies will become the only ones available to the general amateur community that do not permit CW operation."

These guys don't churn radios at all. Not the top guns. The two I'm
closest to bought 940s when they were new on the scene in the early
80s then after beating the crap out those for years bought MPs. Around
ten years per xcvr. They get their money's worth and then some. It's
far more important to them to have rigs which have been completely
debugged and which they can operate by reflex / on autopilot than it
is to have the latest and greatest. Since they crank out tens of
thousands of contacts per year and consistently make the boxes with
their collections of "old junkers" it's kinda difficult to convince
ï¿½em they just gotta buy new radios every two years.

> Nothing is quite so frustrating as finding yourself "equipment limited",
> all other things being nearly equal. I wouldn't want to be the TS-50
> guy in a world of TS-940's.

Not if you have what I call a "balanced station". I'll take myself as
an example. For the present the only antennas I can put up is some low
dipoles. I am not gonna go out and buy an Omni or an MP or any other
xcvr in that category and waste the resources ya gotta put into a rig
like those when all I have is TS-50 level antennas. Would be like
buying a Corvette to go grocery shopping twice a week. Thus I've
bought into being a TS-50 station in a world of 940s and I'm
comfortable with the limitations. But come the day when I get some
beams up and 80 & 160 antennas I'll be all over some high-end xcvr.

>
> Most of my multi-multi experience runs back to the paper logging,

> CT network was run but nobody gave a rat's patootie about rig control as
> long as accurate logs could be viewed by all and we had communications
> between the various operating positions.

That changes a bunch when the spots come into play. In this situation all club stations are on the same overhead network and the need for software rig contol becomes a gotta-have. The only shot I have at a half-decent score is to play the search & pounce game so even I'll have Writelog rig control running here as a lame single op with the 847.

> The Finns are rather evenly split between CT and TR. I have both but
> tend to rely on CT. To the issue of transceiver control software, I'd
> lean on the logging software author to include support for my radio
> rather than buying a radio based on compatibility with software.

Absolutely, not even a discussion. Dunno much abt TR or NA but CT and Writelog both support TT xcvrs along with all the JA gear. TT is not oblivious to the fact that it's in their best interest to provide the tech info to the software writers so Omni support is probably already in both or is close. It's up to Elecraft and the K2 owners to do the leaning if they wanna join the parade.

I can't believe they expect to get that kinda money for a ham xcvr, that's idiotic. No you bet there won't be a $7k difference in performance. Reminds me of the Signal One debacle. The far more interesting subject will be K3WW's Omni. If he kicks butt in the battle of the boxes with a TT rig like he has been doing with his Brand X rigs it's gonna attract a *lot* of attention.

> absolutetly has to be, yes?

I don't think you're being fair to yourself in setting your
hyptothetical even though we know that two ops aren't really going to
have the same operating skills. One guy might be a whiz at handling
rapid fire QSOs but he might be on the wrong band. The other guy might
be a propagation whiz. To make your scenario slightly better, the guy
with the MP would have his rig rise about a foot-and-a-half off the
table with keying from the nearby Omni VI+ when the receiver of the MP
folded up. Things might even out though: The guy with the Omni would

have to deal with the key clicks from the MP :)

The Ten-Tec reflector is just as bad. There are a number of technically
astute fellows whose opinions I value. When they comment, I read
thoroughly. Scott W4PA from TT often responds to comments. The
huggy-kissy content is balanced by several of those characters
complaining about knob eccentricity and font style/size.

> The reflectors are the worst places on the planet to find the warts
> which are the first things I look for in a radio. You'll have to
> excuse my dim view of the things as far as being a source for unbiased
> opinions.

You'll have to remember that a certain K2 made some rather blunt
criticism of the Orion's software and vowed to return the rig. His
"pal" forwarded the note to the reflector and yours truly e-mailed
Ten-Tec and bought the to-be-returned rig. Of course the K2's gripes
were addressed in the next firmware release. :)

Well, you don't really need a car. Don't they have good public transit
in your area?

> All joshing & jousting aside best of luck with Baby.

I don't make reflector exchanges patting myself on the back for my
choice. I'm simply enjoying the use of the best rig I've ever owned.

Go have a listen to K3WW's at first opportunity!

You could say whatever you want, but each letter has to be
separate when it's "legal ID" time and the phonetics, if used,
must be such that the letter is readily identifiable in the
English language. At least that was what the book said when I
checked it last.

>
> I've only gotten one response back so far. That one sez that the K2
> does not appear to be supported by the contest loggers and other third
> party contesting & rig control software & station accessories.

The K2 is supported by virtually ALL contesting and regular logging programs, either directly or via our Kenwood command set compatibility. CT, NA, TR, DXBase and almost all other logging programs work well with the K2. Tree, of TR fame, uses a K2 along with Trey - N6KO, James - 9V1YC, Rick - N6XI and Kenny - K2KW, who has used K2s with Team Vertical at 6Y2A to set several world records the past two years.

>It also seems to suffer a "QRP" image.

The K2/100 has been out for over a year and has sold thousands. I guess we'll have to work harder on publicizing this! ;^)

> Some of of the problems I have
> personally with the K2 are the lack of even a second VFO let alone a
> complete second rcvr on top of being a ham bands only rig.

The K2 does have two VFOs and can easily run split, along with memories. The impressive receive numbers of the K2 are a direct result of its ham band optimized receiver. (Actually it does overlap to 80% or more of the SW bands on RX.) A general coverage receiver has a difficult time getting good receive specs at a reasonable price.

> How do ya get on 60M with a K2??

Easily. We have already designed a simple add in option for the K2 that adds 60M. We were only waiting for the FCC to announce the actual frequencies to release it. Note also that many radios that appear to offer general coverage transmit will not meet FCC harmonic specifications when operated on transmit outside of the current ham

bands, including 60M, due to the requirement for close in low pass filters.

For an excellent contester's review from the last NCJ see:
http://www.elecraft.com/TechNotes/ncjk2100.pdf

For a DXer's perspective from QEX magazine see:
http://www.arrl.org/tis/info/pdf/020910qex036.pdf

And the recent CQ magazine review:
http://www.elecraft.com/TechNotes/CQ_K2_100_Review.pdf

And the original QST review and advanced test report:
http://www.arrl.org/tis/info/pdf/0003069.pdf
http://www.arrl.org/tis/info/pdf/k2.pdf

For additional reviews and customer comments see:
http://www.elecraft.com/K2__Ham_Comments.htm

And a good RX comparison table of ARRL lab numbers is at:
http://www.elecraft.com/K2_perf.htm

We're always looking for ways to improve the K2. We're flattered to be compared to $3,500 - $4,000 radios like the Orion and $10,000 radios like the ICOM 7800. Not bad company to be in! ;^)

Some Hams I met a few weeks ago could do very well in a food eating contest.

I saw an eating contest on television. They had different contests for certain
foods - butter, eggs, hot dogs, other foods. Each food's special eating
challenges were discussed. Not surprisingly, many of the people that entered
were fat. Surprisingly, one skinny person won a few of the events.

Did you know it takes more energy to heat a room when there is a greater volume
of people (in other words, more fat people) in the room? I was told this by an
Engineer'g. Prof.

How about a contest for setup and/or takedown time of a station with certain capabilities? Should require generator power. Also should have strong wind stability.

Why, both of course!

Shhhh! I'm trying to sucker Steve and am rushing to complete the power supply for the pair of 8930's. No fancy stacked or H-framed yagis here though--just a single boomer at about 55 feet.

You could actually do pretty well from there even with lower power and smaller antennas given the amount of activity right there in the East Coast VHF/UHF corridor. We have the easy pickin's in Cincinnati, Columbus, Cleveland, Pittsburgh and the couple of big boys to the SE of me here in the Mountain State. For everything else, I have to work.

Go ahead and start one. If you're the only entrant, you'll win!

Alternatively, you can just partcipate in Field Day in about a month.
It has most of what you're looking for.

That's correct but the Orion, it isn't necessary to reduce the RF gain
at all for great AGC action.

I've already given you the Doug Smith article URL so I've saved the
PROFESSIONAL the trouble of looking it up and doing a cut and paste.

I was glad, by the way, to see the post from Eric of Elecraft here. The
company has to be proud of the performance they've managed to pack in a
small and reasonably priced box.

I'm not going to make any manufacturer rich either. I owned the Paragon
for six years before buying the Omni VI and I owned the Omni VI for a
full ten years. Goose, W8AV up in Ohio Amish country to my northwest
has a shack full of TS-940's for his multi-multi setup.

That was my dream and I'm happy that we found a place where I could make it come true on a modest scale. My antenna farm would have been considered super in the 1960's and 1970's. Nowadays it seems pretty commonplace. It got scaled back a few notches when I realized that I'd be moving into the age group where maintaining three 70 to 100 foot towers with stacked monobanders would become impractical. Thus the trapless tribander, nothing with gain on 80m and the modest Cushcraft "shorty forty" on the two towers. One tower has the Hazer and the other cranks down and tilts over. I can work on that stuff for years yet.

I'll have to make a pilgrimage one of these days to one of the big PVRC or FRC multi-multis. One famed OH2 I know visited a large East Coast (non-FRC) multi-multi one year while I was living in Finland and came away with the idea that the operation was a total goat rope.

> The only shot I have at a

If it is compatible with the Kenwood driver, should be no problem. The
Paragon used to work with the Icom IC-735 drivers for logging programs.

Earlier reports of that price may have been incorrect. The latest TT
reflector scuttlebutt mentions something about $7k list and $6k street
price. If true, that makes it only about twice as expensive as an
Orion. By the way, would you have been more tempted to buy if they
called it, as one wag suggested, the O'Ryan?

I can remember a time about 25 years or a little more back in time when
I was already a seasoned contester and DXer. I bought used gear and had
some wires and a small tribander on a pushup mast because it is what I
could afford.

Agreed. I don't think that many of the ragchewers can tell difference
between nor do I think that many of 'em use anywhere near all the
capabilities of that a high end rig offers. Internet surfers and word
processor users don't drive increases in computer processor and graphics
speed and sound card capabilities. Gamers do.

> > It also seems to suffer a "QRP" image.

I'll give it a test drive in one of the fall events if I can keep the
knobs from falling off. Sure hope I can hear some DX through the
birdies.

I dunno. You seem as if you could be a really crazy anonymous-type
person. I'm not too worried about you coming to my door, ringing my
bell or BLAM!!, blowing my head clean off. My name and address are
listed numerous places including the telephone book.
I use my call on the air. Maybe I should use someone else's call lest
some really crazy person come to my door.

> The Patriot

You surely do write like that really crazy Lloyd person.

IF yuo assume that all users are involved in, or at least aware of, te emergency. I think we can assume from experience that such won't be the case and many will yak on.

Boy you invited yourself into a real bag of worms. There would be a
huge problem with the scoring.

Lemmee give you an example: Take two contests, Field Day (assuming you
consider FD a real contest) and either of the CQ Worldwide DX
contests. Assume ya really hump and ya make 750 CW contacts running
100W. The score would be 750 times 2 points for CW contacts times 2
points for operating in the under 150W class. Not counting any bonus
points the total score would be 3,000 points.

Now take the CQ WW. Say ya work 50 dx stations in an hour or so which
is no biggie. Of those 50 ya only worked 10 countries in 6 WAZ zones.
That's 3,000 points already and ya haven't even gotten warmed up.

That ain't gonna work . . .

You're completely correct, of course. Trying to develop a handicap that
would level the playing field would be horrendous.

I was just trying to stimulate some activitiy on the air by RRAP'ers.
It's been a while since i've had a chance to work anyone from the NG and
thought a bit of playful challenge might get some folks moving.

On a more serious note, I >>AM<< considering a trip to VO-land for
sweepstakes this year, altho I don't know if I want to go for CW or fone
weekend.

I'm not sure what your point is, Dave. I was simply saying that
top-end rigs like the Orion are not a realistic option for the vast
majority of hams. 'RV's talking about the folks who are not only
interested but who can write the check. I'm not one of 'em - yet.

Agreed. Many of the features are contest/DX specific anyway. Heck, for
ragchewing a 2-B and Ranger setup is just about ideal. Or an HW-101.
Add a Courier amp/SB-200 for some wattage.

> Internet surfers and word

Not any amp you can buy. Base model only puts out 10-15 watts. btw,
its QSK time is programmable so those who don't want to hear between
dits at 60 per don't have to.

Naw, some ideas:

1) Compare points earned in a given contest only

2) Compare percentile rank in the class of entry, regardless of
contest.

3) Make up a cumulative score based on the above. Enter more contests
and score more percentile points.
>
> I was just trying to stimulate some activitiy on the air by RRAP'ers.

See ya on 7037 CW.

> How about a contest for setup and/or takedown time of a station with certain
> capabilities?

We have that already. It's called Field Day. Also the VHF contests
where mountaintopping is popular.

FD rules require that all setup must take place no earlier than 24
hours before the start of the contest. Which means that in EDST you
can't begin setup until 2 PM Friday.

The operating part of FD is done to prove the capabilities. How do you
know what a station's capabilities are unless it is actually used on
the air?

For several years I ran FD single-handed. Class 1B-1. With my homebrew
100 watt station, tent, generator, mast, the whole works. Site was an
open field with no facilities other than grass, which I had to mow in
order to have a place for the tent, generator and 44 foot homebrew
mast. No usable trees or buildings. Put it all up myself in a few
hours and took it all down again afterward. Site was 73 miles from
home and had to bring everything to the site and back in a 15 year old
VW Rabbit. Setup took about 5 hours and takedown about half that.

Best score I ever did was 2980 points - 629 CW and 11 phone QSOs. The
'phone QSOs were on 2m simplex. That year it drizzled rain almost the
whole time (no lightning, thank heaven). Had a LOT of fun that year.
Burned up a lot of calories, too.

Let's see you beat that, Vipul. Including things like raising a 44
foot mast that can hold a wire antenna with no help.

> Should require generator power.

Why? Most generators are noisy, heavy and require lots of fuel, and
they don't promote energy conservation. Battery/solar will do the job
- why not use the best technology?

If you insist on genset power, though, I know the unit I'd use. Takes
about a minute to set up.

> Also should have strong wind stability.

Sounds like hot air to me.

That's good news and corrects a misimpression on the part of a buddy
of mine. I understand that the Kenwood command set is the most robust
& stable of the bunch. Is that info in yer website? Where is that info
in the Writelog site? Why not?

> >It also seems to suffer a "QRP" image.
>
> The K2/100 has been out for over a year and has sold thousands. I
> guess we'll have to work harder on publicizing this! ;^)

I think he meant "QRP image" in a broader sense, as in "It's a cute
little thing BUT . . " My take is that all kit rigs power output
aside have historically had that problem and they deserved it. You've
broken that mold with the K2 but it's still lumped in into that
category. Yeah, more missionary work is indicated. HRO has worked the
big contest clubs for the JA stuff. It works.

I blew that one.

> The impressive receive numbers of the K2 are a direct
> result of its ham band optimized receiver. (Actually it does overlap
> to 80% or more of the SW bands on RX.) A general coverage receiver has
> a difficult time getting good receive specs at a reasonable price.

Thoroughly understood. Ten-tec follows the same design philosophy and
both you and Ten-tec are technically correct. The problem with the
approach is that the prospective buyer has to make tradeoffs based on
what matters most to him/her. Incrementally better performance within
the ham bands or SWL and other bells & whistles? I'll spare you my
usual diatribe on this subject but I'll pit my $600 admittedly lame
100w TS-50 underdash HF rig with it's DC to 30Mhz rcvr against a
K2/100 in any cw dx contest any time given the same antennas. The guy
with the K2 is not gonna make many if any contacts I can't make
because he has a rcvr with a better front end. The effects of rcvr
circuit differences will be buried in all the rest of the variables
which come into play.

> filters.

It's even worse than that. You can toast the PA in many xcvrs if they
are operated in certain portions of the HF spectrum. In any event
you've addressed the 60M problem and answered the question.

> like the ICOM 7800. Not bad company to be in! ;^)

Heh. The brawl never ends. Actually though an Orion can be had for
under $3,500 and watch for HRO to be selling 7800s for around $6k.
Before the coupons appear. I can't imagine where they get their MBAs,
they're nuts.

I'm actually much more interested in your plans for the future than I
am the K2. Ten-tec started out pretty much like you did, a couple
smart designers, a few inexpansive QRP kits, direct marketing, the
whole nine yards. Typical U.S. entrepreneurial founding of dynasties
we have everywhere today. How far are you gonna take it?

And how are ya doing with the K3 ?

The same thing could happen if I met a REALLY CRAZY PERSON walking from the parking lot to my work. Or anything else, anywhere else.

FACT: The internet is no more dangerous than driving to work in the morning - much less in fact.

The only part of your post I would agree to is that yes, it would be possible to offend an unbalanced individual to the point of contemplating harm. Best idea is that we use the manners our folks taught us and don't be so impolite.

Also, don't make the mistake of thinking that using a handle grants anonymity.

Lotta activity north & south but we hit the wall east-wall, you live
on the other side of the wall. The little FT-847 operates on 6/2/432
all modes, 100/50/50W out. I bought a Diamond nine-foot triband glass
stick antenna for it along with some 9913 and a vent pipe mount. I
need to dredge up a ladder and get it up and running. Oughta get me at
least started. If I like what I hear on cw & ssb I'll move on to small
beams.

Yew are absolutely right there. I'll tellya how bad that can get.
Within the club there are well-known differences amongst the guest ops
who run in the multi-multis. You'll find "classified ads" in the
reflector like "W3ABC needs two runners for the CQ phone." Runners &
pouncers, different critters.

> To make your scenario slightly better, the guy
> with the MP would have his rig rise about a foot-and-a-half off the

I doubt it. Copied-pasted from from another e-mailed missive I
recieved:

w3rv: "The Ten-Tec Omni 6+ supposedly has a rcvr which noticeably
better than any of the FT-1000 series and any of the big Icoms."

Response from MP owner: "I'm not convinced of this claim. My
neighbor, K3WU has one of these rigs and his signal is all over the
place! Lot's of harmonics and very hard keying. He hears less well

than I do, much less better."

. . . so there . . !

Ya shoulda peddled more five-pin tube sockets and waited until ya had
a bigger wad before ya leaped on the K2. Can't tell you how often I've
refused to settle for a lesser rig and bided my time until I could
afford the rig I wanted.

> And those are really the driving forces behind most amateur radio

Got plenty of time with straight MPs, I'll letcha know after I check
out k3ww's Onion.

> > There is only one meaning and it don't take no MBA to understand it.
>
> How many FT-1000s have been sold in the past 3 years? There are over
> 3500 K2s out there.

Nobody knows because those stats are closely held. But I'd bet the
farm on my guess that over the years FT-1000s have outsold the K2 by
at least one order of magnitude, probably more. There are thousnads of
'em in Japan and Europe alone. I'll also bet that the K2 will hit
saturation and die and/or be replaced long before it catches up with
the FT-1000s.

> > I don't know any HFer who isn't fully aware of the K2 and I don't mean

I think you're giving the advertising too much credit and not giving
hams in general enough credit for being able to tear and compare.
Particularly when it comes to experienced HFers.

> > A 100w 160-10 cw/ssb K2 is hardly a niche xcvr.
>
> Sure it is. How many hams will spend the time and money to build one?

I would if it wasn't so bloody Spartan.

>
> Used gear, you say? How much do you have in that '940, and how much is
> it worth now in its present condition?

$1,400 a number of years ago. It's toast for the moment. What's any of
it have to do with anything in this thread?

> The market isn't flooded with used ones, and they tend to go for close
> to the new price. There's a QRP one on eBay right now, bid is at $599.
> With the listed options it cost the builder maybe $750. It's got a low

Right again and I straightened it out with them.

> > It also seems to suffer a "QRP" image.
>
> And you say "Brand allegiance is a newbie/nitwit syndrome."? "QRP
> image" is just another term for it.

It ain't that simple, see my response to Eric for both the above.

> Second receiver? Just buy a second K2 and run SO2R.

I ain't about to do the first one let alone a second one.

> General coverage?
> You gonna listen to BBC during the contest?

Rumors to the contrary I do a helluva lot more with my gear than just
go contesting with it. Yes I do listen to the BBC and I expect to be
able to do that without having to have multiple HF radios and I'm
willing to pay for that capability.

> > The K2
> > "display" is ridiculous by today's expectations.
>
> Do you really expect a little rig that cost $600 in its basic form to
> have all the bells and whistles of rigs costing 2-3 times that much,
> AND the rx performance that beats 99% of the market? Get real!

Yes I certainly do expect a decent display in a $600 xcvr. Can't have
a decent display because they cost too much you say? Baloney. The
TS-50 display shows the operating freq, RIT offset, s-meter, agc
speed, mode and other parameters. All shown simultaneously. More to
the point my FT-1500M 2m mobile rig also displays all it's operating
parameters simultaneously AND the display is programmable, I can
jiggle it to show that the .195 machine is in Newtown Square for
instance. All for a lousy $139.95 new. Your turn to get real.

> The whole point of the K2 and K1 is to be different. No way a little

I simply reguritated statements made by knowledgable others, period.

>
> And in the end, in that arena where cost isn't even a secondary

> consideration, one criterion will decide: Which rig made the most
> points? To the really big guns, that's the bottom line.

Damn, you do think in straight lines. Life ain't a straight line and neither are the routes hams follow to come to purchase decisions. The big guns (and most of the rest of us) make their purchase decisions based on a whole slew of considerations. Rigs don't make points, dx contest operators make the points and given any of a number of possible choices of upscale rigs their scores will be so close together that any differences in the scores from rig to rig will be in the noise level.

Field Day. Antennas. Ah'm gone Good Buddy, ten fowah?

Agreed, but when no one uses a mode you suddenly find you need, who you gonna talk to? No one will be monitoring or otherwise listening in any mode except USB, so you can call till you're blue in the face on any other and all you're likely to get for a response is "Hey that dummy doesn't know that you're supposed to use only USB on this band!".

I've seen flourescent lights operated with car power in parades. I would like
to know how they use one's car as power.

>> Also should have strong wind stability.
>
>Sounds like hot air to me.

Believe it or not, the random group of Hams I met a few weeks ago did indeed
plan for windy conditions. I got to see some of their adaptations for the wind.

And heavy winds were there that weekend, even the whole night. The setup lasted
under those windy conditions.

Why would you imagine no cow? Remember, I joined a RANDOM group of Hams.

Also, I mentioned some of the items consumed in an earlier post. Some meat items included hamburgers, chili (with beef), bacon, sausage, ham, chicken, shrimp, and more. Seems like you would be very happy there.

Stealing toilet paper? Man, what is this world coming to? Speaking of Dayton, how was it? I've never been there yet (maybe some day). Used to always hear hams on 2 meters talking of their adventures. Haven't heard a peep on radio thus far, but it helps if one flips the power button to "on".

So is the rest of Field Day.

Are you willing to start paying people to do the things you want them to do?

You're forgetting the most important point: The only way to KNOW what the capabilities of a station are is to actually operate it. Not only to prove that everyhting works, but to find out how well it actually works under real world conditions.

I suspect you don't like those real-world conditions....
>

I think there's a big difference, however, with the 5MHz channels.
Both the FCC and NTIA stand a much greater chance of hearing
the situation where a ham didn't surrender the channel to emergency
use which could then result in the ham being cited. It may well
be that those channels could be tape recorded on a continuos ongoing
basis at various points to provide a definitive record of how hams are
actually using the channels once they can do so. Monitoring 5 channels
is a piece of cake these days as there is recording equipment capable of
recording many separate audio feeds.

Personally, I'd love to knowthat there was such oversight, at least
initially and/or upon request if a specific ham abuser is ID'd.

Cheers,
Bill K2UNK

Common sense. You got your money's worth. There are churners out there
though.

> Goose, W8AV up in Ohio Amish country to my northwest
> has a shack full of TS-940's for his multi-multi setup.

Great xcvrs, a real classic. I've had one for several years. Has all
the options except the voice card and is loaded with Inrads. Bought it
from PVRCer w4rw. But I've only managed to get one good six-month
period of heavy use out of it and one Field Day. Did not take long to
get very attached to it. It's a piece of cake to operate yet it has
bells & whistles galore. The passband tuning and variable bandwith
setup is a dream come true. If ya can't dredge a weak one up out of
the crud with a 940 it can't be done except maybe in the case of a
Sherwood R-4C on 160 & 80. The front end shows the K2 folk how the big
boys can play the BDRs game when they choose to do so. And it was
designed well over twenty years ago.

I put it on the air last FD and three contacts into the event it
completely lost it mind. Works fine on ssb, goes absolutely
silly-bonkers on cw and that terminated FD 2002 for me. I haven't
packed it off to the Kenwood shop yet but I gotta get around to that.
Then I'm gonna offload it. Superb radio but it's full of creaky old
point-to-point wiring, parts are quickly becoming unavailable, etc.
It's time.

I shoulda taken the TS-50 to the FD site with the 940 but I ran outta
patience with hauling "stuff". This time I'm going with both the 847

and the TS-50, I yam not gonna get caught with my pants down again.

You've done well. I've seen the .JPGs of your "modest" antenna farm. I only wish!

Smart moves. Father Time is creeping up on many the big guns I keep referencing and they still have the multiple 150 footers. They're now paying arms and legs to commercial tower mechanics to keep their antenna farms up and running. Back when any number of us usta scamper up and down the things like monkeys weather be damned. Dunno how many hours I spent dangling from nothing at 150-180 feet horsing full size 40M beams around but dozens. Today? Fuhgeddit - not me 'ole buddy, those days are over, hit the Yellow Pages and start dialing around.

You need to do that. From where you are W3LPL should be the first stop ya make. He's a pile of contesting history by himself. You'd enjoy a visit to N3RS. His Telrex 3 el 40 is 150 feet above a 150 foot cliff and looms over the PA turnpike two minutes before the Downingtown interchange headed East. There are others. Let me know when the urge overcomes you.

As a bit of an aside I think you'd be amazed at the volume of homebrewing these guys do. They don't reinvent the wheel and brew the radios but they do brew just about everything else. You ougta see some of the beams they come up with. N3RS has a 5 over over 5 over 5 self-designed & built stack on 15M, fifteen elements. Then come the hombrewed station control systems. CPUs, sensors, preamps, filters, you'd have to see it to believe it. Packaged in nice one-off

enclosures with custom silk-screened panels. No, hombrewing is not
dead.

> One famed OH2 I know visited a large East Coast

What's a "goat rope"??! Haywired? Yeah, they're out there. FD stations
with big amps.

Unassisted is certainly an option. I gotta at least try operating
assisted, maybe I'll like it, maybe I won't. I'm OK with operating
unassisted because my scores have always lopsided, higher mults/q's
ratio than average. I'm not a big-time runner but I usually did well
with the mults.

The K2 uses the Kenwood command set per several spankings I got. It
would be nice if Elecraft & Writelog sed so in their websites.
Especially when there are guys out there saying that the mainstream
loggers don't support the K2.

Looks like the K2 reflector has that kind of "factory participation &
support" too. 'Tis good. We should live long enough to see the guys
who design the rice boxes jump into a U.S. based rig reflector.

(IC-7800)
>

That makes a lot more sense. It'll probably gravitate down into the
$4-4.5k range. I think my FT-847 lists for $2300, I paid HRO $1200 for
it.

A resounding yes. You can spend yer life nit-picking yer way thru xcvr
technical specs like we've been doing here, then pop $4k on the latest
& greatest wunderbox and when it's all said and done it's the op which
is the biggest variable.

> - Mike KB3EIA - who does his contesting with a lowly IC-745.......

If your 745 works for you it works, end of.

That's hobbies for you! My XYL has a saying about people who get huge trucks with huge tires, massive amateur telescopes, and monster towers. Something about other parts being inversely porportional.....

But back to the contesting, I have been amazed at comparing my scores as I have "matured". I'm not winning yet (tho' I did place third in my class in NEQP last year, and helped move my club to second in it's class in last years FD) but I think I just might in a few more years!

heh, heh, ... I don't get it

Answer me this. I have used my real name and email addy since day one.

How come:
I only get a few pieces of spam a day. I include the email I get from
infected computers in that number. Most of the others come from
scattershot approaches due to the way my employer sets email - initials,
a number, and of course the domain. Some of these spammers are sending
out email to every mjc5 on the net as well as every other combo the
spammers can think of. Not much I can do about that.

The crazies haven't hit me yet. They could you know. My phone number is in the book, my name and addy can be looked up on the ARRL, FCC, QRZ, whoever's databases. Unless a person cuts themselves off from the world and lives in a cabin without any utilities and grows their own food, etc., they are broadcasting to the world who and where they are.

Be careful what you wish for - we just may get it. And the
consequences may go far beyond citing the ham involved. The entire ARS
gets a black eye under such circumstances. It would be kinda hard to
justify our allocations if other services who want them can play tapes
of hams not knowing how to behave properly on the air.

Yes. believe it......some hams are SO F-CKING CHEAP
that they will steal toilet paper at the hamfests. I've seen
it at Shelby NC. Dayton was a washout. Rained all
weekend, outside tailgaters left on saturday and whoever
was left had obscenly high prices for radios. One guy
wanted $300 for a 20 year old Tempo 2020 HF rig.
Ha Ha Ha! good luck finding a sucker for that "sweet
deal" - he should have tried e-Bay, more suckers and
shill-bid auctions per mouse click than you'll ever find!
As fo us, this is/was the LAST YEAR we will ever goto
Dayton. It's too damm expensive and too much of a
hassle to get into and out of the Hara Arena. No fun.

Wait a minute here.....I don't even follow that. First off if your in the
USB mode and someone comes up on say...CW...you can tell the mode. Or say
on PSK, or RTTY, or packet.

If one is not operational in most to all of the common modes he should stick
to the general rag chewing and talk about the weather.

I also hope folks in the right places monitor these 'channels'. I also hope they hear, record, send a NAL to and collect the fines. In fact that would also be nice if they did that on 14.313 and other spots.

But ya know sumtin? I just dont think its gonna happen. I hope Im wrong.

Yes there's some risk, but it would be great to get rid of a few
of the extremist jerks. The ARS would benefit greatly (IMHO).

Cheers,
Bill K2UNK

1900. is H.A.A.R.P. doing this?

Has anyone else noticed how pityful conditions have been on HF since around 1997 when H.A.A.R.P. fired up? Especially in summertime when the bands basically die.

Go to http://www.haarp.alaska.edu and get an education on what their up to.

I have operated HF radio since 1961, in several places on this globe. Not only ham but military too. And I can not EVER remember such crummy summertime propagation. And that included peaks and nulls of the sunspot cycle.

I am aware that right now we are in the middle of a 'solar burp'. But think about it. Or am I just being paranoid?

Dan/W4NTI

Dan,

I'd bet on B:)

If you consider how many transmitters are running on this ol' planet ... forget VLF and LF ... start with MF and many commercial broadcast stations running perhaps from 250 watts to 50,000 watts. Then go up and there are many international broadcast stations which run more than a couple of watts. Amateurs, although fairly low power, are on the air daily from MF to SHF and beyond. CB is running on the high end of HF. Some of those stations run a tad more than 5 or 10 watts. Next comes commercial television stations; in the USA, channel two runs between 56 and 60 MHz and they are definitely *not* low power. Next comes commercial FM broadcasting in the USA from 88 to 108 MHz. UHF television is not known for low erp. These are mostly fairly high power stations and a *lot* of them. 3,000,000 watts erp is a drop in the bucket. Heck, back in the HF days for the military, it wasn't unusual to come up with a million watts erp. Tack 40 or 50 kilowatts into the optimized center of a big rhombic with 15+ dB gain or so ... That one rhombic I remember was 200 feet in the air, 600 feet on a leg, and located over salt water. A formidable sky hook, indeed! Phone patches were run with excellent copy at 20 watts out of a homebrew transistor rig.

Be aware if you are going after certificates that amateur equipment and propagation seem to have a 'necessity detector'. The more you want and need another state/country/grid ... the less everything cooperates with you :)

Good antennas should help more than the latest fancy radio. Kilowatt
linears help too.
Also operating skill should make a difference.....

>
>
> - Mike KB3EIA - who does his contesting with a lowly IC-745.......

All you really need is a decent front end (atmospheric noise is higher than
noise inside a modern radio anyway) and a reasonable transmitter with
correctly adjusted processing. Having a 5 element 80 meter yagi helps
too..... :-) (Heard that someone in Australia actually has such a
monster).

One thing about the new 5Mhz channels, top power is about that produced
by a "barefoot" modern transceiver with some slightly lossy coax and dipole
antenna. So most everyone will have an equal chance to be the first
to do WAS on 5. Assuming someone in North Dakota gets on 5.....

What are you talking about? HF conditions are related to the ionosphere and the Sun. Right now there is a major solar flare effecting HF conditions. Although 6 meters has been open and so has 10 meters for short periods because of E-skip. Do some basic reading on the Van Allen Belts, the Ionosphere, the Sun and understanding HF propagation. You might as well as blame poor HF propagation conditions on UFO's and Bigfoot instead of HAARP!
;)

>>Its for "fun".
>
>So is the rest of Field Day.

Boring to some. Fun for Hams, maybe.

>You're forgetting the most important point: The only way to KNOW what the
>capabilities of a station are is to actually operate it.

Yes, thats standard Ham radio hype. You don't need Field Day to operate your
radio.

>I suspect you don't like those real-world conditions...

Field day is not "real-world" conditions. The Hams I met up with, operated
under more difficult conditions including strong winds. The purpose of Field
Day is not for "real-world" conditions. Anything learned in that aspect is
chance correlation.

>I've had to put up with a lot of wind from the likes of you and some
>others...

Since you keep bringing up wind. I could mention that the random group of Hams
I joined were skilled in passing wind. Of course, the chili helped. As you
know, they ate ALOT. Also, they were well prepared for their station. However,
it seems, they were not prepared for taking a shower.

The way I read their web pages, they don't punch a hole in the
ionosphere so much as massage the power density of a small region of
the ionosphere. After playing with their calculator, I've found that
the ionospheric area their stuff affects ranges from eighty square
kilometers at the E layer to twelve hundred square kilometers above
the F2 layer. That will have an effect on a portion of the northern
hemisphere (and thus, on signals that would bounce across that
portion), but the net result would appear to be a strengthening of the
ionosphere in that volume of space, not a weakening.

I was disappointed that no mention of this side effect was mentioned
on their FAQ page. Their primary reference to amateur radio and
interference had to do with transmitting on the amateur bands.

But none of this will help any ham who finds himself needing to use those channels to handle emergency traffic NOW.

Maybe next time. Maybe.

So if you hear someone on 60 meters using some mode other than USB,
and you have no idea that he has an emergency, what will be your initial
response? Most will react as above -"That dummy is using the wrong mode for this
band!" Few if any will fire up on his mode to see what's going on.

In the case of Big Wheel trucks well, OK, I think they're a bit silly
and sure there's a macho issue involved. In the cases of the guys I
know who have big telescopes & towers I've noticed that they don't
seem to have problems reproducing. In volume in several instances.
They gotta be doing something besides radio with their vertical
things.

This has got nothing to do with observations or opinions. It has to do
with you not telling the truth. One can express an opinon contrary to others
beliefs, and not be untruthful.

"I think Amateur Radio is a cult" is an opinion. I do not agree with it,
but in this context I appreciate your opinion.

"Amateur Radio is a cult" is a false assertion. It HAS been disproven.
To reassert it over and over in the face of contraindicating evidence makes it
a lie.

"I did not try to hide my identity" as uttered by you is false. Google
archives prove you to be untruthful.

Precious little of what you have offered here has been valid. It has been
the trollings of someone who obviously has very little experience in or
tolerence for Amateur Radio. Why, we may never know. I certainly don't have
the inclination to travel to the Northeast and knock on your door to find out.

>decent enough radio.

To be truthful I prefered the original 757. The MkII was a replacement after the first was stolen. But the only real "problem" that I have with it is that the "mode" switch is a push button that steps through the modes. If you get a bit too hair triggered you have to go all the way around again.

Technology be danged...give me rotary switches ! !

>
>No, Sir. You are mistaken. I did not purposely remain anonymous. I only
>refused
>to give my callsign, which you found out.

You are LYING, Vipul.

You were specifically asked your callsign, name, etc as it pertains to
Amateur Radio and you refused time after time.

>The time has passed where you can keep bringing this up (which was never
>valid
>to begin with anyway).

If you don't like being disproven over and over in a public forum, Vipul,
stop being untruthful. Honesty does not have any "term limits". Sorry.

>There have been several posts since your "outing". Any you know they are from
>me, so not anonymous.

We know them NOW, Vipul...NOW is not in question. Your identity is known
due to a bit of armchair detective work on my part...NOT from any initiative on
YOUR part... ! ! ! ! !

>Then his partner, mjc5 said:
>>FACT: The internet is no more dangerous than driving to work in the
>>morning - much less in fact.
>
>How do U know?

Because of a lack of evidence to the contrary, Vippy. I can find any
number of "road rage" stories in the paper on almost any given day.

On the otherhand, misdeeds perpetrated as a result of Internet abuse are
far fewer. This is archived in the mass media.

>BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA! ! ! ! ! !

Too late, Vipul...We've already been laughing AT you for months.

No, that was a Challenger. 4-6-6-4 wheel arrangement as opposed to the Big
Boy's 4-8-8-4.
>
> I'm unfamiliar with that, but the local blurb says that the Cheyenne
>display is the last remaining Big Boy.

Various websites detail at least seven Big Boys in various museums. None are
operational, although a few look like they would not need a lot of work to get
running again. Passing all the required tests is another matter.
>
>> I
>> confuse the 3945 and the 8444 (now the 844). Or was that the

I think the Challenger is 3985.

One of the websites shows a museum with a Big Boy indoors (!) next to a tuscan
red GG-1.

Google will reveal all.

btw, nobody has answered the original trivia question (what is the
purpose/meaning of the letter "F" on electric locomotives and MU cars?). I can
tell that Phil knows the answer.

"WMA" on CW. Gotta luv it.

>you would be amazed at how many people don't know that 'me' is
>maine and 'ma' is massachusetts, let alone sort out the valleys in
>california!

The good 'phone ops say "west mass" (two syllables) and "maine" (one syllable)
2-3 times while the clueless are stumbling over "western massachusetts"

Anybody who is half serious about a domestic contest learns the ARRL sections
and their abbreviations beforehand. Heck, there's only 80 of 'em.

So do what interests you.

Here's a tip: Many Field Day groups need help during set-up and take-down. Volunteer to help with those things and leave the operating to others.

>>You're forgetting the most important point: The only way to KNOW what the
>>capabilities of a station are is to actually operate it.
>
>Yes, thats standard Ham radio hype.

No, it's a fact.

>You don't need Field Day to operate your radio.

You do need Field Day to operate it under conditions where lots of other stations are on the air under similar conditions.
>
>>I suspect you don't like those real-world conditions...
>
>Field day is not "real-world" conditions.

Sure it is. You have a limited set up time, power from non-mains sources, operation from locations other than home and vehicle. It's a test of imagination, versatility, skill, knowledge and endurance.

Let's see you make 3000 points in 1B-1, Vipul...

The Gateways and Dells would have the typical home user think that they
need a really fast computer when the things which most of us do on a
computer could be handled by a '486. My "fast" computer doesn't sit in
the shack but rather in the next room where it handles large scans,
digital photos and music files for recording or editing.

I bought after several of the gentle nudges which car salesmen are known
to use. At no time did the discussion center around things like the
eventual rust which would consume the car or the likihood of failure of
the aluminum engine at only 54,000 miles. Compared to automobiles, the
transceivers of any period have been super!
>

The fellows who fly solo from their home stations or as guest ops from a
big station end up being the best ops because they must learn to run as
well as search and pounce if they are going to have competitive scores.

> . . . so there . . !

Let's look at the possible flaws in the guy's statement:

Lots of harmonics and very hard keying (Ten-Tec is known for neither of
these). Could it be that the guy's MP is overloading and going
non-linear in the presence of strong signals from a nearby Omni VI?

"He hears less well than I do...". How do we know this? Is the guy who
owns the Omni VI a good op? Are his antennas in the same league?

You failed the test, Brian. Jim DID get the rig he wanted.

I don't think he is. I believe a lot of guys buy the latest because the
ads are glitzy and because "W4** bought one". If W4** bought one, it
has to be great.

> the noise level.

You may be correct on this one. My purchasing decisions run something like this:

Does the rig attempt to cram ten pounds of questionable matter in a five pound bag (160m-70cm)? What are the receiver specs? Is it something which will likely be repairable in seven or eight years? What is the manufacturers repair record in terms of cost and time? In a world where 90% of transceivers are made in Japan, can I obtain a comparable or better piece of gear made in the United States? Finally, can I afford it?

I've listened to many a QSO where a European using an FT-1000MP works an American using his FT-1000MP. He signs and works an Argentinian using his FT-1000MP. I like supporting the underdog. I like supporting American workers. There isn't a piece of Japanese gear at my operating position. I've already bought plenty of their home entertainment equipment since there is not much in the way of alternatives.

Adaptions? The random hams I hang out with all put their antennas up so
that they'll stay up in the wind.

>
>See if you can get your money back for the EE courses you took.

EE courses, is more directly useable than most fields. However, EE courses, like any other field does not show you the practical application. They don't teach you automechanics in EE. Amateur radio could give you a practical application of EE, but doesn't.

>> And heavy winds were there that weekend, even the whole night. The setup
>lasted
>> under those windy conditions.
>
>Yeah, most do.

Yes, but it takes knowledge and experience. I learned some of their tricks. Ham radio should have more events like that one.

I think Goose uses 'em because they are a "known", he and his crew are
familiar with them, he finds them reliable,he knows much about repairing
them and he has several parts units sitting around.

On FD, there's always a chance that I'll get caught with my pants down
but it won't be because of a broken rig. If Bert's '1000MP "Field and
Stream" breaks, I'll happily haul the Paragon out.

> only wish!

The stuff pleases me 'cuz I get out well but BIG 40m yagis and four
squares on 80m and even 160m are becoming more common. A friend of mine
in Indiana is agonizing over buying either a 2 element or a 3 element
40m yagi. The 3 element costs a lot more money. I've advised him to
grab the 2 element yagi because thusfar, he has been a vertical or
dipole user. The 2 element yagi at height is going to out perform
verticals and dipoles by a wide margin and most of hamdom is still using
verticals and dipoles.

I figure I'm good for another decade of climbing. What I don't do is digging. I hire the local grave digger (yes, this area has a fellow who still digs graves by hand). He does fine with rectangular holes but has trouble with simple trenches. The one I had him dig for burial of coaxial cable and control cables for the higher tower was crooked as a dog's hind leg. I did the other myself after loosening the dirt with a garden tiller.

That's the way W9ZRX's place was as far back as twenty plus years ago. The station design was incredible and the antennas were all homebrew.

The station was superb. The operators were, in Ville's view, poor. He noted constant CQing with little listening and said that he was standing

by and copying callsigns when the operator was doing the QRZ? number.
Of course Ville has probably been number one in the world in CQ WW CW
than anyone else.

That's typical of the low power/small antenna guy. Starting a run and
holding a frequency are extremely tough under those circumstances.

Are you saying that the winds are never strong during Field Day, Vipul?
What is the purpose of FD? Your "chance correlation" stuff is just so
much blowing of smoke.

> >I've had to put up with a lot of wind from the likes of you and some

It is obvious that they were simulating "real world" conditions. During
a real emergency, folks may not have the option of showering for days.
You might have to live with human smells mingled with chili, garlic or
curry.

Probably the same kind of person who would enjoy watching you at bowling
or the same kind of person who would enjoy watching you as you are
fishing. Maybe it'd be the same person who would enjoy watching you
paint an entire portrait or the one who would find watching you mount
stamps in an album to be exciting.

> >I could call you a ham before I could call you a EE.

My friends who are working EE's didn't have any problem translating
their classroom knowledge into work in a real job. Besides, what you
didn't learn in the classroom about fluorescent lamps isn't practical
knowledge. You asked how they'd work on 12 VDC. This isn't rocket
science. It is a simple matter of your not understanding the theory.

>They don't teach you automechanics in EE.

No kidding? They don't teach astronomy in art class either.

> Amateur radio could give you a practical

> You were specifically asked your callsign, name, etc as it pertains to
>Amateur Radio and you refused time after time.

How is that relavant to the point?

>Honesty does not have any "term limits". Sorry.

I was honest. I didn't VOLUNTEER my callsign or name. How is that not honest? I didn't have to tell you that. Not volunteering one's name or callsign is not dis-honest or hiding. Hint: if someone does not tell you their name, it does not mean they are dis-honest.

Now that you know my name and callsign, its not anonymous. That time has passed. So, that no longer applies.

> You are pretty poor at after-the-fact storytelling, Vipul. You were
>hiding behind your screen name long before I joined the fray.

Yes, I am pretty poor at after-the-fact storytelling. Not one of my talents. Any story of the events I have attended were from actually going there and telling what people said. I give one part at a time, otherwise it would be a very long account of events. Nothing is added on to "improve" the story. Just the true story.

Never had any intention of hiding. How does the obvious qualify as "hiding"? Also, I did not deny it when you found it out. Hiding and not volunteering is two different things.

>>>FACT: The internet is no more dangerous than driving to work in the
>>>morning - much less in fact.
>>
>>How do U know?

Yes, but it does happen. Children getting kidnapped after meeting someone throught the internet, for example.

>Too late, Vipul...We've already been laughing AT you for months.

Non-Hams laugh AT the behaviour of Hams. Mostly show dis-interest, rather than laugh, actually.

Okay. Before finding about Ham radio, I experimented with amateur radio
circuits, including kits. Then, I learned about Ham radio from a co-worker.
Then I got an amateur radio license.

Their idea was that the network would be via radio on the amateur bands, so it
would be an amateur radio contest. I can repost their idea, if you like. I
recall all sorts of put-downs of any sort of radiosport, using such phrases as
"electronic paintball wars" and griping about how their idea was held back by
"dinosaur-dung-encrusted regulations".

Nice guys with great leadership skills, huh?

I remember explaining that it would be like running the Boston Marathon on a
treadmill hooked to a VCR that would show video of the course. They claimed

their emulations would be very realistic and they could not understand why
anyone would insist on the "real thing".

>happens to be.

That's another Great Equalizer. The effect is most pronounced on CW/Morse, of course. In that mode, skill or its lack are very apparent and the equipment used is not apparent at all. On the air with CW/Morse, no one can tell whether I am using an IC-7800 or a rebuilt Southgate Type 1. I suspect that is one big reason some folks dislike the mode so much.

Well, a 300 MHz Pentium 2 or equivalent, if ya wanna run later Windoze versions and newer apps.

Plus the dern things are getting so inexpensive that us dumpster divers are finding gold mines everywhere.

I have a 486DX4 100 MHz in prime working shape, btw. VLB video card, Win 95B and everything. Cost me maybe $100 to build a couple years back. Dinosaur.

>My "fast" computer doesn't sit in

Same here.

To prove yer point, I recently "upgraded" from Quicken 98 to Quicken 2003 Deluxe. Couldn't get 2003 to network, plus it had lotta features I didn't need. Uninstalled it and put Q98 back to work. Anybody want 2003?

Agreed!

I'm thinking of an external grid-driven single 811 amp to put the K2 in the 100 watt class plus light up the shack. Or maybe a pair of 807s. Just until the Southgate Type 8 is done. The guy on the other end can't tell.....

Those are onlookers, not participants. They might enjoy seeing the technology, marvel at the use of morse code, like an occasional burned hot dog and be on their way in an hour.

I spent ten years of my life in Africa. After you've been in an African disco when the temperature exceeds 100 degrees F and the person standing next to you exudes the odor of a bag or rotten onions, human smells don't offend you as easily as they might have in the past.

Fibbing about whether you attempted to keep your identity anonymous in
the here and now is certainly not being honest.

> Hint: if someone does not tell you their name, it does
> not mean they are dis-honest.

No, telling people that you never attempted to keep your name anonymous
is dishonest.

> Now that you know my name and callsign, its not anonymous. That time has

They had it backward. Why would anyone want to do a virtual contest
when they could do the real thing?

> PLC (power line communications) may make it all a moot point.

That's one of the most serious problems that radio could face. I don't
see how anyone at the Commission could fail to see the interference
potential and even likelihood.

> Tell it to the PROFESSIONALS IN RADIO

A lot of the PROFESSIONALS spend their time in
point-to-very-specific-point work. Most hams do not. I can remember one
instance in which we worked into an African relay which suddenly went
down hard and permanently. We were faced with working long haul HF back
into the U.S.--a four thousand mile hop during periods of frequent solar
flares. Two of us attempted to explain to the ambassador that
communications outages could be frequent and prolonged. He was silent
for a moment and said, "That'll be okay. If we have anything urgent to
go, we'll just send it NIACT (night action precedent). The two of us
doing the explaining stared at each other with opend mouths and decided
to start over with the explanation.

It is easy to put out a clean and stable signal from an HT-46, an HT-32B
or a T-4X but CW gear is much easier to homebrew. It'd be harder to
disguise a Swan 500-C "Drift-o-matic".

I haven't found much that I want to use which won't run on my 200 MHz
Pentium with Win 98 SE.

> Plus the dern things are getting so inexpensive that us dumpster divers are
> finding gold mines everywhere.

I see 300-600 meg machines for sale in the local classified ads for
$150-$250 all the time. A number of companies give them away when they
upgrade.

> I have a 486DX4 100 MHz in prime working shape, btw. VLB video card, Win 95B
> and everything. Cost me maybe $100 to build a couple years back. Dinosaur.

But useable for the forseeable future.

...or you could do a pair of cheap, grid-driven 4CX250B's for less light
and more snot. WA5FIR once built a pair in a Drake speaker cabinet just
to show how small a KW amp could be.

> Just until the
> Southgate Type 8 is done. The guy on the other end can't tell.....

All right. You've kept alluding to the Southgate series. What's been
the evolution?

Reminds me of the Latvian-American captain of OSU's volleyball team (full scholarship) who graduated with a EE degree. We were both in sales for an industrial electronics distributor. His classic line to me was, "I kept hearing terms like IF and RF and never figured out what they meant". That probably explains why he was in sales and not working in design.

Did the guy quit IDing incorrectly? He may have been told informally
that there was a problem,
and he since IDed more properly.... If he insisted on doing it wrong,
then they could bring
in the funny cookie corporation.

Do a google search and find out. I googled your handle in this group,
and under one thread, (Immoral Truths) there is all the evidence you
might like.

A very smart gentleman once told me that regardless of what you may or
may not know to be true, if everyone else but you holds a different
opinion, your own opinion becomes moot. The best you can do is observe
why they have a different opinion, and learn from that.

If you are right, and we all are wrong, even then you have had a
communications failure.

Same thing on the 745. And yes, I tend to push the button once too
often and have to cycle through again.

And HOW! If Vipul would like some instant acceptance, all he would have
to do is help put up and tear down the Field day stations at his local
club. Our club has a pretty involved operation, and we can always use
some more help. That might help me not use up so many calories over the
weekend.

> No, it's a fact.

HAR! I missed that comment of his, Jim. The entire idea of putting up a
station, something which Vipul professes to like doing, is so that it
can get a good signal on the air. I would submit that a beautiful setup
can be made that will radiate virtually nothing. So how does Vipul

suggest that we test out his station setups?

Correct.

>No, telling people that you never attempted to keep your name anonymous
>is dishonest.

I did not attempted to keep my name anonymous. I just didn't volunteer my name.

>But you would have us believe that you were totally forthcoming.

Yes, my views on Ham radio, as I expressed them, have not changed after you found out my name.

>Your stories only come in bits and pieces. Those bits and pieces only
>seem to confirm your latest preconceptions.

Yes, I know about those "bits and pieces". I just decide which ones to include first, and which ones later. It makes it more interesting that way.

They dont always seem to confirm my latest preconceptions. Once in a while some of the "bits and pieces" are positive for Ham radio, and I give credit for that. One example is when I added that some homebrewing occured at a CT hamfest, something untypical.

>We're not children here.

How do I know that? Children are allowed to get an amateur radio license.

>You have confirmed your adult status.

Thats true. At least you believe some of the things I say.

>Which is it? You've reversed yourself.

I'll reverse myself again. Not enough people know about Hams to laugh at them. I was trying to use the word AT. It was not correct. Most non-Hams do not laugh at Hams. The more correct statement is that most (this includes spouses of Hams) are dis-interested in Ham radio.

Yes, good point. Ham radio clubs should do this more. If I were to have a club, I would get more people using the equipment.

From k8mn:
>> >There are only two times when I run: 1) when someone is chasing me and
>> >2) when I am chasing someone.
>> >

From n2ey:

How far will a Ham chase me?

>"I kept hearing terms like IF and RF and never figured out what
>they meant". That probably explains why he was in sales and not working
>in design.

It could also be that schools do not always have practical projects. Also, many schools do not have any rf courses in their curriculum.

Sometimes I have figured things like that out in they worked. But, its not always easy to do. Figuring it out may not always work.

The steps may be easy enough to follow AFTER you know how to do it. It better if you had the specialty automechanics electronics training.

>

They never gave anyhting really specific. Basically it sounded like a form of
frame relay or TCP/IP adapted to amateur radio. Toss yer packets into the mix
and the network will get 'em where they are supposed to go, that sort of thing.

>
>> I recall all sorts of put-downs of any sort of radiosport, using such

>
>They had it backward. Why would anyone want to do a virtual contest

>when they could do the real thing?

The idea was that with their system the bands would never be crowded with contesters. Nobody would need big antennas or high power, just a little setup that could access the network. Nobody who wasn't in the contest would have to deal with contest QRM. In theory, anyway.
>
>> PLC (power line communications) may make it all a moot point.
>
>That's one of the most serious problems that radio could face. I don't

>potential and even likelihood.

Doesn't matter - if they think getting everyone a highspeed net connection is more important, or is going to spur the economy, they'll push it. Heck, in Germany there's a proposal to rewrite the rules so that only safety-of-life radio services are protecte from Part 15-type interference.

We all have to fight this thing because it goes way beyond raising the noise floor on 60 meters. The acceptable noise limits of incidental radiators are already too high.

>
>All right. You've kept alluding to the Southgate series. What's been
>the evolution?

Very, very long story. Only hombrew and certain suplus lashups got Southagte
designations. Full of sideroads and A/B/C models. Here's a start:

The Southgate Type 1 was my first SWL/Novice station Circa 1967. Built from
pieces of old TVs and the remains of an NRI radio-correspondence course that I
got at a fleamarket.auction for fifty cents. Rx was a 6SN7/6K6 regen, tx a 6V6
xtal osc on 3726 and later 7175 (back when the Novice bands were different).
Actually learned the code and made contacts with it. Antenna was a wire out to
the crab apple tree. Ground was the radiator pipe. Ten watts in, five watts out
on a good day.

Replaced by a Heath AR-2/QF-1 and DX-20 combo. Eventually added a Gonset Super
6 converter ahead of the AR-2 for better performance and a VF-1 to the DX-20
when I got the Advanced in '68. Then an SX-99 and a Viking Adventurer. All gone
now except the J-37 key and some bits and pieces from the Type 1. I don;t want

to think what some of that stuff would be worth now.

Not bad for a 13 year old with no help from the parental units, huh?

> How is that relavant to the point?

How can we put any credibility into your posts when you are
so-often proven untrustworthy, Vipul?

Lennie the Liar is probably a very intelligent person, but he too
is so-often proven to be a liar that nothing he says, even that which
IS truthful or factual is respected.

> >Honesty does not have any "term limits". Sorry.
>
> I was honest. I didn't VOLUNTEER my callsign or name. How is that not honest?

The part that is NOT honest is that you keep repeating that all
you refused to give was your callsign. That is not true. You were
asked your name. You refused. You we asked your experience/education
to validate some of your posts...you refused. We asked you your age
and profession...You refused.

The part you are being dishonest about is stating that you DID
give your name and other information. You did NOT do any of that
until I proved who you were.

> I didn't have to tell you that. Not volunteering one's name or callsign is not
> dis-honest or hiding. Hint: if someone does not tell you their name, it does
> not mean they are dis-honest.

I have already made my point.

> Now that you know my name and callsign, its not anonymous. That time has
> passed. So, that no longer applies.

You keep repeating that you DID give your name, etc. That is not
true. As long as you keep asserting that you did not decieve or
mislead, the subject is relevent.

> > You are pretty poor at after-the-fact storytelling, Vipul. You were
> >hiding behind your screen name long before I joined the fray.
>
> Yes, I am pretty poor at after-the-fact storytelling. Not one of my talents.

> telling what people said. I give one part at a time, otherwise it would be a
> very long account of events. Nothing is added on to "improve" the story. Just
> the true story.

You missed the point again. You keep trying to re-write what you
already said. It can't be done in this forum. You are seemingly
oblivious to the fact that "Google" exactly archives everything posted
to USENET. Your numerous attempts to re-write things you said are
archived.

> Never had any intention of hiding. How does the obvious qualify as "hiding"?
> Also, I did not deny it when you found it out. Hiding and not volunteering is
> two different things.

It is when you try to decieve people about who you are, what you
are, etc.

> >>>FACT: The internet is no more dangerous than driving to work in the
> >>>morning - much less in fact.
> >>
> >>How do U know?
> >
> > Because of a lack of evidence to the contrary, Vippy. I can find any
> >number of "road rage" stories in the paper on almost any given day.
>
> Yes, but it does happen. Children getting kidnapped after meeting someone
> throught the internet, for example.

I didn't say it DIDN'T happen, Vipul. I (and others) said it is
LESS DANGEROUS than driving. This is a fact. Also, many of the
"bad" things that happen that also involve the Internet involve mutual
participation. One prominent local case involved a 30+ year old man
who seduced a local teenager, met her here locally and spent the
weekend with her in a local motel. Illegal, yes...but she was at
liberty to walk out the door at any moment. He could have just as
easily "met" her at the local hamburger joint or movie theater.

> >Too late, Vipul...We've already been laughing AT you for months.
>
> Non-Hams laugh AT the behaviour of Hams. Mostly show dis-interest, rather than
> laugh, actually.

The difference here, of course, is that WE (many of the
participant in RRAP) are Hams laughing at another Ham (you). It has
nothing to do with non-Amateurs.

1966. Unmanned station / telemetry question...

Newsgroup: rec.radio.amateur.policy
Date: 2003-05-31 20:48:16 UTC
From: achilles03@hotmail.com
Message-ID: <fef44ceb.0305311248.73c899e7@posting.google.com>
Source record: 68116

I'm currently studying to get a tech's license in AR for a project I'm working on involving an airborne balloon transmitting morse code. From what I've read, only repeaters are allowed as unmanned stations.

My question is, what about location-oriented telemetry? I'm sure they don't fall under the 'telecommand' type of transmission, as aren't coming from a controller to a controlled device. Instead, it's an uncontrolled device transmitting to a(ny) listener. Do you have to get a permit or waiver to do this type of radio telemetry?

Thanks in advance for any insight anyone has to offer.

Dave

>probably ruin your whole day. :-)

The same could happen from something you say on the air. Does this mean that you don't identify yourself (i.e.,use your callsign) and thus, operate illegally? (Or is it that you don't have a call?)

The key to avoiding the situation you outline is to state your opinion in a thoughtful and respectful manner, never condemning those who might disagree. Signing your name and call adds a touch of validity to your comments; without them, few will take you serious.

I've been posting here since 1992 and have never had anyone show up on my doorstep, even during the heated code/no-code wars!

Nope. As long as your telemetry ID's once every ten minutes as required
by Part 97 (the FCC's rules and regulations for Amateur Radio), you are "OK".

There ARE "band plans", or mutually agreed upon conventions, that "divide"
many of the bands into certain types of activities. Obviously you don't want
your telemetry in the middle of a busy repeater input or output, both to ensure
you get uncorrupted data, but also to avoid interfering with other users of the
spectrum.

Don't despair, there is more than enough spectrum for all users!

What a nice guy! So right at the moment you would be needed the most,
you don't help because you aren't "learning" anything.

I'll bet that you might change your mind about hams if you would lose
the attitude of *only* doing things that you consider beneficial to
yourself.

Yep, 20 meters and 40 meters, not much sideband today. Too much solar activity. But on the lower bands, CW activity was chaotic. It was a good time to get a refresh of the mode. Like the old saying goes, CW gets through when nothing else will!

End of story.

Not too much but there are places where fun is where you find it. If
you're in a country with no TV, a night of listening to eighteen guys in
identical tie-dyed pajamas singing a 25 minute song in unison can be
entertaining.

"It isn't the heat or the humidity. It is the throbbing of the drums
which is slowly driving me mad".

> I did not attempted to keep my name anonymous. I just didn't volunteer my name.

Look, Vipul. If people ask your name or your call sign and you decline
to give it, you are attempting to keep them anonymous. Your statement
above is simply false.

> >But you would have us believe that you were totally forthcoming.
>
> Yes, my views on Ham radio, as I expressed them, have not changed after you
> found out my name.

Not your ideas, Vipul--we're discussing the fact that you did not
provide your name or call when asked several times.

> >Your stories only come in bits and pieces. Those bits and pieces only
> >seem to confirm your latest preconceptions.
>
> Yes, I know about those "bits and pieces". I just decide which ones to include

...only to you.

> They dont always seem to confirm my latest preconceptions. Once in a while some
> of the "bits and pieces" are positive for Ham radio, and I give credit for
> that. One example is when I added that some homebrewing occured at a CT
> hamfest, something untypical.

That is atypical. Most homebrewing does not take place at a hamfest.

> >We're not children here.
>
> How do I know that? Children are allowed to get an amateur radio license.

How many children do you know who have been in amateur radio for forty
years and who are retired?

> >You have confirmed your adult status.
>
> Thats true. At least you believe some of the things I say.

I didn't say that I find it easy to believe.

> >Which is it? You've reversed yourself.
>
> I'll reverse myself again. Not enough people know about Hams to laugh at them.
> I was trying to use the word AT. It was not correct. Most non-Hams do not laugh
> at Hams. The more correct statement is that most (this includes spouses of
> Hams) are dis-interested in Ham radio.

My computer has all sorts of ways to delete things which I do not mean
to say. I can use the "delete" key. I can highlight and cut. If you
write something which you don't mean, why keep it at all? Why not just
get rid of it before sending to the newsgroup. That might give some
clarity to your comments. Clarity won't necessarily prompt anyone to
agree with your sweeping generalizations.

>> Ask Jim about his beloved diesel Rabbit.
>
>Well, Jim? I always enjoy a good automotive tale.

Back in late '79, after enduring the gas shortages and the make-do pollution controls of that era, I ordered a new diesel Rabbit. Made in Westmoreland, PA, although the engine came from Germany. They were so popular that you had to wait 6-8 weeks while they built 'em.

Most of the driving I did back then was the very worst kind for any car - short trips, stop-and-go driving, bouncing over bad city streets. Car took it all and kept on humming. In '87 it was rear ended on Mac Dade Boulevard and the insurance company declared it totalled even though it was fixable. I took the insurance money and found a small shop in Yeadon that would fix it for a very good price.

In '89 I got a good deal on a used one with a remanufactured engine and trans. The original was well over 100,000 miles by then, so in the spring of 1990 my dad and I did an engine/transmission swap. Actually it was more of a "make one good car out of two mediocre ones". End result was rather odd looking because the interior parts were not all the same color. But it ran really well and I had a pile of spares to keep it going.

I tried to keep after the rust but with the steel they used and the road salt it was a losing game unless I learned to weld in new body panels. By 1997 it was getting to the point where I knew it would fail inspection at some point. So I traded it in on a Saturn. Still ran and drove great after 17 years, but it prolly went straight from the Saturn dealer to the crusher because there's not much call for those cars.

No ignition noise, no computer, easy to take care of. Change the oil, change the filters, get the timing checked once a year when you get it inspected, have 'em change the timing belt every 5 years or so while they're at it. Met all the pollution specs and got 40+ mpg in the city. On long road trips it would get well over 50 mpg. Although not a big car, it was comfy for me, and I'm 6' 3" .

For Field Day, I would remove all of the seats except the driver's seat, load all the gear inside and put the mast on the roof. Weighed everyhting beforehand to avoid exceeding the 837 pound limit. Never a problem.

Well, you asked for a story...

Not at all. I use it sometimes. Most of the time I turn it off, though. My main point is that from the beginning of the transceiver era until recently most low and middle end rigs did not let you turn the AGC off.

We're talking about complete setup, not just antennas. Grounding, power, weather protection, etc.

>I will do the setups, but not the take downs.

Look up the term "prima donna".

>(Don't learn as much from that).

Sure you do. Here are some things you learn from taking down a Field Day setup:

- How to safely lower antennas and disconnect equipment
- How to roll up antennas, coax, and wire so that they are not damaged. (no, you do NOT hank up coax as if it were a clothesline!)
- How to pack things away properly
- How to do it better next year
- How to clean up messes as well as making them
- How to be of service to others
- How to get things done even though you're tired.

Of course, you may think yourself above doing things like folding up tarps and rolling up coax. Such an attitude doesn't endear you to others.

No, that would be more useful for traditional Ham radio clubs.

>Or it could mean that the man was at Ohio State to play volleyball and
>that his EE degree was a gift.

In that case, he made more productive use of his time and learned more useful skills.

Ohio State has rf courses, by the way. One of the few colleges that offer rf courses.

Not everyone is set up for PSK31 or they feel typing on the keyboard makes it no different from the internet.

However, so far PSK31 has yet to prove that it will gain and keep a significant number of adherents. It may or may not be a "flash in the pan". Look at how little packet there is today compared to its heyday. The same holds true for other modes. Each was popular at one time but now has only a very modest usage. It's rather like they were the "flavor of the month". PSK31 could go the same way. On the other hand, CW is still the most popular and heavily used of all the digital modes (yes it is digital even though not requiring a computer). Check out the various surveys on ARRL to get a feel for how much each of the various modes is used.

I don't know about K-Tel University, but I've looked at several colleges. Even the few that have rf lab facilities available have few rf courses available each semester. Most colleges do not have rf courses at all.

I chose to leave EE at the end of April. I had a choice to continue in EE, or do something that is more stable and pays more. My parents advised me that the other field would be better. Even though I spent years in school for EE, I will do that other field instead.

> And now you need to learn ABOUT Amateur Radio.

Originally I planned to learn a lot about amateur radio. Now that I am not an EE, I do not plan that. Now my plan has been reduced to being a utility Ham. Perhaps learning about ARPS, how to order pizza over amateur radio, using repeater directories, and other amateur radio communications. I don't see any other point for an ex-EE.

Yes, those are good examples. Contesting is about as much fun as those events.

>...and you still haven't understood, despite numerous corrections of
>your mistake, that "amateur radio" and "ham radio" are one and the same.

Are you having an "identity crisis"?

>> Now I am no longer an EE.
>
>We have no evidence that you ever were a EE.

Okay, so I must have planned that so that one day I could say I am no longer an
EE. Good plan.

>>They don't teach you automechanics in EE.
>
>No kidding? They don't teach astronomy in art class either.

Yes, but they require literature courses or other liberal arts courses and that
has nothing to do with EE (or reality).

>> Amateur radio could give you a practical
>> application of EE, but doesn't.
>
>Then you aren't paying attention.

Yes, I am paying attention. Ham radio is an operator-focused hobby, allowing
for antennas.

>
> Lots of harmonics

He's a multi-multi, has other kW rigs operating in the same room on
harmonically-related bands. Has outboard bandpass filters between all
xcvr T/R relays and the rcvr inputs. Plus there's another upstream
bank of bandpass filters on the lines between the outputs of the amps
and the antennas. If the guy, who is a bit over a mile away from the
Omni is hearing the Omni's harmonics they're there. Loudly it seems.
That area is contest kilowatt alley, harmonics draw a lotta
"displeasure" in that neighborhood.

> and very hard keying (Ten-Tec is known for neither of
> these). Could it be that the guy's MP is overloading and going
> non-linear in the presence of strong signals from a nearby Omni VI?

He's smart enough to sort that out.

> "He hears less well than I do...". How do we know this? Is the guy who
> owns the Omni VI a good op? Are his antennas in the same league?

On 160 & 80 yes. 40 & up no.

> > Doan matter, he could never bring hisself to use the AGC on cw.
No

> at all the additional loot you'll save!

There exists the possibility that I might move in with one of 'em in
my old age and pay her NOTHIN'. Would save me a bucket of money. The
one who owns my 3/4 acre FD site. Backs on a wooded golf club which
screams for the addition of beverages amongst the trees. Known as an
area having very good ground condx. Already has the concrete pad for a
Rohn 25 tower which was installed by a former property owner/ham. That
would work.

Correct. But, I did not hide it either.
> Nor did you provide your callsign when directly asked.
Correct.
> Nor did you provide your technical background when directly asked.
I may have said I was an EE. I didn't claim to work in the rf specialty.
> Nor did you provide your experience in Amateur Radio when directly
>asked.
One can conclude that I was new to amateur radio in that I went to my first Field Day. This was before I was asked about it. So, I did provide that info BEFORE asked about it.

I did not remember saying if I had an amateur radio license.

>It is when you try to decieve people about who you are, what you
>are, etc.
I do not try to deceive people. Not providing info is not deceiving. Your belief is not my responsibility if it is not relevant to amateur radio. For example, I could really be "Mike Coslo", not "Vipul Shah".

>It's about your
>credibility over your repeated acts of untruthfulness and misdirection.

On <very> many occasions, you responded to something other than what I was saying. I cannot believe how many times you did that. I don't believe all those times could be because you didn't understand what I was saying.

This may have been your attempt at misdirection. This may have been motivated by misunderstanding what I was saying (which I cannot believe you misunderstood so many times), <your> untruthfulness, or your dislike of my views so you give an insult.

At least Jim, N2EY, is courteous. Sometimes, even when I don't deserve it.

> Now you are not telling the truth about how you refused all that
>information and how, since we now "know" who you are that your previous
>obfuscation is now "OK".

Please note that it was not my intention to post anonymously. I noticed some of the clubs, Hamfests, and Field Day did not provide the experience I was looking for in both the technical and social aspects. I had an interest in the amateur radio hobby and wanted to change the hobby for the better.

Packet on HF proved to be not as reliable as other digimodes.

Packet on VHF/UHF proved to be used for downloading software, which is
better taken care of using an internet connection, so it will become
extinct. Over here in the Netherlands, packet on 2 meters/70cm is mainly
used for APRS and AX-25 mail.

PSK proved - along with modes like MFSK-16 - to be reliable for its intended
use: that is, making 100% contacts using minimal bandwith (PSK31) or
difficult conditions (MFSK-16).

One cannot compare modes to another... in the end, only phone will
survive...

You really need to study the history of amateur radio a lot more thoroughly.
Many of the major technical advances were made by people WITHOUT any degrees
or any college training. They simply pursued their technical investigations
on their own in the directions that their interest took them. Just because
you chose to not continue studying EE, does not mean than you cannot be
technical. The two have no need to be tied together. If you choose to
limit yourself to being what you call a "utility ham," then it is exactly

that, your choice, and don't gripe and groan about not having opportunities to explore the technical aspects of ham radio.

I doubt that only phone will survive. There is evidence that CW usage continues to increase. Participation in CW contests, for example, has increased 20% in the last year alone (see articles on the ARRL site).

A number of people that I know who have taken the plunge and upgraded by passing the morse code requirement have been bitten by the bug and operate almost exclusively CW.

Up until this current flair wreaked havoc with everything, the CW portions of 15, 20, and 40 had a lot of activity.

YOU didn't get the memo: PSK31 is for digi-twits and internuts. Real
hams pound out that straight key CW until their fists BLEED. All others
are wusses. Real hams also blow their own glass for their vacuum tubes.

Who thinks that? Just because it's done on the computer doesn't mean
it's "the internet". Its as valid a form as RTTY, or any other Non-CW mode.

> However, so far PSK31 has yet to prove that it will gain and keep a
> significant number of adherents. It may or may not be a "flash in the pan".

Well, the frequencies seem to be getting more crowded as time goes on.

> Look at how little packet there is today compared to its heyday. The same
> holds true for other modes. Each was popular at one time but now has only a
> very modest usage. It's rather like they were the "flavor of the month".

Packet has a number of reasons for going out of favor. Speed is
probably the biggest. We can do what packet does via the internet much
more efficiently.

Perhaps PSK31 will fall out of favor. It doesn't seem to be heading
that way though.

And I hope I don't sound too snobbish, but there seems to be a better -
or at least more polite class on PSK31 than other modes. That includes
CW, although CW is fairly close.

> PSK31 could go the same way. On the other hand, CW is still the most
> popular and heavily used of all the digital modes (yes it is digital even
> though not requiring a computer). Check out the various surveys on ARRL to
> get a feel for how much each of the various modes is used.

You are correct that there are more CW users than PSK31 users. So if a ham were called upon to participate in an emergency net using PSK31, the messages would almost certainly get through in a similar fashion to CW Morse.

>I did not remember saying if I had an amateur radio license.

That was not the point.

And yes, you did. Then you refused to answer any questions about it.

>I do not try to deceive people.

Well, you're doing a good job for not trying.

>Not providing info is not deceiving. Your
>belief is not my responsibility if it is not relevant to amateur radio. For
>example, I could really be "Mike Coslo", not "Vipul Shah".

It is when you attempt to "bull" someone into thinking you are something
you are not.

And you could not be Mike Coslo. Mike's posts are direct, clear and
easily understood. Yours are not.

>>It's about your
>>credibility over your repeated acts of untruthfulness and misdirection.
>
>On <very> many occasions, you responded to something other than what I was
>saying. I cannot believe how many times you did that. I don't believe all
>those times could be because you didn't understand what I was saying.

The "lack of understanding" is directly due to your inability to
effectively express yourself....Or at least express yourself without insulting
or demeaning people.

>This may have been your attempt at misdirection. This may have been motivated
>by misunderstanding what I was saying (which I cannot believe you
>misunderstood
>so many times), <your> untruthfulness, or your dislike of my views so you
>give
>an insult.

I think you need to see how many people are directing such allegations at
who, Vippy.

>At least Jim, N2EY, is courteous. Sometimes, even when I don't deserve it.

Jim tolerates insults and idiots better than I do. I will be open minded
and polite up until about the third or fourth insult, then after that, it's
gloves off.

I gave you a bit more than three or four.

>Please note that it was not my intention to post anonymously.

"not my intention to post anonymously"..?!?!

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! ! ! !

I don't get it. What is "K-Tel"?

>>I had a choice to continue in EE, or
>>do something that is more stable and pays more.
>
> It pays more if you're good at it. Obviously you weren't.

You are wrong about better EEs being paid more. I was paid fairly high as a Test Engineer. The economy is very bad right now and even some that had 5 yrs experience in design had to drop out and take a retail job. Once your are out of the EE field in this country, rarely can you come back, regardless of how good you are.

This new opportunity, although less glamorous, pays alot more than a typical EE job.

> Why? I am not an EE and I undoubtedly know more about electronics than
>you ever hoped to.

I sincerely doubt that. I worked in the EE field. Also, I was working on taking grad courses before I decided to leave the EE field.

>And will undoubtedly know more than you will EVER know
>about Amatuer Radio.

Thats possible.

>When were you ever anything BUT a "utility ham", Vippy?

True, but when was the typical Ham not a utility Ham?

>

I did not say it was not valid nor did I say that it means it is the internet. What I am saying is that some don't find it interesting because of the aspect of typing on the keyboard. It simply doesn't feel like radio to that particular individual. Such people feel the same about the other non-CW digital modes. I tried RTTY and packet and found them uninteresting because of that. I'm not saying this is good or bad. Just saying that there are many reasons why CW will continue to live and be the digital mode of choice for a significant portions of hams.

Basically the point I am trying to make is that those who tout the favored digital mode of the moment are overstating their case. Yes PSK31 is no doubt a good mode but it's not for everyone. Each mode has advantages and disadvantages both in technical aspects and user aspects. To say that any

mode is "better" or is the "best" simply means that the person making this statement is only looking at it under the circumstances that favor that mode. Change the circumstances and another mode becomes the "better" or "best" mode.

>
> 73 de Jim, N2EY

This is an interesting question.

It seems that many Advanced class operators really do not care to upgrade. It could be that they have no need for the additional privileges granted to the Extra class, or, as proposed when the rules changed in 2000, many Advanced feel that this is the one class of license that "proves" they have passed a CW test that was much faster than the now required 5 WPM.

Personally, I was an Advanced for 31 years and never had the desire to upgrade as everything I was doing or wanted to do in ham radio was covered with the privileges conferred by the Advanced class license. I really don't know what motivated to decide to go to a testing session at Murray State University and take the Extra, but I walked in cold and missed one question. (39 years as a ham counted for some technical and practical learning experience I guess)

>I don't get it. What is "K-Tel"?

I figured as much...

"K-Tel" is one of those mass-marketing agencies that sell all sorts of "merchandise" such as the "Veg-A-Matic", "Sewing Magic", "Buttoneer", etc etc etc. on late night infomercials or those long-winded, 120dB commercials during the late-late movie.

It is an American idiom that if you got it from "K-Tel" it was cheap and of poor quality. "K-Tel" was famous for the "$19.95 specials" on 3 AM Infomercials. ("But wait...that's not all...!")

>>>I had a choice to continue in EE, or

Whooopie dooo! Welcome to the market driven economy, Vipul!

And I am not wrong about "good EE's" getting paid more.

>Once your are out
>of the EE field in this country, rarely can you come back, regardless of how
>good you are.

More lame assertions, Vipul. I know quite a few EE's who are in and out of the business for those same market driven reasons, and only those who CHOOSE to not go back to the field were ever "out" permanently.

Ask your RantBuddy, Lennie the Lame Anderson. He's published his "CV" in this forum before, and it's peppered with various jobs held (however teniously) for periods of a few months to a few years. His present retirement is due more to smart investing than it ever was due to his skills as a technician.

>This new opportunity, although less glamorous, pays alot more than a typical
>EE
>job.

And this opportunity would be.....? ? ? (Waiting to see how long it takes Vippy to answer THIS question...)

>> Why? I am not an EE and I undoubtedly know more about electronics than
>>you ever hoped to.
>
>I sincerely doubt that. I worked in the EE field.

Whooopie dee. I spent 20 years doing Avionics, both as a line technician, an IMD level technician, and Advanced Avionics Systems instructor. I also did DECM and AECM maintenence in addition to instructing both repair technicians and USMC pilots in electronic counter measures techniques and applications. I was fully qualified on the F4B, F4N, F4J, OV-10A, OV-10D, UH-1N, AH1-J, CH53A, D and E.

And you were an EE for...A month?

>Also, I was working on taking
>grad courses before I decided to leave the EE field.

You were "working on taking grad courses?"...ROTFLMAO!

I don't really disagree with what you say, Dee. But you chose to reply after the second post. (the PSK31 retort) That shows you probably didn't have a problem with the first one.

Even that I don't have a problem with. Whatever your favorite mode, go for it.

But with PSK31 being my favorite mode, perfectly suited for me, I felt compelled to reply. It IS a really good mode. Like it or not, it is comparable in "getting through" with CW. And I'll bet you a cup of coffee it will be around for a good while.

I know a few who don't upgrade because they do indeed want to prove
they passed a higher speed Morse code test. Seems a bit strange to me,
but whatever.

Oh I don't have a problem believing that PSK31 is comparable in getting through. Nor do I doubt that it will be around awhile. Afterall there is still noticeable activity in the granddaddy of computer digital modes (RTTY). I just happen to think that, as with other computer digital modes, it is unlikely to achieve and maintain the popularity level of CW. That doesn't make one superior to the other, just different.

And I think it is important to at least be aware of the various possibilities even if an area doesn't happen to pique one's curiosity a great deal. For example, although I am not interested in PSK31 for myself, I spent half an hour one day with our local PSK31 guru learning about it's capabilities, advantages and disadvantages just so that I could have that basic awareness of this aspect of the hobby.

I can assure you that I do have something. And it does pay more. Alot more.

I won't tell what it is until (at most) about six months. Perhaps sooner,
depending on certain things.

This could be some kind of bet. Would you like to make a bet?

Oh good grief! Good luck in whatever you are doing. Just for that, I
won't tell you what color my eyes are!

You play a strange game Vipul. I doubt anyone here really cares all
that much about you or your job or your license or whatever. Only in
your strange little game of "I've got a secret". And that is only
because it is so downright odd to act that way.

> Well, you asked for a story...

Now THAT is quite a tale. Jim W9VNE used to drive around in a Rabbit
which had the passenger seat removed. In its place was a homemade
plywood console with a transceiver and keyer. He ran up and down I-75
running mobile CW. He even had me use a chassis punch to knock out a
hole for a big honking ball mount for his mobile antenna.

My '73 Charger featured an Alda 103 with a WB4VVF Accu-memory keyer and,
since I'm a lefty, a steel shelf fixed to the driver's side door.
Velcro held the paddle to the shelf and I rested my elbow on the door's
armrest.

You've established by your comments here that you don't know very much
at all about radio contesting. We have yet to learn if you know
anything about the other activities listed. The activities can be quite
enjoyable if you are a participant. They'd likely be quite boring if
you were a spectator. Ask Leonard Anderson for details about the role
of spectator in amateur radio.

An operator-focused hobby?

Sure amateur radio allows for antennas. Radio is always much tougher
without antennas.

If they're comparable on 160 and 80m and the Omni VI doesn't hear as
well, you're either hearing about an Omni VI with problems or you're
hearing a whopper.

Problem is, they're wrong on at least two counts:

1) 13 wpm isn't much faster than 5 wpm. It's faster, but not "much
faster".
2) The mere possession of an Advanced doesn't prove that the holder
passed 13 wpm.
>
> I know a few who don't upgrade because they do indeed want to prove
> they passed a higher speed Morse code test. Seems a bit strange to me,
> but whatever.

In 1990, FCC made it possible to get any class of US amateur radio license with only 5 wpm code. All anyone needed was a medical waiver, which consisted of a simple letter from any MD or DO stating that the person seeking the waiver had more-than-average trouble learning Morse. So there have been 5 wpm Generals, Advanceds and Extras for 13 years now - longer than the license term. Thank the dead king of Jordan for that bit of historic trivia.

If anybody wants to know my code skills, I don't rely on some old test or license document. I just show 'em.

> You're an insulting little bastard, aren't you?

I have to confess, I got a good laugh out of that line.

I'm starting to develop a new theory. Two actually.

Theory 1:

Our friend Vipul is one of the trollers in this newsgroup. Although an actual person exists by this name, Our Vipul is not that person.

Theory 2:

Vipul is just a lonely guy, and posts these missives in order to get some attention. Kind of like a three year old who constantly breaks things because they have figured out it is a way to get some craved interaction with the adults. Bad attention, but attention nonetheless.

For the most part, I see this odd "I'll tell you one thing" and some argument, then "I didn't say that", then I'll tell you another thing", then more of the same. Not a good debate technique. But as long as we are willing to pay attention, like harried parents, we provide the attention he wants so badly.

This debate has no end, nor should it. That's what makes the world turn, as they say.

But there are technological obstacles to the use of modes which demand complex hard/software, and problems come in many and varied forms.
The old saw that "simpler is more reliable under austere conditions" is the reason why I believe that CW has a long and useful future.

I experienced one example of this factor not long ago. I was an early and frequent user of PSK31 and some of the other digital modes. A year and a half ago I bought a new laptop computer and used it on PSK31, Hellschrieber and a couple others. The laptop came with Windoze ME installed, but included an upgrade CD for XP. Being 'software-cautious'
I used the original ME OS for a year or so, until ME finally became so garbled and troublesome that I finally decided to do the XP upgrade, having finally reluctantly concluded maybe that wasn't caving in to the selfish, filthy-rich knomes at Microshaft.

Long story shorter, XP and it's NT kernal works great - except that now the sound card won't run PSK modes nor any other ham soundcard program I have! Whatever computer trickery I've learned so far has had no positive effect on the beast.

So once again, here I sit, relegated to the sole use of CW as my portable digital mode! It's completely trouble free and available for instant use.
All that is required is a little self-starter self-training.

Simpler may not be better but it's at least available.

Dick W0EX

It's not the mode, its the power levels used. If CW fans used high most of the time as do many SSB ops they could easily hold their own and I guarantee that the SSB ops would experience more frustration from the QRM than the CW ops would.

But since most all CW operations are conducted at low power levels, as are most other digital modes, it' makes good sense to separate the modes into sub-bands. Keeps down massive conflict among the various modes users.
I certainly hope our regulators never cave in to the few magpies who insist on "here are your bands, have a good day". Total chaos would follow, until some major reorientation of ham radio occurred. It might not even survive in any identifiable form.

Dick

> Kind of like PSK31 huh?

Most of the time. But CW isn't subject to phase distortion as is PSK31. I have observed times when only the CW IdDer on a PSK31 signal was readable, and the PSK signal would not print.

If there is one thing I have learned in life, its that you just *can't*
make things easy enough for some people.

They always have a new excuse waiting in the wings. Kids, wife, dog,
phase of the moon, whatever.

There is no point in trying to acommodate this type, nothing works. If
you somehow manage to take away their last excuse, you'll just irritate
them.

They simply do not want the license badly enough.

As my hero Yogi Berra noted" If they don't want to come to the game,
there's no way you're gonna stop 'em".

Agreed! The simplicity of the mode is a major part of it's attraction.
Some may call it cliche, but to be able to assemble a working radio out
of junk parts in a dire emergency and use it to get yourelf out of a jam
is just about as cool a thing as I can imagine.

My only complaint in this thread was that my main mode got dissed. I'm
sure all the CW affecionado's can appreciate that!

Gack! I hear more horror stories about that system. My boy has it on
his computer, and it "tailors" his internet experience - to the point
that when trying to download a new version of Netscape, that Netscape's
site insists his machine in a Mac, and *will not* let him see any
download pages but those for Macintosh. Incredulous, we went to the same
site on my computer, and I could see both. I also have spent some
serious time fixing other peoples XP computers. and on and on. It is
also non-secure to the point of ridiculousness.

I won't buy another PC until a new functioning OS is produced. If my
machines get too slow, I'll get a MAC and run my ham programs on my old
laptop.

In the meantime, think "Windows 2000, Windows 2000"

That's not true. The thing you want to do is called "automatic control" in Part 97, and there are a number of different types of stations in Subpart C of Part 97 (i.e. the 97.2nn sections) which are allowed to operate under automatic control. The problem is to find one of these sections that sounds enough like your intended application to allow you to defend your choice in the unlikely event that someone questions you about it.

>My question is, what about location-oriented telemetry? I'm sure they
>don't fall under the 'telecommand' type of transmission, as aren't
>coming from a controller to a controlled device. Instead, it's an
>uncontrolled device transmitting to a(ny) listener. Do you have to
>get a permit or waiver to do this type of radio telemetry?

One-way transmissions of "telemetry" are generally okay (see 97.111) but finding a section which allows automatic control of a station broadcasting CW telemetry is the bit that is more challenging. If the station was operated at 1.25 meter or shorter wavelengths you might get away with calling the station an "auxilliary station" a la 97.201, though your [a(ny)] above stretches this a bit since auxilliary stations are supposed to transmit point-to-point only. An "automatically controlled digital station", as in 97.221, might be perfect for this if the mode was an "RTTY and data emission", but I'm not sure CW qualifies so you'd need to get another opinion on that. You might get away with calling the station a "beacon station", running under 97.203, but you would want to see how guilty you feel after reading the definition of a beacon station in section 97.3 before concluding this. And, with any of these, there is also the issue that even automatically controlled stations are supposed to have a way to turn the transmitter off if necessary, something which may add complexity to your design depending on how dangerously you want to live.

There aren't really any permits or waivers which allow you to do something in the ham bands not allowed by Part 97. Instead of deciding exactly what you want to do and then looking for a section of Part 97 which allows it, however, what you might do instead is to pick one of the sections which permits automatic control and tailor the design of the apparatus you attach to the balloon to look enough like that section that you'll be able to defend the design with a straight face on the off chance the FCC asks about it.

Thanks for the info! However, I'm still debating what frequency and
power output I'd need. I want to be able to hear CW when it's
transmitting from only 5,000 ft and up to 40 miles away. I believe
this would be line of sight...

My first "guess" is to use the 6m band with a power output of atleast 1 watt. Does anyone have any better suggestions of advice to offer? Cost and weight is another issue... hopefully, whatever transmitter I chose would ideally be under 1/4 lbs.

Thanks in advance for any responses...
Dave

Hi Dave,

Amateur radio has a system called "APRS" which does exactly what you describe. Do a web search on APRS and you will find a wealth of information on it. This system which was first develped by hams is now embedded in commercial products like OnStar and other various flavors of AVL systems.

Thanks for the reminder. I'm almost in my 90 days to renew my ticket. I *almost* was going for a vanity callsign, but they are raising (or raised) the rates. Heck, I thought as a former call holder (I did find the original ticket in an *old* wallet), I might be able to get WN2CJV :) That ought to go over well on the repeaters :))

Six meters would be a bad call for this. Even with only 1 watt of power, frequencies above 222Mhz would be the more appropriate choice for what you're doing.

COOL!

One of the reasons I kept this 2 land callsign all these years in 3 land is to remind me of the Finger Lakes region, the canal towns, and the Hudson valley. If you hear any Drumlins on the air, say hello for me.

>But that begs the question "Why does CW need special CW-only
>bands to protect it from SSB/other modes?".

Vito,

The only CW-only subbands in US amateur radio are 50.0-50.1 and 144.0-144.1 MHz. The non-phone parts of the HF bands are not CW-only - they are all wide open to all authorized data modes that meet the bandwidth and data rate requirements.

One good reason for those non-phone subbands is that narrow and wide modes don't often share spectrum well. The narrow mode users, with their selective receivers, can coexist much closer together than the wide mode users.

Another good reason is to encourage the use of spectrum-efficient modes. Five to ten CW QSOs can fit in the spectrum space needed for just one SSB QSO. PSK31 is just as narrow if not narrower. Why reward modes that use more spectrum?

I've been reading your comments here for some time. In all that time, I
haven't seen a post where you appear to be "the smart one". In fact,
you typically come across as a screwball.

Could be that one of the Omni VI's bandpass filter relays is not
functioning. That could result in the hearing problem and harmonics.

You've got the right idea! I have tools but not like my neighbor's wood
shop. He has a planer, a joiner, a shaper, table saws, cut off saws,
power miters, power planers and the like. I needed some replacement oak
flooring recently and we went to his "oak pile". Within the space of a
half-hour, I had all the stuff I needed.

> Son-in-law sed "S--t, we'd have to have this place rezoned to

K3WW the guy who came home from Dayton with an Orion is a churner but
with a twist. From what I'm told of his habits he'll be among the
first to buy any new competition-grade xcvr if it looks like it has
possibilities. He'll then take it into battle and if he likes it he'll
keep it and run it's ears off for years. However if whatever rig
he's been using is better than the new rig he'll dump the new rig he
just bought ASAP and cheerfully eat the loss. He's sunk a lotta
dollars into his breed of "users reviews". His opinion of the Orion
will probably be indicated by whether of not he unloads it following
the CQs or if he uses it in the ARRLs too.

They're very easy to learn. Sit down. Scan panel. Operate. Jim used my
940 and two minutes after he parked himself in front of it he was
fine. Goose is gonna need beaucoup parts rigs and all the bench smarts
he pull up as time goes on though. No thanks.

> > Then I'm gonna offload it. Superb radio but it's full of creaky old
> > point-to-point wiring, parts are quickly becoming unavailable, etc.
> > It's time.
>
> Yep. It is worth it to get the thing repaired so you can get some cash
> out of it toward your Orion *grin*.

I should be able to squeeze $700 out of the 940. What I do with the
$700 is pure conjecture at this point except that it'll somehow get
plowed back into ham radio. Ditto the meatball 75S-3B but I might keep
the R4B, it ain't worth selling but it is a very nice backup rcvr.

I'm on a jihad to dump everything I gathered up before, say, 1995. All of it. I have cubic yards of old CRAP going back to the '50s, WW2 and in one case a rcvr which looks like it's outta the 1920s. Maybe it's a TX, dunno. Nice woodwork whatever it is. Want a mint 0-260 vac 30 amp 1ï¿½ Variac? Only weighs 150 pounds. Has a reddio knob and a half, a real two-hander. Also have the 7.5 kVA pole pig plate xfmr which goes with the Variac which is not feathers either. The pair ran stone cold feeding a pair of 4-1000As. Back a piece.

> On FD, there's always a chance that I'll get caught with my pants down

> squares on 80m and even 160m are becoming more common.

I guess but they're not exactly garden variety, you're still in the "top 5%". When I get into a pileup with that crowd (YOU GUYS)I go away and peck my way up the band for 15 minutes or so and let 'em finish obliterating their particular 10 Khz of band and each other whilst I'm elswhere bagging even more weak DLs. Then I go back down the band and snipe the goodie after the horde has rumbled off to the next spots callout. My two most memorable catches using this technique were TT8AF and VR6TC, both on 40 CW when they were lonesome and calling CQ. Dropped my call on both only once.

> A friend of mine

> verticals and dipoles by a wide margin and most of hamdom is still using
> verticals and dipoles.

The 2 el. is also a lot lighter, easier to put up & maintain and doesn't put as much wind load on the tower, mast & rotator. Unless the 3 el. is a quite long boom version the difference in performance won't be noticeable. Putting up a 3 el. 40 is four times more of a pain in the ass than is putting up a 2 el. 40. I agree, he'll think he died and went to heaven with any 40m 2 el. rotary loudenboomer.

> I figure I'm good for another decade of climbing.

That'll be about right, I've noticed that about the time the Social Insecurity checks start to flow thru ham mail slots the climbing belts start to collect dust.

Hee! Can't folow a snap line eh? I think I'd have enjoyed that. Since
it wasn't my trench.

> I did the other myself after loosening the dirt with a
> garden tiller.

Thatsa a good idea. The guys around here who live in the woods don't
bother with much digging. They'll bury enough to get from the house to
the far edge of whatever lawn they might have then they just dump it
on the surface thru the brush to the towers. N3RS must have 10-12 runs
of one inch hardline snaked thru the woods behind his place. Ya watch
where yer feet are in his back forty or ya land on yer butt.

OK, doesn't take much to figger out what general area he visited. A
lotta that bunch ain't too swift but there are reasons for that. Which
discussion I'm not taking into a public place like this.

> > Unassisted is certainly an option. I gotta at least try operating
> > assisted, maybe I'll like it, maybe I won't. I'm OK with operating

> > with the mults.
>
> That's typical of the low power/small antenna guy. Starting a run and

> holding a frequency are extremely tough under those circumstances.

Even when I had a decent station running was a hit & miss proposition. Call CQ nobody answers. Work some LZ who had been calling CQ and five guys tail end him and call me. Then five more. And all of a sudden yer "rate" is 200/hr. Three minutes later yer rate drops to zilch and ya go back to sniping. Ya deal with it.

Not disagreeing given most rigs but seems to me that RF-selective
receivers coupled with "sound card" AF filter technology could allow
narrow mode users to effortlessly "squeeze" between SSB QSOs and that an
SSB rig with notch filters like found in PC sound cards could eliminate
any narrow-band QRM, allowing both modes to coexist on the same band.
>
> Another good reason is to encourage the use of spectrum-efficient modes. Five
> to ten CW QSOs can fit in the spectrum space needed for just one SSB QSO. PSK31
> is just as narrow if not narrower. Why reward modes that use more spectrum?

The flaw in 'efficiency' is time - at least for manual CW. Except for
the gifted, most of us talk far faster than we can copy code or even
type so, while it takes a fraction of the spectrum to send a givin
amount of info via CW, it takes a lot more time, and the two balance
out.

I heartily agree from a "hobby" standpoint but the problem with Morse
for emergency use if that few people likely to hear your signal will be
able to copy Morse, and that will only get worse. That's why I advocate
tap-code ... for its simplicity.

Speaking of things that aren't so, Reagan was not conservative in any true sense nor did he shrink government. He was a big government borrow-and-spend Republican. The difference between him and his "big government liberals" is that he borrowed $billions to make government even bigger and more intrusive then went home leaving Democrats to raise taxes to pay for it. Funny how "liberals" turned Reagan's huge deficit into a surplus and now a "conservative", is plunging us back into debt. Orwell's doublespeak has indeed become the language of our politics.

Sometimes time is of the essence in history and we're too late. Hoards of people were attracted to radio 25 years ago and IMHO the "techies" among them would have transferred that interest to amateur radio but for having to learn what had already become an archaic hobby mode. By the time no-code licenses appeared the "hordes of techies" had moved on to newer things. Sic semper something ...

Vito, your argument sounds good, but experience just doesn't bear it out. I've never known anyone who really wanted to get into ham radio that couldn't do it, although I certainly concede that there probably have been some. But what I experiencd and have so often seen is that most of those folks just don't want to do it badly enough to avoid being "put off" by such things as learning and practicing Morse code. The people who really want to wouldn't think of being disuaded by such a thing.

As for it's archiac attributes, that view is definitely held only by persons who never became even modestly proficient at its use (and I know there are always exceptions). But anyone who has done so clearly understands the communications capabilities involved, and the simplicity of it all-even though some of them deny it. There is so little overhead needed beyond the necessary selftraining.

SB QST @ ARL $ARLB038
ARLB038 New 60-meter band becomes available July 3

ZCZC AG38
QST de W1AW
ARRL Bulletin 38 ARLB038
From ARRL Headquarters
Newington CT June 3, 2003
To all radio amateurs

SB QST ARL ARLB038
ARLB038 New 60-meter band becomes available July 3

The new five-channel 60-meter domestic secondary amateur allocation becomes available to US Amateur Radio operators at midnight local time on July 3. The FCC Report and Order granting the allocation was published June 3 in the Federal Register. Federal government users are primary in the 5 MHz band.

The FCC has granted amateurs use of five 2.8 kHz-wide channels with center frequencies of 5332, 5348, 5368, 5373 and 5405 kHz. The channels will be available to General and higher class licensees. The only permitted mode will be upper-sideband USB phone, and 50 W ERP is the maximum power allowed.

Users of the 60-meter channels should set their carrier frequency 1.5 kHz lower than the channel center frequency. ARRL suggests restricting transmitted audio bandwidth to 200 Hz on the low end and 2800 Hz on the high end for a total bandwidth of 2.6 kHz. ARRL recommends that amateurs considering modifying existing amateur equipment for operation on 60 meters contact the equipment's manufacturer for advice.

>> >
>> >Then you aren't paying attention.

The descriptions you and W3RV give of serious contest stations are perfect
examples. There may not be a lot of homebrewing of transceivers at those
stations but there's a lot of practical examples of electrical engineering
there.
>>
>> Yes, I am paying attention. Ham radio is an operator-focused hobby,
>> allowing for antennas.
>
>An operator-focused hobby?

Of course. Our licenses are primarily for operating, not building. Anybody can build a radio station, for any frequency, mode or power level desired. No license required if it's on your own property and you pay for it yourself, though a building permit may be needed for the antennas.

But if you want to operate a station that exceeds Part 95 limitations, you need a license.

Extra hands always appreciated. Particularly at take-down.

>Our club has a pretty involved operation, and we can always use
>some more help.

One of the best Field Day-ers I know is a good friend who never actually
operates an FD station. He shows up early, brings all sorts of useful goodies
and tools, helps set up, runs errands, socializes when the setups are running
(but not with the ops!), then goes home and gets a good night's sleep. On
Sunday he shows up and helps take down and put away. And he's been doing it for
years. 0

>can get a good signal on the air. I would submit that a beautiful setup
>can be made that will radiate virtually nothing.

Sure. Been there done that.

I remember one year at a two-transmitter setup. The station I was involved with (the CW tent, naturally) used a homebrew trap inverted V with the apex at 35 feet. Across the field, the 'phone station had a brand-new-in-the-box commercially made "Carolina Windom" strung up between two trees - maybe 45-50 feet up. Both stations had 100-watt middle-level HF transceivers (Kenwood TS-450s, as I recall). The CW station was working at least 3 stations for every one the 'phone guys were working. Somebody got another antenna (G5RV? vertical?) for the 'phone station, and their results improved mightily.

>So how does Vipul
>suggest that we test out his station setups?
>
Exactly!

It's like building the race cars, taking them to Indy, and then deciding the winner based on who got their car to the track first.

Maybe. OTOH such an approach increases the complexitry of equipment required
but offers no real advantages that I can see. Experience has shown that, in
general amateur practice, signals coexist better with similar signals - CW
against CW, SSB against SSB, etc.
>>
>> Another good reason is to encourage the use of spectrum-efficient modes.
>> Five
>> to ten CW QSOs can fit in the spectrum space needed for just one SSB QSO.

>
>The flaw in 'efficiency' is time - at least for manual CW.

Not really - see below.

>Except for
>the gifted, most of us talk far faster than we can copy code or even
>type so, while it takes a fraction of the spectrum to send a givin
>amount of info via CW, it takes a lot more time, and the two balance
>out.

I disagree. For one thing, in my experience, most people can reach 30-35 wpm with code if they actually use the mode regularly. There are exceptions, of course. "Gifted" doesn't start until around 50 wpm. Typing/reading speeds are usually even faster. Plus with a send buffer, a slow typist can be preparing a response while receiving the other station's transmission.

Add to this the fact that CW and other digital modes can take full advantage of abbreviations and prosigns, and the effective communication rate easily doubles.

Yes, people talk faster, but most people's speech is full of pauses, redundancies and other delays. End result is that actual information flow via the spoken word is far slower than the mere wpm would indicate.

Do 'phone ops spend 1/5 to 1/10 as much time on the air as CW ops? Only that way would there be a balance.

Also, if the information being transmitted is to be written down (such as a formal message), the maximum speed is limited by how fast the receiving op can write or type. Most people have a hard time writing longhand legibly above about 25 wpm.

>It's the difference between schooling and education. A degree is supposed to
>indicate a level of education, not just schooling.

Education is so stuck in its methods, that it cannot see common sense. And they make you take so many worthless courses and leave no time left for worthwhile knowledge.

Too much <traditional> education is not good for you. One person told me that some of the dumbest people he worked with had advanced degrees and some of the smartest people had no college degree.

In the future, I will forbid my children to go to school as much as it is allowed. I will do some research on home-schooling.

>There are people who enjoy playing golf, and people who enjoy watching others
>play golf, and people who enjoy doing both. Same principle.

With contesting, you keep adding the number of contacts. I like to accomplish things. Kind of like when I'm in a boring EE class. I can't wait until its over. Contesting goes against my nature.

This person is no longer in this country. He left the country to marry some girl he met online. He told me he had plans to stay in that country and work over there. So, there is no truth to that "rumour".

>tap-code ... for its simplicity.

I don't know if thats really a problem. There could be secret Morse code transmissions throughout society. Most people would not recognize them and ignore them.

A select group of individuals from all professions would have the common bond of real time Morse code recognition. Messages can be sent and secret meetings held to discuss issues relating to this activity. I can see some signs of this trend right now.

They live...

In Michigan we have/had a similar person.... John Engler! Raised a form a tax 50% which affected the lower-middle-class and lower class people the hardest! (the sales tax for Michigan)

In the same turn, he cut taxes in some other places, but forgot one critical point, that you also need to cut spending as well!

Amateur radio can't be about radios without being about antennas. Even the best transceiver doesn't perform without an antenna. The better the antenna(s), the better the system. Additionally, the better the feedline, the better the system.

Martti OH2BH has for years touted his Micro-DB theory. If you have a 500w amplifier, obtain one which develops 1 KW. If you have RG-213 cable, replace it with 1/2 inch hardline. If your yagi has three elements, replace it with one using four elements. If it is 60 feet high, add enough tower to make it 80 feet high. Any of these things taken separately doesn't offer much in the way of improvement. Do them all and you're looking at a real improvement in system effeciency.

Of course those things are pretty extreme. Let's take it from the Little Pistol perspective. If you have only a 100w transceiver, add a 500w amplifier. If your antenna is a dipole at 30 feet, replace it with a yagi at 40 feet. If your feedline is RG-58, replace it with RG-213. The improvements you'll see are just as real as in the first scenario.

Now, is amateur radio primarily about radio or is it primarily about antennas? Perhaps it is primarily about feedline. Would you like to revise your analogy?

As a new "blank slate" student, how are you able to determine what knowledge is worthwhile? How do you determine what knowledge you'll find useful later in life? Is it better to take only courses which you think you'll need for a job or is it better to take a broad variety of courses so that you'll have a base of knowledge which could take you through variety of jobs?

> Too much <traditional> education is not good for you.

And you know this because?

> One person told me that
> some of the dumbest people he worked with had advanced degrees and some of the
> smartest people had no college degree.

Here's a tip for you, Vipul. A university diploma is not a measure of intelligence. It is confirmation that you have successfully completed the courses required for obtaining a degree.

One of the sharpest individuals I ever met served with me in Vietnam. After leaving the military he became extremely wealthy selling ocean front real estate in South Carolina. His favorite line was, "Why do I need to go to college? I have friends who went to college. If I wanna know something, I'll call 'em up and ask 'em".

> In the future, I will forbid my children to go to school as much as it is
> allowed. I will do some research on home-schooling.

Just as you'd like to dictate what hams should be doing at club meetings and what they should be eating.

> >There are people who enjoy playing golf, and people who enjoy watching others
> >play golf, and people who enjoy doing both. Same principle.

>
> With contesting, you keep adding the number of contacts. I like to >accomplish things.

Just as important as adding contacts is the working of multipliers.
There is a strategic plan to being successful in contesting. In
addition to the plan, an operator needs a knowledge of propagation, must
develop good operating skills and needs the most efficient station
system possible.

Kind of like when I'm in a boring EE class. I can't wait until its
> over.

You should really listen to that fellow who told you about some of the
dumbest people he'd worked with having advanced degrees...

>Contesting goes against my nature.

Nobody will force you to become a contester. No one will force you to
learn morse code. No one will force you to pay attention to those
boring EE lectures.

I agree, IF one want's it badly enough. But 100's if not 1000's chose an
alternate path to satisfy their interest in communicating even tho that
path was illegal. With the sunspot cycle at an all time peak it was
easier to do most of what we do on by simply buying a "linear" and
strapping the PLL in their CB. Misguided? You bet! But with a tad of
"Elmering" a lot more of the best and brightest might have become hams
but for the code barrier.

Yes, but the exact same can be said for Latin. I hope to have the time
to regain/improve my proficiency in both when I retire.

You have a bit of a point there.

> Too much <traditional> education is not good for you. One person told me that
> some of the dumbest people he worked with had advanced degrees and some of the
> smartest people had no college degree.

The nature of higher education is a pyramid form. Those who aspire to
the top, eg a doctorates, forsake a broad knowledge base for a
specialized area. This doesn't mean that a person is an idiot, or not
blessed with common sense. It is just specialization in action.

> In the future, I will forbid my children to go to school as much as it is

Me too. And I like contesting. I'm competing against other hams and
myself, trying to better my scoers from previous years. I'a
accomplishing lots of things.

> Kind of like when I'm in a boring EE class. I can't wait until its
> over. Contesting goes against my nature.

I suppose you'll ignore this question as you often ignore pointed
questions, but here goes:

1. Why on earth are you here? You don't like hams, you don't like EE.
(whatever your defintion-you don't seem to like it)

You profess to "like accomplishing things"

So you post your missives, and accomplish nothing due to your undisguised dislike of us and what we do.

The only way in which you can be considering any of your "work" here to be accomplishing anything is if that work is indeed as a troll, and your purpose here is simply to irritate and annoy.

2. Are you a TROLL, Vipul?

Win 2000 is relatively secure, and can be made even more so with some
add ons which will keep the hackers and businesses out of your computer.
It is pretty stable by comparison to 98, although I don't have much
problem with Win98 SE. Problem is that 98 is getting old and support for
it will be dropped soon, and that means that if a program is written and
98 runs it, ok. But if not, it's TTC.

I never considered ME an actual OS! ;^) Seeing as how most people who
use it add a few extra prefacing descriptive terms that I won't print here.

And SP is a pretty train wreck IMO. Looks nice, but that's about it.
Most of what I do to keep my home machine sucure won't work on SP.

> You are the one that asked the question "What's worse?". You started it.

Three things:

First, my post was regarding your posting habits, not the thread. This thread has long migrated away from it's original subject matter, which was a friendly tweak towards the generalizations that some hams do, like those who say that all new hams are fools. I've tweaked many on that, as even some friends who have been hams for a long time might say something like "Any moron can get an Extra now". I'm quick to point out that I only got my Extra after it was moronized.

Second, you are allowd to post on anything you like. Likewise I can ask questions.

Third, I don't "get" your reply.

If we condone insider trading, even to the somewhat small extent that it was practiced by Miss Stewart, then we're saying it's OK for a small handful of "insiders" to reap vast fortunes by taking advantage of information which is not available to the general investing public. Is that fair?

If it is proven in open court that Martha Stewart did, indeed, profit from insider trading information, then she should be required to pay whatever price fits her crime. This would undoubtedly involve heavy fines, and a possible visit to some Club Med Minimum Security Retreat for Rich and Famous felons. The best thing for her to do would be to get it over with and out of the way ASAP, so she can get back into her studio bossing people around like the bitchy megalomaniac she is purported to be.
I, for one, enjoy her shows on The Food Network.

Jessie Jackson has just added former Chicago democratic congressman Mel Reynolds to Rainbow/PUSH Coalition's payroll.

Reynolds was among the 176 criminals excused in President Clinton's last-minute forgiveness spree. Reynolds received a commutation of his six-and-a-half-year federal sentence for 15 convictions of wire fraud, bank fraud and lies to the Federal Election Commission.

He is more notorious, however, for concurrently serving five years for sleeping with an underage campaign volunteer.

This is a first in American politics:

***An ex-congressman who had sex with a subordinate...

***Won clemency from a president who had sex with a subordinate...

***Then was hired by a clergyman who had sex with a subordinate.

His new job? Youth counselor.

IS THIS A GREAT COUNTRY OR WHAT?

If it's really the National Rifle Association - simple: They stand for the citizen's ability to enjoy his constitutional rights and they see amateur radio as furtherance of the First Amendment. They may be a "Second Amendment organization" but that doesn't mean that they shouldn't be vocal about a citizen's other rights when the opportunity presents itself.

There are some instances where the NRA is good and the ACLU is bad, and the government is always bad, but sometimes necessary.

Oh I don't know..... sometimes it's just too obvious to be clear.
first time I saw a Mexican car license on the front of a car in far southern Ca. I noticed it said "Front BC" on it. Asked my son, a longtime resident, what that was all about and turned out it was the front plate on a car from Baja California.....
I suppose it they didn't label them some folks would 'split' the set of plates onto two cars.

When the news of this fiasco first broke I concluded right then that we'd soon see just what the little lady is made of. I said that if she was anywhere near as sharp as she portrays herself she'd very quickly call a news conference and say into the camera, "I see that my action in this matter has been misconstrued, and therefore I am giving the entire $200,000 to my favorite charity. In fact, to show that my heart's in the right place, I'm doubling it and adding an extra $100 G." The expenditure of that half million, probably about of as much concern to her as a couple hundred bucks would be to most of us, would have instantly settled the matter. She'd have had an automatic nice little income tax deduction-assuming she pays any in the first place. Instead, she has trashed her entire company and I see on TV that her stock has fallen in value some $400 million.

Smart? I don't think so.

I thought a similar thought about Bill Clinton years ago...The first "uh
oh" to hit the streets on him was his alleged protests at Cambridge.

I have all-along thought that if he'd had stood up, said "You're darn
right I protested the war...it was my right to do so", that even the hawks
would have to give him credit for forthrightfulness. The media would have
almost immediately dismsissed anything Genny Flowers, Paula Jones or Monica
Lewinsky had to say.

Sounds good, Steve. I just keep coming up with this vision of the man and hand (er sock puppet) sitting in a room, glaring at each other because they are so mad they can't stand each other any more.

Wasn't that Senor Wenches (sp?) who had a skit something like that? I remember him on Ed Sullivan when I was a kid.

What did you do to the puppet Vipul!!!! Don't hurt the puppet man! No matter how mad you are at it right now, things will look better if you cool off for a while. Just tell me the puppet is okay!!

What does the "N" on Nebraska football players helmets stand for?

The "N" stands for "Noledge"

Yeah, that's a favorite here in Lion country. Not that we have anything
to brag about lately.....

You hit the nail on the head. The Conservative groups only cut income taxes and various safety nets. The net result is that sales taxes, property taxes, and other taxes go up. Our local sales tax just went from 8% to 8.25%. At least the Democrats had a surplus.

In Southern California, there was a time where repeater owners had to be armed
to protect their equipment!

The infamous 147.435 repeater had received damage from bullets being shot at
it about a decade ago.

I used 98-SE for a few years and it did OK. I even used the latest version
of WIN95 that had USB suppport and it was much more stable than earlier versions. And in
truth, I find XP to be much more stable than any of the others
and that makes sense as the XP kernal works differently than earlier versions that allowed
the software to rule things, it remains in control- at least this is what I've read. Seems
to
work that way. I have software lockups but never any that requires rebooting the OS as
before. Just 'end task' and reload the
software pkg.

But Xp sure has lots of incompatibility issues with many software pkgs that weren't written
for XP, and some that were. For instance, I have an HP digital camera and a HP trimode
printer/scanner/copier, both supposed to be XP compatible, and when I tried to install the
software for both, each driver package tried to take over the other. Neither wants to work
when the other is installed so that it works! I've reinstalled each of them several times.
Nonsense.

> I never considered ME an actual OS! ;^) Seeing as how most people who
> use it add a few extra prefacing descriptive terms that I won't print here.

Ya can add me to that list!

> And SP is a pretty train wreck IMO. Looks nice, but that's about it.
> Most of what I do to keep my home machine sucure won't work on SP.

Haven't had an identifiable problem in that regard to date. But I use Netscape to browse, usenet, and email, not Exploder nor Outlook, and never open any attachments. Plus Norton, of course.

Got one the other day that said it was from Microsoft that insisted the recipient open an attachment for an update. Right! Plonk!

>>co-workers.
>
> The company rat.

Stealing in this business is very common and likely, my new manager told me.
Employees and suppliers both steal.

Suppliers steal by not giving the full supplies. If 1000 boxes come in, at
least one of them may be empty. Thats stealing. Suppliers WILL steal, in this
business, if you don't check the supplies.

I have to make sure other emplyees and suppliers don't steal.

>>Plus problems with a co-worker slacking off that I will have to do that
>>person's work.
>

From (N2EY)

>>> Education is so stuck in its methods, that it cannot see common sense.
>
>Which is?

Knowledge you can actually use, not worthless knowledge to occupy your time,
and which you will forget after the course is over.

>Give us some examples of "worthless courses" you had to take and "worthwhile
>knowledge" that was crowded out.

Worthwhile knowledge was crowded out because there was no free time left after
having to take the required courses.

Some worthless courses I had to take: literature (just to meet requirement),
biology, physics (not for electronics), linear algebra (very worthless), Pascal
(should have had C class, no one uses Pascal), probability.

Examples of worthwhile courses missed: automechanics, popular culture- movies,
music, sports, practical electronics projects.

You gain more skills with worthwhile information than worthless information.

>What engineers need is to
>learn how to think about engineering, and the skills to solve engineering
>problems.

Problem is everything is approached in one way only, sitting at a desk, when in
reality many more skills are required. By presenting information in a limited
framework, the student does NOT gain the required skills.

This affects any course, whether you take an economics course or an EE course.
(Less true of EE courses, but still true).

>>> Too much <traditional> education is not good for you.
>
>BULLSHIT!

I just showed above why. The above worthwhile course skills are not for fun.
They are examples of needed skills to do anything better.

>>> One person told me that
>>> some of the dumbest people he worked with had advanced degrees and some >>
>of the smartest people had no college degree.
>
>And you're out to prove him right?

Its something I agree with also.

>Do you want a
>surgical team coposed of doctors and nurses who are highly educated,
>certified
>and experienced, or ones who have the bare minimum requirements to call
>themselves doctors and nurses?

No, I want to see quality education. People are stuck with what we have now. If there was competition in the educational system, it could pressure schools to improve their quality. Quality in both the selection of courses, and in each course itself. Courses less controlled by politics and rationalizations an more by people knowledgeable in the subject matter.

>Normally I'm all for home schooling, but there are a few exceptions.

I need to find quality homeschooling. Also, the state may require worthless requirements like certain SAT or MCAS scores for homeschooled children. I don't want them to have to meet those worthless standards.

>Making more contacts is an accomplishment. End of story.
>>
>>> Kind of like when I'm in a boring EE class.
>
>If EE class is boring, you shouldn't be in EE.

EE is not boring. Some of the classes are. Some of what should be interesting is presented in a boring way and one can learn more at the same time.

>Ya broke da code

Unlike me- I don't do code.

> 2. Are you a TROLL, Vipul?
>>
>Where are the three billy goats?

I am not a troll. I do not live in the mountains or forest. (You don't have to read from this point down).

The History of the Trolls
by Bjï¿½rn Schulze and Trygve Torgersen
(Creators of the NyForm Trolls)

Far to the North where the winter storms whip the weather-beaten coasts, you will find a long and narrow country. Here you see dark forests with moonlit lakes, deep fjords surrounded by mighty snowcapped mountains, and long rivers and cold streams cascading down the mountainsides.

Nowadays this country is covered by snow and ice only six months a year. A long, long time ago, however, there existed a massive glacier that brooded over the entire country for thousands of years.

As the climate gradually warmed and the glacier slowly retreated to the North, man to the south of the glacier followed in its wake. Looking at this country

and finding it to be magnificent, they considered themselves to be its first inhabitants. People settled there and named it Norway.

They were themselves called "nordmenn" (Men of the North). It did not take them long, however, to realize that on this land there were various other creatures hiding out in the forests and mountainsides. People did not know what these creatures were, but they were generally believed to have supernatural powers and they came to be known as trolls.

The trolls would come out of their hiding- places only after sunset and they would disappear before the morning sun arose in the East. Direct exposure to the sun could cause them to crack, turn into stone and possibly burst. On occasion the trolls would evidently forget to hide from the sun and rock formations can today be found in various places with troll-like features.

The trolls were mostly seen on bright moonlit nights or during stormy nights that could frighten about anyone who happened to be outdoors at that time. The trolls had very distinct features. They had long crooked noses, only four fingers and toes on each limb, and most of them had long bushy tails.

Some trolls were giants and others were small. There were stories of two-headed, as well as three-headed trolls, and even a few had only one eye in the middle of their wrinkled foreheads. Others had trees and rough moss-like growth all over their heads and noses.

Although they were shaggy and rough haired and most looked frightening, they were also known to be good-natured and naive. They were so naive in fact that even sly peasant boys could, on occasion, easily trick them. Stories about such encounters are common in the fairy tales.

Most trolls lived to be hundreds of years old. However, because of the trolls' extremely shy nature, their true origin, their lifestyle or what surprises they might pull have always been a mystery. The ability to transform themselves counted among the trolls many supernatural skills.

The fairy maidens, called "Hulder", could transform into incredibly attractive young ladies. However, they could not get rid of their tails. Hunters' and farmers' sons, who were lured to the mountains by these fairies, would usually check for tails on their newfound beauties.

The wrath of the trolls was boundless. It was therefore considered very important not to make them your enemy. If a farmer did provoke a troll, his livestock might be subject to disease or harmful sickness, or worse things could happen.

On the other hand, a good relationship with the trolls could be very rewarding. Now, even in modern times it is well advised to keep a good standing with the trolls since you never know when you will meet one yourself.

The next time you go to the dark forests and the mighty mountains with their deep lakes and roaring waterfalls, just remember, they probably mean no harm. But be aware, in the twilight hours you are no longer alone. Then it is only you . . . and all the trolls!

So what is the story behind the story here? Why is the FCC assigning
"channels" to the US ARS? Is this a first?
Why not just a segment or sliver from 5332 to 5405? Why dictate USB mode
only? What about CW, RTTY, Slow Scan, etc.?

I think we can overlook the "new" ARRL's recommendations on audio passband
edges with no definition of the edges. I suppose they think we all use DSP
rock wall filters in our audio now.

The same goes for ARRL encouraging the ARS to do no tinkering without
consulting the manufacturers. A few years back, rig conversion articles to
cover 60 meters would have made for several issues of QST.

Well, if you can't do CW here, then it must not be a real Amateur Band.

Up to now, CW was permitted in ANY ham band.

>Well, if you can't do CW here, then it must not be a real Amateur Band.

This band was not intended to be for international communications. It was
"requested" as a domestic assignment to help fill the propagatioon void between
80 and 40 meters.

>Up to now, CW was permitted in ANY ham band.

C'mon, fellas...Like it or not, this is the way it's been headed since
April of 2000. This is the first bitter bite.

This band was requested as a domestic assignment, primarily to be a propagation stop-gap between 80 and 40 meters. It was never intended to be a "DX" band or general purpose band.

>I think we can overlook the "new" ARRL's recommendations on audio passband
>edges with no definition of the edges. I suppose they think we all use DSP
>rock wall filters in our audio now.

State of the art has put the typical SSB signal at about 3Khz for over 20 years now. It shouldn't be such a stretch to keep our signals within this parameter, especially when we are limited to 50W PEP

>The same goes for ARRL encouraging the ARS to do no tinkering without
>consulting the manufacturers. A few years back, rig conversion articles to
>cover 60 meters would have made for several issues of QST.

Quite a few years ago, Clay. The typical "rig conversion" these days is a matter of a snip here or a diode removed there. The steps for same for most popular HF or V/UHF rigs are available from any number of Web sources or "hackers" guides.

After the last minute intervention of the NTIA we are lucky to have these "channels", let alone any "band" assignment.

Clay N4AOX wrote:

> So what is the story behind the story here?

Well, here's my take...

> Why is the FCC assigning
> "channels" to the US ARS?

Mainly because:

1. NTIA didn't want us to get anything at 5 mc, but the really didn't think they should slap us too hard what with all our emergecncy comms work in the recent past, such as at WTC following Sept 11.'01 etc. So they gave us the very barest minimum that would satisfy the original reason for the request for an allocation at 5mc- just enough for us to be able to actually carry on emergency communications in that region. And they insisted on USB only simply so that the already-assinged users would be able to copy our transmissions to ID whatever hams were there. No matter that USB might be the poorest choice of mode under austere conditions.

> Is this a first?

In 100 years of ham radio, yes. (with the sole example of a discrete HF amateur frequecy for the state of Alaska for emergency communications)
If there's any other incidence of channelization ham radio I haven't seen it, and I've been active in ham radio for almost tha last of that hundred years.

>
> Why not just a segment or sliver from 5332 to 5405?

Chances are that the channels assigned correspond to channels appearing on the equipment of users already assigned to that part of the spectrum. That would make it easy for them to tune in hams where they mignt not be able to if our assignments were not channelized. This follows the logic above.

> Why dictate USB mode
> only? What about CW, RTTY, Slow Scan, etc.?

See above

>
>
> I think we can overlook the "new" ARRL's recommendations on audio passband
> edges with no definition of the edges. I suppose they think we all use DSP
> rock wall filters in our audio now.

I wouldn't think so. But still, no one seems to be too concerned with it either. No tolerance has been assigned, as far as I've been able to determine. Maybe they intend for us to follow the same tolerances assigned to the other users. Probably as long as hams use the correct amount of frequecy offset below the channel frequency they'll get along OK. Want to bet on it, though? That's what you'll be doing when you operate on 5 mc.

>
>
> The same goes for ARRL encouraging the ARS to do no tinkering without
> consulting the manufacturers.
>

That one looks like a non-starter. I don't see the manufacturers being anxious to hand out that information freely given that they could later become the target of accusations of fault when something goes wrong, goes wrong, goes wrong, goes wrong......
After all, they can insist that their gear wasn't designed to work on 5mhz so it may not function as designed there, and they won't guarantee the specs will hold for that frequency range.......

I guess you adhere to the vocational type education. Everything there
is taught on the basis of relevance. Sounds good until you realize that
you may change careers. In my working life, I have changed job skill
functions several times probably 5 times over the course of my tenure.
If I were to have only been educated in a "relevant" fashion, I would
have had a much rougher time.

There are countries where the so called relevant education is more in
evidence. Of course moving from one vocation to another is nowhere as
easy there.

None of the above classes are worthless. How do you know what you might
use in the future. It says more about you than it does the classes.

> Examples of worthwhile courses missed: automechanics, popular culture- movies,
> music, sports, practical electronics projects.

Many of these are also worthwhile. I might take exception to popular
culture, which to me celebrates ignorance.

> You gain more skills with worthwhile information than worthless information.

I enjoyed the story, but applying your rules of relevance, isn't this
a worthless story? I mean it's kind of like literature.

I suspect there are some people in this here chatrum who don't even acknowledge the existence of amateur radio activity above 30MHz, but for those who aren't living in the 1920s, here is another reason for concern about VHF and above allocations.

This time it's from W himself:

"We must unlock the economic value and entrepreneurial potential of U.S. spectrum assets while ensuring that sufficient spectrum is available to support critical government functions."

http://boston.com/dailynews/156/economy/Bush_orders_broad_review_of_ra%3A.shtml

Do ARRL and/or radio amateurs have an answer? Does that answer have enough zeros before the decimal point if you know what I mean wink wink nudge nudge say no more say no more?

The Alaska Emergency Freq (5167.5 mHz)is apparently "owned" by the
Alaska State Troopers. You should relate to that . . . everybody and
their cousins have access to it. Mountain S&R outfits, hams, boats &
ships, medical types, police, bush pilots, remote hunting & fishing
lodges, etc. In addition to the Troopers monitoring the freq 24/365,
so does the USCG, FAA, and the military on the gov't side.

Hamdom is not new to the concept of channelized ops. Ref: MARS & CAP
freqs.

It can be much worse than that. You can completely fry specific ham
xcvrs if they're diode snipped and operated in certain specific
frequency ranges outside the ham bands. That's one reason why the MARS
& CAP freqs are (always?) just outside the ham bands.

60M is not "just outside any ham band". I'd do a lot of research on
any of the published mods for my xcvrs before I got the tools out.

The morale at that place must really suck. Probably some office
politics type
infighting and backbiting too. I've seen it. Bell Labs, which had the
reputation
of being the best place to work on the planet turned out to really suck.
Nothing
but political turf wars, sabotage, and backbiting. AT&T (before it
became Lucent)
was so big that it was virtually impossible to have any impact on the
profitability

of the company. So projects were done not because it might make the company money, but because your boss thought it looked great to his boss.

Heard an urban legend about the invention of the transistor. Turns out it was
a project the boss told the guys to forget about. And it became a "bootleg" project, done after hours and hidden in supply cabinets during the day. Well,
the damn thing worked, not that it was the kind of transistor normally produced
today. But you gotta start somewheres. I doubt Bell Labs could invent another
transistor though.

Thanks. However, I doubt I'll ever get back to the EE field.

>>>Stealing in this business is very common and likely, my new manager told
>me.
>>>Employees and suppliers both steal.
>>>
>If it's just one-ies two-ies, so what? Cut 'em some slack,

Problem is you have to account for everything. Otherwise the amount lost can be significant. I've heard stories of significant amounts missing.

I heard one story about suppliers bringing in trucks and hiding old tires among the items. You look at the pile and it looks like the right amount. You sign that you got it. Later, as you pick up the pile you see the worthless tires.

Also, a significant amount of cash "flows" there. Some people try to hide that and take some of it. I heard something about laundry, but I don't know what he meant.

>The morale at that place must really suck. Probably some office
>politics type
>infighting and backbiting too.

Its not a fun job <for those other employees>, but someone in society must do it.

>Bell Labs, which had the
>reputation
>of being the best place to work on the planet turned out to really suck.

This is nothing like that. This is nowhere near as interesting as that. This is more of a low skill environment.

Its not anything related to the EE field. They told me that they would be paying me more than the most I made as an EE, but its not a glamorous job.

> Nothing
>but political turf wars, sabotage, and backbiting. AT&T (before it
>became Lucent)
>was so big that it was virtually impossible to have any impact on the

>profitability
>of the company.

Don't forget- the political connections were essential. I've seen poor performers that knew someone get a promotion. On the other hand, you could be very smart, but if you did not have the right connections, you would not advance.

>> You're cannon fodder, Vipul. Quit now and hire in at McDonalds. At
>least
>>they have benefits and free meals.
>>
>He may be right. The big bosses may need a scapegoat to blame for this
>mess. Bring
>you in, not support your decisions, have you fail, then can you blaming
>the entire mess
>on you.

McDonalds will not pay as much as this job so why would I go there?

I believe the manager is honest. Or else he would not have warned me that stealing is common and that its not an easy job. With a salary increase over my previous EE job, I will risk it. The manager told me to meet them after the employees were gone. I guess they did not want the other employees to see me before I start there.

I know I got the job. I can guarantee that. (Steve, K4CAP wants to be sure I will be leaving the group). For certain reasons I cannot tell you when the start date is. Then, its 7 days a week for long hours. Problem is they have just me responsible for preventing theft on two shifts. (Each shift is 8 hours). I don't know how I will be able to accomplish that.

>I guess you adhere to the vocational type education.

No, not just vocational. A combination of technical (for example EE or other major), and PRACTICAL education.

Competition in the education system, more importantly competition in the ideas of education, is the only way education will improve. And it needs change and improvement now. For some people, it just doesn't meet their needs.

>Problem is that you don't really know when
>parts of your education may be needed. Tell me what you will need 5
>years from now.

>How do you know what you might
>use in the future.

Its common sense really. Nothing that I knew that others didn't

I made a list before I started my first semester of college. I looked at the list a few years after I graduated. The list makes alot of sense now. It is the useful skills I should have had.

>Many of these are also worthwhile. I might take exception to popular
>culture, which to me celebrates ignorance.

Its about being aware, not being ignorant. Traditional education keeps you ignorant.

>Where do you get your paradigms?

I can see by your arguments that you don't understand the concept I am trying to advocate.

The Commerce Department was the original administrator of radio in the USA. Only later was it handed off to the newly created FCC. Looks like we may be going full circle- you'll note that the FCC is mentioned as having a "consulting function" in the study. Hah! That's like they're a footnote to the whole deal.

Maybe the FCC antagonists will have their way. Can you say Billy Tauzin?

Yeah, I used to be acquainted with a ham who had retired from that org. He was the guy who told me about them building all thost T^2FD antennas using Radio Shack inductive resistors as
the terminators because they worked better than non-inductive typed. But I guess they had to
put someone in charge of it.

Well I guess that's one way to looking at it, but not one I'd have chosen. MARS is really a military service for which a qualification is holding a ham radio license. But it's sure not
that much like ham radio otherwise (experience talking here).

If you happen to have a rig that selects a bandpass filter following the final stage which just happens to have a resonance or the wrong sort around the 5mhz area you WILL let some of
the smoke out.

> That's one reason why the MARS
> & CAP freqs are (always?) just outside the ham bands.

Actually that goes back to the days when most hams had to depend on their
rig's frequency overlap beyond the band edges to get it to work MARS. Most had 25 to 50 khz overlap past the band edges and the MARS frequencies were deliberately installed within those
overlaps.
. MARS woulda had darn few members otherwise. The diode snip routine is more of a modern artifact.

Actually, both MARS & CAP were set up, at least years ago, so ham equipment
could be used. Hence the frequencies being adjacent to the ham bands. I'd
say it's a very similar example, since when a ham engaged in such operation,
they suddenly had to fit into another radio service. That might mean
technical requirements, such as crystal control, and it obviously meant
a change in operating standards.

With this new band, the US hams are likewise expected to fit into another
service, hence the channelized operation and one mode only, though it is
indeed for ham use rather than to make use of ham skills and equipment
for another service.

>
>McDonalds will not pay as much as this job so why would I go there?

Job security. And you get to talk to "preety fems". Some of them are
even old enough to vote. The rest are on Medicare.

>I believe the manager is honest. Or else he would not have warned me that
>stealing is common and that its not an easy job.

He may have been sizing you up to see if you would play along with his
back-office dealings.

>With a salary increase over my previous EE job, I will risk it.

That's why dope smuggling is so lucrative.

>The manager told me to meet them after the
>employees were gone. I guess they did not want the other employees to see me
>before I start there.

I wouldn't be having these "back office" meetings, Vipul. Anyone who
doesn't want you to be seen talking to them has something lacernous in mind.

>I know I got the job. I can guarantee that. (Steve, K4CAP wants to be sure I
>will be leaving the group).

I don't want you to leave, Vipul. I want you to get your head out of your
butt. Your vision is clearer and the world smells nicer.

>For certain reasons I cannot tell you when the
>start date is.

We'll tell James Bond.

>Then, its 7 days a week for long hours. Problem is they have
>just me responsible for preventing theft on two shifts. (Each shift is 8
>hours). I don't know how I will be able to accomplish that.

Tell that to the troops in Iraq, then come tell me how bad your life is, Vippy.

After the FCC was formed, Federal radio spectrum management was performed by JTAC, the Joint Technical Advisory Committee. More recently, and I forget under which president, this was formalized as the NTIA, National Telecommunications Advisory Committee. Under the Commerce Department. Reports directly to the office of President. They are responsible for Military frequency allocation, as well as all the 3 letter agencies headquartered in DC. In short, all federal government radios. The FCC continues to be the administering agency for non-federal radio. Except, they are slowly abdicating their responsibility by letting more and more 'unlicensed services grow.

Whoa, slow down a sec, Vito.

I presume you're talking about the CB boom of the '70s?

The fact is that there were more CB users than hams as far back as 1963. By the time of the energy crisises of the '70s, the cb and freebander cultures (including such things as widespread disregard for the rules) were well established.

It should also be remembered that much of the cb craze was not driven by an interest in "radio" at all. Rather, it was an interest in evading enforcement of the unpopular 55 mph speed limit.

As for code being an "archaic hobby mode" in those days, remember during the Vietnam war years there was a shortage of qualified radiotelegraph operators (!) for the maritime services. While military use of Morse Code may have been declining, commercial maritime ships still needed qualified operators until 1997.

>By the
>time no-code licenses appeared the "hordes of techies" had moved on to
>newer things. Sic semper something ...

The history says otherwise:

Growth in the ARS stagnated through much of the '60s at about a quarter million hams. Then in the very late 1960s and all through the '70s and '80s, the number of US hams grew steadily. By 1990 there were over half a million US hams.

I knew lots of hams and cbers back in the times you are describing. In general, the vast majority of cb folks were interested in becoming hams right up to the point at which they realized:

1) Getting a ham license would mean telling "Uncle" your name, address, SSN, etc., and agreeing to allow the feds to inspect your station whenever it was in operation. IOW, getting a ham license made it easier for the feds to find you and enforce the rules.

2) Hams were really strict and "uptight" about following the rules - all of them. Staying in the bands, using callsigns, no off-color language, no letting an unlicensed person use the radio unsupervised, etc., etc. Hams wouldn't even give each other "smokey" reports, and would tell the FCC about rulebreakers!

3) You could not talk to your old cb and freeband friends on the ham bands unless they got ham licenses and ham equipment too. IOW, becoming a ham could mean giving up the old ways.

4) Ham equipment cost a lot more money than cb equipment

5) Ham equipment was more complicated to use than cb equipment

6) Ham antennas were often bigger, more complex, more costly, etc.

7) You had to take tests (written and code) to get a ham license

Yes, a few became hams, but most I knew did not. The "techies" were often the worst of the lot, buying up old "boatanchor" AM gear for modification and use on cb and freeband.

Oddly enough, most of those I knew who became hams are still active hams today. Most of those who were cb users gave it up long ago - right around when gas became cheap and plentiful again.

Don't forget that in 1975 the EIA proposed reassigning 220 to a new "Class E" cb service. FCC almost went along.

Should hams have petitioned the FCC to LOWER the requirements for a ham license in hopes of attracting these folks? That's what you're proposing.

Complete code test elimination was and is prohibited by ITU treaty, as well.

Here's a repost of some info about growth in US amateur radio. Note that growth in the '80s exceeded growth in the '60s,'70s and '90s, even though there were no code test waivers back then and all US ham licenses required a code test.

Repost starts here:

For a historical context, here are some numbers on the growth of US amateur radio in the past 30 years or so. All numbers are rounded off but are accurate to within 2%. Sources are various Callbooks and US census data.:

US Hams:

1970: 270,000
1980: 350,000
1990: 514,000
2000: 680,000

Growth Rate:

1970 to 1980: 29.6% (120,000 net growth)
1980 to 1990: 46.8% (164,000 net growth)
1990 to 2000: 32.2% (166,000 net growth)

Oddly enough, percentage growth slowed down after the introduction of code test waivers and the Tech lost its code test. The total net growth in the '90s was almost exactly the same as in the '80s, even though the US population was larger.

As a percentage of the total US population:

Year - US population/annual growth - US hams - % hams
1970: 203 million 270,000 0.133%
1980: 227 million 350,000 0.154%
1990: 249 million 514,000 0.206%
2000: 281 million 680,000 0.242%

US hams as a percentage of population increased 0.021% in the '70s, 0.052% in the '80s and 0.036% in the '90s. So the growth slowed down after the introduction of code test waivers and the Tech lost its code test.

.shtml
>
Cecil,

Thanks for posting this! A true policy issue.

Seems to me there are two threats to amateur radio here:

1) The new technology folks obviously want more VHF/UHF allocations, and ours are an obvious target. Some are protected by international treaty, but others are not.

2) Other new technology folks are bothered by Part 15 and Part 95 rules which limit their ability to radiate RF. The proposed "Power Line Communication" stuff is an example. These folks don't want allocations - they simply want to do things that will adversely impact others' use of the spectrum.

How do we fight these challenges?

You're taking us down a path which will seem familiar to those who have
encountered you here. You, young Mr. Vipul Shah, the square peg of
RRAP, will decide which educational material is worthless knowledge much
as you've decided which of the amateur radio licnensing requirements are
worthless.

> >Give us some examples of "worthless courses" you had to take and "worthwhile
> >knowledge" that was crowded out.
>
> Worthwhile knowledge was crowded out because there was no free time left after
> having to take the required courses.

> Some worthless courses I had to take: literature (just to meet requirement),
> biology, physics (not for electronics), linear algebra (very worthless), Pascal
> (should have had C class, no one uses Pascal), probability.

Those don't sound like worthless courses to me, Vipul. What makes you
so special?

> Examples of worthwhile courses missed: automechanics, popular culture- movies,
> music, sports, practical electronics projects.

Some of those sound like high schools subject. Automechanics is
normally something learned in vocational school. Most people learn
about popular culture from actually listening to music, viewing films
and reading books. Numerous universities offer such courses though.
There are any number of books crammed full of practical electronics
projects--no college course needed. Simply buy the book and read it.

> You gain more skills with worthwhile information than worthless information.

...and Vipu Shah is a special kind of guy, the kind of guy who'd like to
not take required courses which he finds "worthless".

> >What engineers need is to
> >learn how to think about engineering, and the skills to solve engineering

> >problems.
>

Education, as always. There is no other national communications
resource that can compare to the ARS, and of course its strong suit is our
emergency communications potential. When the infrastructure is clobbered or
falls short as it is prone to do in events which cause heavy demand, hams can and
do fill the gap. That alone is more than reason enough to maintain our
allocations to the extent necessary to keep that capability-though it certainly
doesn't mean we get to keep what we now have. That isn't likely, given the lighe
usage of some of those allocations and the building demand for additional
spectrum.

So how to effect that education, who is the target, and by what means do
we get them on our side? Looks like ARRL is the obvious avenue. They're working
on it now, but one gets the haunting feeling that the effort isn't what it should
and could be. Pres. Jim Haney is doing much more than any other pres in recent
memory, but other than that, the effort doesn't seem to be
too much more than press releases and lip service, if I read it correctly.
Maybe I've missed something? And how to get them on the ball and doing what
they're supposed to be doing?

I let my ARRL membership expire the last of April, and so far I haven't got around to renewing it, though I imagine I will. Sometimes the arrogance and we-know-it-all attitude emanating from Newington seems to exceed the positive aspects, but I know that certainly isn't all there is to it.

> (should have had C class, no one uses Pascal), probability.

Actually you missed the entire point of these classes. I will address the requirement of Pascal as an example. The point of that class was to teach you structured programming. The best language to do that in is Pascal as it is inherent in the language itself and you must structure your program to make it work. Once you learn good programming techniques such as structured programming, the techniques can be transfered to other programming languages even though the other languages don't require quite so much structure. Once you have learned PROGRAMMING, switching computer languages is no big deal.

If you had learned what was taught, you had a solid foundation upon which to build. There simply aren't enough hours for a college to teach a person everything. They teach a basic approach and from there it is up to you. Plus you need to keep building on the foundation the rest of your life. The school cannot do it for you.

For example, I was required to take FORTRAN as a programming language in school. Building on that, I later learned several programming languages long after I was out of college. These included Pascal, C, several variants of BASIC, QBASIC, and Visual Basic.

>
> Examples of worthwhile courses missed: automechanics, popular culture-
movies,
> music, sports, practical electronics projects.

Automechanics is a vocational school course not a college class. Since pop culture, movies, music, and sports have nothing to do with your EE major, why do you consider them worthwhile yet consider literature, biology, physics, etc worthless???

There is competition. There are many universities and colleges to choose
from. The requirements vary from one to another.

>Thanks for posting this! A true policy issue.

That Associated Press wire story by David Ho ran in most news-papers on 5 Jun 03. It had little substance to it, hardly more than a "filler" piece to anyone watching the US civil radio regulations.

>Seems to me there are two threats to amateur radio here:

The article had NO "threats to amateur radio" since amateur radio wasn't even mentioned. Only three specific user groups were cited: Cellular telephony, military radio, and public safety users (police, fire). The World Radio Conference beginning shortly in Geneva was briefly mentioned in the LA Times AP article printing.

>1) The new technology folks obviously want more VHF/UHF allocations, and ours
>are an obvious target. Some are protected by international treaty, but others
>are not.

Considerable bandspace has already been vacated by the military and the changeover to DTV from NTSC TV in TV BC channel reallotment. I would suggest perusing the FCC and ITU website before trying to be a Sumner editorialist.

The bandspace free-up has been on-going for about six years now. If you have compared the "international allocations" versus those of the US on UHF and higher, you will find that very few of the UHF and higher bands of the USA are "protected by any ITU treaty." See the BIG chart in Part 2, Title 47 CFR.

>2) Other new technology folks are bothered by Part 15 and Part 95 rules which
>limit their ability to radiate RF.

Only for consumer electronics products (not mentioned by Ho's article). There is considerably MORE of non-consumer electronics such as the Part 27 bands (which reach up to 5 GHz) and the UWB devices.

One out of three Americans are cellular telephone subscribers now
according to the US Census Bureau. That is roughly 100 MILLION
cell phone users...all using the EM spectrum in a small band
centered around 1 GHz. The cellular telephone has become an
almost indespensible part of American life.

>The proposed "Power Line Communication"
>stuff is an example.

Ho's article did not mention those things, didn't even touch on the
power distribution signalling and telemetry. Neither did Ho touch
on the (approximately) 5 different high-speed digital LAN systems
using existing electric power wiring ("PowerPlug" as an example).

>These folks don't want allocations - they simply want to
>do things that will adversely impact others' use of the spectrum.

"Those folks" argue their cases rather well according to the public
files of the FCC. The ARRL has not been as persuasive as in the
past on issues directly affecting US amateur radio.

There is NO "God-given" right to amateur radio allocations,
despite what many amateur purists insist. Sad to say for so
many hams, US amateur radio could cease right now and life in
the vast majority of the USA would continue on without any
impact from that cessation. Today the number of non-amateur
radio users far outnumber the amateur users of the spectrum.

Amateurs have no more "right" than any other radio user to the
spectrum, despite what many think. Once you understand that,
the overall regulatory picture is clearer. "Those folks" are not out
there "simply to do things affecting others' use of the spectrum"...
any more than amateurs are doing things to affect non-amateur
users.

>How do we fight these challenges?

You could begin by trying to be realistic about spectrum use.
It would benefit everyone to access public information sources
(the FCC web site as primary) other than ARRL web pages.
That is far more difficult than getting encapsulated snippets
doled out by ARRL as it sees fit to publish. Your choice.

One way to begin being realistic is to understand that there has
already been a great deal of EM spectrum re-allocation going on
for half a decade in the USA. It's been public knowledge for all
that time...but few bother to check it out. There are more potential
spectrum users out there, wanting a chunk of the spectrum for
their services. Those services are likely to affect far more
American civilians' radio use than amateurs playing in ham bands..

Unlicensed Low-power FM broadcasting is growing by leaps and bounds. Equipment is being sold at hamfests across the country, and one can hear discussions about the subject on VHF ham radio. Web sites which provide technical advice and technical discussions are also growing in numbers with new web sites coming on line all the time. Equipment can be purchased via the internet at hundreds of web sites. Owners and operators of such stations are being interviewed by newspapers and other media. Public demand and support for this type of operation is growing by quantum leaps. Unlicensed LPFM is not only here to stay but is growing at an unprecedented rate.

It's a very nasty place to get stuck, lost or messed up, ya can die
fast and ugly in their WX. An all-inclusive net makes sense where pole
lines and roads are few and far between. I keep trying to imagine what
a freq like 5167.5 would sound like in Southern California.

I remember reading an article somewhere a long time ago about the
outback VKs having a similar network. All their ranches were equipped
with HF stations and nearest civil authorities monitored the freqs.
Ranch hands carried horseback portables when they were camped in the
boondocks tending the herds. John Wayne with a reddio and a
Winchester. The Outbackers also took it to another level and used
their HF equipment for conducting on-the-air interactive three Rs
classes for the kids. As opposed to 200 mile one-way trips in yellow
buses, etc. Probably resulted in a lotta eight year old kids who were
a bit shaky academically but were pretty decent radio ops.

Yer right. When I was a CAP op we used Gonset Communicators on a freq
just above 148.0 mHz and a mix of USAF castoffs & ham gear on HF. Been
awhile but as I recall our sqdn. HF base station consisted of an xtal
controlled Johnson Viking and a USAF BC-348 type rcvr.

It seems more people are willing to take the risk in running an "illegal" transmitter nowdays, but for those who are still shy on the idea, there was once a discussion somewhere regarding a "two channel, repeater approach" to micropower broadcasting for those who fear FCC punishment.

One transmitter originates the programming, then is picked up and retransmitted on a second frequency, and this is repeated infinitely across the vicinity until all nulls and gaps are covered by both frequencies. The repeaters would simply be something like an inexpensive digital radio feeding an inexpensive transmitter. The whole works could be built into a watertight ammo can and could be totally self contained. All it would need is a little tweaking and a fresh battery now and then. If I'm not mistaken, this is being tried in a couple areas already.

It certainly can't compare in terms of quality to a single transmitter covering the entire area at a higher power, but it *would* work if someone does not want to risk running a large TX fron their home. It would be a multipath nightmare, but it would work to "bend the rules" and have a larger coverage area "legally".

It would, however, require the cooperation of others in the community as far as locating transmitters is concerned.

Of course, it would be much easier (and certainly preferable) to simply build a link and run a larger TX at a different location.

>RRAP, will decide which educational material is worthless

Traditional education is fine for you. I won't allow it for my children. I will look into homeschooling and charter schools.

Even charter schools don't go far enough. Also, homeschoolers still have to meet minimum SAT or MCAS scores. This is unfair to those that don't believe in those things.

>much
>as you've decided which of the amateur radio licensing requirements are
>worthless.

Yes, code is worthless.

>Those don't sound like worthless courses to me, Vipul.

I never used them again in EE or anywhere else. If those classes were cut, I would still "learn how to think" in the remaining classes. More so, if the subject matter <and methods> are useful.

>What makes you
>so special?

I want quality education.

>...and Vipu Shah is a special kind of guy, the kind of guy who'd like to
>not take required courses which he finds "worthless".

Education is expensive, and time consuming.

>> This affects any course, whether you take an economics course or an EE
>course.
>> (Less true of EE courses, but still true).
>
>I can envision you as an Econ student, demanding to tinker with Federal
>Reserve Bank policy issues.

There should be enough course offerings to take quality courses and not be stuck with lower quality courses. Also, courses should be evaluated on their usefulness.

Also, allow private educational companies to offer courses that compete with schools and offer credit for them. The same college credit you would get from your college. Most people take required non-major courses for credits. However, if <requirement meeting> course was offered, but with practical applications

and non-traditional methods (not just sitting at a desk), many would chose to learn something.

>Sorry, Vipul, you didn't really "show" anything. You merely led us
>through the maze that is your thinking process.

Its the total person. A person that can recite Shakespeare, but cannot change a flat tire is less useful than the reverse. Tires do not listen to Shakespeare.

I once took an expensive camping "course". The person taught several types of knots. But, he did not tie anything with those knots! Not even a tent. Also, It was more a lecture format, than actually doing something. One learns more by building something.

Also, they tried to cover many <unrelated> topics. It is better to do a small focus skill well, than just introduce to many areas and not do any of them well.

I did not learn anything. I still don't remember those knots.

Just a month ago, I went on a camping DXpedition with a random group of Hams. It was not expensive and I learned alot more.

There was a real purpose and theme of the whole event. The theme of the event was operating and contesting on several radio modes. It had a definite sequence of activities, from setup of antennas to takedown.

That's the difference between worthless skills and worthwhile experiences.

>> I need to find quality homeschooling.
>
>Might I suggest looking in someone else's home?

It takes a village...

>I guess your kids will come up short when it comes time to enter a
>university. They likely will not be accepted.

No, not at all. I've heard of another (not me) that made the case that they could learn something and that person was allowed to take a year off and make up the grade later. That person got accepted into a <great> college.

Okay, the person still had to make up the class. But, the point is there are still ways to fit the useful courses in. I will have to look at homeschool, charter school, making up grades (like that person did), and other options.

Also, if there is a need, I will hire a lawyer.

>There simply aren't enough hours for a college to teach a person
>everything. They teach a basic approach and from there it is up to you.

The basic approach is sitting at a desk. This method will not cover the
required material, regardless of what subject is taught. If gave an example of
the camping course I took.

> Since pop
>culture, movies, music, and sports have nothing to do with your EE major,
>why do you consider them worthwhile

Because these skills are useful.

yet consider literature, biology,
>physics, etc worthless???

Because I can't use this knowledge anywhere.

>There is competition. There are many universities and colleges to choose
>from. The requirements vary from one to another.

All teach traditional education. Therefore, no competition.

I am not an EE now. Isn't that enough for you? Why do you keep saying that I was not an EE before?

>No LEGITIMATE business in the United States deals in
>"unrecorded" cash.

Its a legitimate business.

It becomes unrecorded when the employee gives items or service and accepts cash, and does not report it to the employer.

>>Many would be tempted to take some, believing it
>>would not get noticed. ANYone would steal in this type of job.
>
> Anyone with any amount of self respect would stay there any longer than
>to
>find out what's going on then get out.

If someone takes something off the shelf, it is likely to get noticed. Not reporting cash and hiding transactions is more effective.

Its also challenging because there are many ways to hide transactions. One way is they could charge the customer more, and record a lower amount, and keep the difference.

Alot of cash is handled daily. And the employees don't make much. I believe anyone would steal under this situation. Suppliers steal also. Therefore, steps should be taken to minimize this.

The current manager warned me that this is a risky job. My pay will be tied to how well I keep track of and control the transactions.

Thats not my only job duties, of course. I have to serve customers also. Its not a glamorous job. However, one does not get this job without the right connections, which I luckily had. I will accept it because what it is paying (if less money lost) is well worth the risk.

2239. Re: Solar Storms - CW Still Gets Through

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-08 16:37:55 UTC
From: vshah101@aol.com
Message-ID: <20030608123755.22953.00001003@mb-m13.aol.com>
Source record: 68388

Here's what a Morser may experience:

I must admit, CW was a guilty pleasure - until recently. CW filled my empty soul. It seemed so easy. Learn a skill - gain instant admiration. It gave me purpose, a goal, an ideal. It allowed me to reverse, where in the rest of society, I did not accomplish. Societal inversion. Social distortion. And all supported by a widely recognized amateur radio license structure. You see, to advance to the next license class, one must learn this Morse code skill. It allowed me to feel superior to others that did not learn this skill.

It was a source of pride, having this skill.

Then it went bad. I became obsessed about increasing my speed. I started to feel great highs and lows. Every source of animal flesh was devoured. I jogged - believing it would increase my CW skill. The spouse was avoided. I became anti-social. I became confrontational.

And this skill was important to society, I told myself.

I imagined a secret society of people that could instantly translate real-time Morse code transmissions. A select group of individuals from all professions would have the common bond of real time Morse code recognition. Secret meetings would be held to discuss issues relating to this activity. Those that did not have this ability would be eliminated.

I know that, like riding a bicycle, once one learns CW, one cannot forget it.

Then, it happened. Like a wolf, which can hear the faintest sound, I had the ability to instantly translate Morse code. Everything began to look like CW. I saw road signs. I instantly translated it. At first this was fun, then it was annoying. Now a curse - it occupies me constantly. I needed an "exorcism".

I seeked relief from this pain.

Luckily, I am recovering. I saw my spouse, still understanding. Then, I realized what's important. Now, I feel freer than ever. Able to enjoy life. The sun is shining. The air is fresh. It's a brand new day.

>>Hey folks.
>>Armstrong gave up and jumped; Look it up.
>
> The main reason leading to Armstrong's depression and suicide was
> his pal, David Sarnoff, stealing his patents.

Sorry, but there is a great deal missing in that claim.

In 1920 Armstrong sold rights to two of his patents to Westinghouse for $335,000. He traded rights to the superregenerative receiver for a big block of (then new) RCA Corporation stock. Leaving the US Army with rank of Major and the recipient of the French Legion of Honor, Armstrong wasn't exactly a pauper then.

Armstrong was emeshed in a big patent fight with Lee deForest from 1922 to 1934, eventually leading to a Supreme Court case (Armstrong lost). Both Westinghouse and RCA Corporation were on Armstrong's side. Professional associations didn't go along with the federal courts and honored Armstrong for his achievements (he was the first recipient of IRE's medal).

From 1934 on to 1940 Armstrong was involved in several different patent fights with others, even while developing wideband FM broadcasting. The FM quality was not yet recognized due to an unfortunate early supposition of technical quality from some AT&T types thinking that it would not be static free (they hadn't thought about the limiter effect enough).

1940 FCC decision to move FM broadcasting up from the 40 MHz region to its present band was a financial burden to Armstrong's fledgling BC organization. Armstrong had funded most of that development with his own money.

Various patent suits continued on into the post-WW2 period. Ed's wife got tired of all that court battling and left him. That and some physical illnesses left Armstrong very depressed. He suicided on January 31, 1954.

> Had he waited, he would have been vindicated when Sarnoff/RCA was
> found liable for same shortly after and was ordered to pay
> Armstrong's estate a sizeable sum.

In actuality, Armstrong's widow eventually won no less that 21 patent infrigement suits against as many corporations and won about $10 million total restitution.

Continuing to portray RCA Corporation and David Sarnoff in a bad light is incorrect. RCA had backed Armstrong in pre-WW2 suits and Armstrong continued to earn dividends from RCA stock.

If it is any consolation, remember that Sarnoff was a morseman and that RCA Corporation was a creation from part of General Electric...the same corporation that bought RCA in the 1980s. :-)

>is inherent in the language itself and you must structure your program to
>make it work.

Sorry, but that "structuring" is no more inherent to Pascal (or Ada) than
with any other computer programming language, high level to assembler.

"Structuring" and "structured programming" are just buzzwords. What
they originally meant was LOGICAL construction of statements in the
program but some PR-oriented gurus embraced it as a talisman word
in promoting some computer languages over others.

>Once you learn good programming techniques such as structured
>programming, the techniques can be transfered to other programming languages
>even though the other languages don't require quite so much structure.

ALL computer programs require a logical structure. ALL. There are
no exceptions. It was so since the first computer language and
continues today.

>Once
>you have learned PROGRAMMING, switching computer languages is no big deal.

Rubbish. All of the higher-level computer programs have differing
syntax and statement structures. Compare them all and you will
NOT find anything common to them except for the need in all to be
logical in structure.

>If you had learned what was taught, you had a solid foundation upon which to
>build. There simply aren't enough hours for a college to teach a person
>everything. They teach a basic approach and from there it is up to you.

That is often viewed as an academician's cop-out, a rationale to explain their importance in the scheme of things.

The "solid foundation" is another buzzword used by colleges and universities. Those haven't figured out if they are a basic training camp or some kind of institute of higher learning...they can't be both.

The closest approach to "a solid foundation" is mathematics as applied to electronics technology. Electronics (radio is a subset of that) requires mathematics to apply exact component values for a circuit or system...and to explain operation of same. A thorough basic mathematics knowledge is necessary from algebra and simple trigonometry...but higher-level mathematics is less useful in inverse proportion to level.

The thing about higher-level math is that it makes the paper writer look so absolutely Learned and Knowledgeable. Lots of high-level math may look absolutely wizard on paper but it is seldom useful in explaining the purpose of a paper on some subject...except perhaps as a scientific sort of phenomenon explanation that seldom has any practical explanation. The Appearance of a paper is far too often taken as the criteria rather than the subject itself. Image is all.

One of the worst, illogical, badly-structured statements is that "learning a foreign language teaches one the proper skills for English." That's one of the worst rationales in academia and totally impractical in the real world. One learns a foreign language in order to be skilled in that language, not English. One learns English in order to be skilled in English, not some other language.

>Plus you need to keep building on the foundation the rest of your life. The
>school cannot do it for you.

Corporate personnel departments are unable to reference "the rest of anyone's life" but they will readily accept graduation certificates as proof of having learned something. Personnel personnel ("human resources specialists") are almost universally deficient in grading anyone's life experience up to the point of the initial interview, thus the need for all those academic certificates showing "proof."

That's one of the reasons for the FINAL decision interviewing done by corporate departments' department personnel (the ones who do the real work). They know what is required and lots of fancy certification isn't always the criterion for performance in the corporation.

>For example, I was required to take FORTRAN as a programming language in
>school. Building on that, I later learned several programming languages
>long after I was out of college. These included Pascal, C, several variants
>of BASIC, QBASIC, and Visual Basic.

I've never taken any programming languages in formal college classes. I didn't know that such were so necessary so I just bought Dan McCracken's softcover book explaining Fortran IV programming. In

less than three months of off-work self-study I could write working programs. It helped to have some background experience in the logical statement writing of programs for the HP 9100 calculator, that not requiring any formal classroom training either.

All of the Basics are subsets-modifications of Fortran, a language that applies well to iterative formula calculation. If one needs calculation of numbers, Fortran (or FORTRAN for programming purists) is the easiest to use since it "speaks" in formulas.

Pascal was originally the "odd man out" in a different syntactical set and attempt at "universality" of program languages. Its' proponents were probably intimidated by mathematical formulas, therefore they nay-sayed the formula-oriented languages. Cobol is apparently despised since it is oriented towards business purposes (therefore not "pure") and has simpler mathematical formula statements. Pascal morphed into C and the first C evolved into C++. Syntax of C++ is almost incomprehensible to Fortran writers, not at all the alleged "ease" of transference from formulas to universally-structured top-down whatsis buzzwords of C writing.

>Automechanics is a vocational school course not a college class.

Impure! Impure! How dare anyone equate a Vocational course to the college level! :-)

Good grief...talk about academic-intellectual snobbery! :-)

Any good hands-on EE needs some vocational (hack, ptui) skills to be able to work in the lab and in the field. Electrons, fields and waves don't give diddly on someone's certificates or rankings in the academic or personnel world.

Electrons, fields and waves don't care squat about political science courses, history of the country, foreign language learning, or achieving top-ten in grades or classroom work. They work by their own physics laws. Obey those and you can make them work for you.

Of course, morse code skills are on the vocational level, aren't they? :-)

You have to take the personal responsibility to get off your behind and
practice applying it. It's up to you to build upon what you are taught.
Nobody is going to take you by the hand and spoon feed an education.

> > Since pop
> >culture, movies, music, and sports have nothing to do with your EE major,
> >why do you consider them worthwhile
>
> Because these skills are useful.

Nope. They are not "useful". Pop culture changes at such a fast pace, that
it is pointless to study it. What use is there in studying movies? They do
not contribute to the skills you need in any facet of your daily life. Same
with music and sports. Unless you go into one of these fields to make your
living, they are all useless. However they are all enriching and if a
person is interested, they are worth studying for that reason alone.

>
> yet consider literature, biology,
> >physics, etc worthless???
>
> Because I can't use this knowledge anywhere.
>

Studying literature is just as useful or useless as studying music or
movies. Actually it is more useful as it makes studying English much more
pleasant. And in this country it certainly helps to be proficient at
English.

Having an understanding of biology and physics will prevent you from
sounding like an idiot in discussions with other people. Such subjects do
come up among educated people from time to time especially when an
interesting news article comes along to spark the discussion. That alone

makes them worthwhile.

> >There is competition. There are many universities and colleges to choose
> >from. The requirements vary from one to another.
>
> All teach traditional education. Therefore, no competition.

Well obviously there is not a sufficient market for alternative forms of education. In this country, if there's a market, someone will produce the product. Again, if you think the traditional is insufficient, there is NOTHING but yourself stopping you from filling in the gaps on your own.

All the time, Dee.

What our good Mr. Shah does not realize is that nothing occurs in a
vacuum. A person that assumes they "know" what portions of their
education are worthwhile, and what parts are not, and is willing to
forgo those parts they declare useless, is showing a strange combination
of ignorance and hubris.

I use bits and pieces of my whole education all the time.

But then again, we are talking about a person who will help hams put up
an antenna, but not take it down because he does not "learn as much"
doing that.

Well, unlocking any of the amateur spectrum that is actually used by hams would be somewhat counterproductive.

It just wouldn't work.

Say the 20m band was given or sold to a private company. With thousands of antennas and transceivers already set up to transmit in the new Corporate frequency, there would be so many pirate transmissions by the former users as to render the band useless to the new owners. Also, the rest of the world would not necessarily follow W, thus I think all of the HF bands are frozen in the amateur domain. VHF may or may not be useable by a buyer, depending upon the amount the amateur hardware in the field. I wouldn't give UPS much of a chance on actually using 144-148MHz, no matter how much they paid for it. 220MHz? Obviously not a problem because it was not used. If amateurs would actually use the allocations and make or purchase hardware for it, the more unattractive it would become to prospective buyers. And selling 27MHz or anything near the CB allocation would be similar to selling the Brooklyn bridge or ocean front property in Nevada. We shouldn't worry so much; we should just use our allocations and forget it about this 'threat that I have heard ever since becoming a ham 10 years ago.

Phil,

Hummmm. If you can not transmit CW and its not a Amatuer Band,
could the FCC allow Tech to operate on the band?

What was the FCC reasoning for the allocation?

Will five channel enable a significate amount increase
communications to make this worth the effort?

Larry, KC8EPO

The useful subjects occur frequently, while the not so useful course subjects rarely occur. Its foolish to do exercises for the infrequently occuring subjects, when the frequently needed knowledge is unlearned.

>I use bits and pieces of my whole education all the time.

Good for you. I tried to pay someone using traveller's checks and the person did not know that I could do that. This person must have went to school. Yet this person did not know how to accept my payment.

I'm sure that flat tire got fixed when you recited Shakepeare to it or calculated Fourier Transforms.

I agree with everything you said here. You seem to understand and agree what I was saying about traditional education and you explained it very well.

>>Actually you missed the entire point of these classes. I will address the
>>requirement of Pascal as an example. The point of that class was to teach
>>you structured programming.

>Rubbish. All of the higher-level computer programs have differing
> syntax and statement structures. Compare them all and you will
> NOT find anything common to them except for the need in all to be
> logical in structure.

Pascal was already out of use at that time and C was in use. The university could have taught C, they just didn't. They were wrong in doing that. It makes no sense to study Pascal when companies ask for C.

>They teach a basic approach and from there it is up to you.
>
> That is often viewed as an academician's cop-out, a rationale to
> explain their importance in the scheme of things.

Yes, its a way for them to explain why they didn't teach you anything useful. They say they are just teaching the basic approach. Unfortunately, most people do not examine the educational system and believe this nonsense. Instead, they should be asking for higher quality.

>Those haven't figured out if they are a basic training
> camp or some kind of institute of higher learning...they can't be both.

They say they teach, they don't train. Its just another excuse not to provide the useful skills in that particular subject.

> Personnel personnel ("human
> resources specialists") are almost universally deficient in grading
> anyone's life experience up to the point of the initial interview, thus
> the need for all those academic certificates showing "proof."

Thats another issue, but I agree with you on that also.

>They know what is required and lots of fancy
> certification isn't always the criterion for performance in the
> corporation.

The person that has built projects in a subject, is much better than the person that simply took a course because it was required for EE.

>>Automechanics is a vocational school course not a college class.
>
> Impure! Impure! How dare anyone equate a Vocational course
> to the college level! :-)

You are right. Its about image, more than learning useful skills.

This reminds me of a Simpsons episode where Homer is telling Marge
that his head is so full of knowledge that every time he learns
something new, something he learned earlier was pushed out of memory,
leading to:

Homer: "Remember when I got that winemaking kit, Marge? I learned how
to do that, and forgot how to drive a car!"

Marge: Oh, Homer, you were just drunk!"

Homer: "Annnd How!"

It is very strange that you seem to subscribe to a model where a person
"unlearns" things. Do you have any citations in the literature of this?

I meet idiots all the time. I don't translate their idiocy to the
education system.

Remember, half of the people in the world are below average.

> I'm sure that flat tire got fixed when you recited Shakepeare to it or
> calculated Fourier Transforms.

I can fix a flat. I can rebuild an engine. I can also hold a
conversation in quantum physics (at a lay level of course) while I'm
doing it. Its a big interesting world out there. Too bad you want to
limit your knowledge to just what you think is relevant at the moment.

>> This proves my point further. Traditional education assumes that everything
>> occurs in a vacuum.
>
> Huh? make yourself clear.

It assumes the only consequence of a subject is the quantifyable facts in the subject matter. The total path in practicing that subject matter is ignored. In some cases this part has a bigger impact.

Like the example of studying many kinds of knots, the history of knots, people's opinions of knots, and writing an essay on knots vs the person who used a knot as part of putting a tent up. The person who put up the tent learned alot more.

> Homer: "Remember when I got that winemaking kit, Marge? I learned how
>to do that, and forgot how to drive a car!"
>

My example is different. In my example, the person would never get a chance to use the winemaking kit so he didn't learn that at all.

>It is very strange that you seem to subscribe to a model where a person
>"unlearns" things. Do you have any citations in the literature of this?

I never said one unlearns things. I said the person never gets a chance to learn the useful skills.

>education system.

They were unable to do that because they were not taught that in school.

>Too bad you want to
>limit your knowledge to just what you think is relevant at the moment.

I don't want to learn something that I know is of no use to me.

On an international basis it's not a ham band, but domestically the FCC is allowing ham operation on those channels. Until and unless the international requirements for a code test are lifted, it's a safe bet that non-code-exam hams won't be allowed there. It's a Catch-22 situation.

>What was the FCC reasoning for the allocation?

It was requested as an "intermediate band" between 80/75 meters and 40 meters. It would have been a wider (150 kHz) allocation without channelization except that the NTIA - the "landlord" of that portion of the spectrum - disagreed, hence the detailed restricted operation.

>Will five channel enable a significate amount increase communications
>to make this worth the effort?

Personal opinion - I doubt it. I would be happy if I were proved wrong, though.

I've fixed flats, including the old inner tube tire type. So what?
I've never had to rebuild any engine but I did keep up most of
the maintenance on my '53 Austin-Healey sports car. So what?

I've hob-nobbed with physicists but none of them conversed in
or about quantum mechanics socially. :-)

I've also been out in the big interesting world and half a century
ago actually operated HF communications...lots of it and none of
it using morse code modes. But...lots of the already-licensed
INSIST on keeping that code test for amateur radio a half century
later. You are welcome to explain the WHY of such "learned folk"
insisting on that code test...but I don't think you can bring up any
new arguments for keeping it. :-)

While it doesn't have anything to do with amateur radio...but might
be about rather amateurish vaudeville performers from off-shore, the
character name was written as "Senior Wences" but was pronounced
with an S instead of a C.

Anyone working for a CBS affiliate would remember that and the still-
used "eye" logo. Always be ready to "take network" at one second
after the hour (or half-hour)...if the station wanted to get paid... :-)

> See the BIG chart in Part 2, Title 47 CFR.

And we've already suffered the "bandspace free-up" in recent years.

ANY announcement of reconsideration of frequency allocations affects
Amateur Radio...Maybe not today, but certainly tomorrow.

Thankfully those of us with more than an inkling of the goings-on of
current radio politics know that this one article does not represent ALL
current spectrum use matters.

>Amateurs have no more "right" than any other radio user to the

"We", however have more "right" to it by reason of licensure than YOU do,
Lennie, and that's enough for me.

Go back to wherever it was you were, Your Scumminess.

Larry,

1. Re-read the line where it says "similar wish as to intention." It does not state that this person wished for IDENTICAL action to the no-coders. Again, similar does not equal exact.

2. If the line stated "Seems like I remember Larry Roll offering....." instead of the word "someone" I would be more than happy to offer an apology. How do you know I was or was not referring to you? Guilty conscience??? How do you know I wasn't referring to another person here????

Quite simply put..... USE THE BAND OR LOSE THEM!!!!!!!!!!

2 meters is typically popularly used, but in some areas is quiet except for certain times like morning and evening drive time. 70 cm is (in my area at least) used a little bit for repeater use, but otherwise quiet. At least gear for these bands are widely available..... just wish they would make all mode 2 meter rigs and allmode 70cm rigs!!!!!

Six could start to be utilized more on a local basis if hams started to use it more. I have found that my case, mobile operation, that using SSB I have had local range use of 30-70 miles radius of my location. FM on six gets anywhere from around 10-30 miles local use (simplex) This is my personal experience. It seems like we still could use that band a little more than just during band openings. I see ham's usage of six meters akin to only caring for your kids when they are good, and totally disowning them when they are bad!

As far as 220, 902 and 1.2Ghz allocations, if there were more gear available, at a reasonable price from our bigger manufacturers (Kenwood, Icom, Yaesu, Alinco etc.) may be we would hear more on these bands. I would also like to see them make more all-mode gear for those bands, (or at least SSB) for some of the different digital modes. PSK would be cool to use on 6m, 2m, and 70cm as an alternative to packet. In fact I can see some merit in using PSK over packet in those bands for public service/emergency comms!

If we as a whole don't start using the bands.... we are gonna lose them. And I probably will be the first to say, "I told ya so!"

Phil,

I realize that the FCC will not change the 5mhz allocation at this point.
But could they allow Techs to operate, and not violate the ITU treaty?

And, if they did violate the treaty, what would be ITU's recourse?

If the Morse code require were determined to be unnecessary,
not in conformity with 5 USC 706, and ITU rule S25.5 remained
after WRC 2003, how would you think the court should decide
when presented with the question of no-code operation on
amateur HF bands?

Or, what are the limitation of ITU rule into the domestic
FCC rules? Your comments about some of the legal battles
between US AM broadcast stations was very interesting.
What happens when one station is in Canada, and the other is in
the USA. Probably take 100 years to resolve.

Fine, so let's see international broadcasters interloping on the ham
bands.

A treaty is an agreement, likely based on some tradeoffs. We'll do
this, and you won't do that.

I have no idea about how ITU could enforce things, but the minute someone
decides that the rules don't count for them, then it just makes it easier
for someone else to see the same thing. You seem to think this doesn't
matter since it's a minor thing (I'd question why it's so important
for people who haven't passed the code test to use this puny, other
than because someone sees a false loophole), but it is the very adherance
to the treaty agreements that keep things in line. If nobody sees
the point in honoring a treaty, then it all falls apart like a house
of cards. And likely other countries, if they followed suit, would
break the treaty on far bigger issues, that will impact far greater
than this puny issue.

If the student only plans on taking the test, passing it, and moving on
to the next class, you are kind of right. Thing is, the student is given
the material, and tehn must put in some effort thinking and applying it
to life.

But this is a student failure, not an educational system failure.

But the study of knots is just as important. And the history of knots
can illustrate the type of knots you *don't* want to tie.

You posted:

<Vipul> The useful subjects occur frequently, while the not so useful
course subjects
<Vipul>rarely occur. Its foolish to do exercises for the infrequently
occuring
<Vipul>subjects, when the frequently needed knowledge is unlearned.

>>I meet idiots all the time. I don't translate their idiocy to the
>>education system.
>
>
> They were unable to do that because they were not taught that in school.

Uh huh, The poor student isn't being taught properly by the evil,
stupid teacher. Well then, why doesn't the poor student go find someone
who can teach them then?

The student-teacher compact is about 25 % teacher, and 75% student.
While a poor teacher can have a negative inpact on the student, that
does not matter. The onus IS on the Student.

Because the fact is that the teacher is just a facilitator, giving out
the knowledge. They can't force the student to learn. All they can do is
present it, and to help explain it to the student.

And the student that does not learn then blames it on the teacher?

Let's take you for instance. Many here have taken issue with your ideas
about education. I see them laying out a rational, logical argument, as
compared to your "just so" posts. Now, consider us the teachers, and
yourself as a student. You are discarding everything we have to say on
the subject, and refusing to learn anything from it. You take an active
part in this refusal, as you talk about useless courses and material.

>>Too bad you want to
>>limit your knowledge to just what you think is relevant at the moment.
>
>
> I don't want to learn something that I know is of no use to me.

Many adolescents share the same feelings, Vipul. That is because they
are adolescents, and do not have enough life experience to realize that
what may not be of any use now, might be a real lifesaver later.

Are you an adolescent? And what is better, to learn something that you
may never use, or to miss learning something that becomes of critical
importance just because at one time, you KNEW it was of no usful purpose?

Of course, you can increase the range of a part-15 device without breaking the law. All you need to do is to put a better antenna on. The right kind of directional antenna can greatly increase your range, without breaking the law.
In the 1990s, I hooked about 50 feet on antenna wire to my SoundFeeder SF-120 and was about to increase the range from 20 feet to nearly a mile, which was legal, becuase I only modified the antenna and not the innards of the SF-120

Since WRC 2003 is likly to dump s25.5 in a few days, this is moot. It's a
pity a 60m band is not on the WRC agenda.

Amateur Radio Newsline™ Report 1347 – June 6, 2003

Amateur Radio Newsline report number 1347 with a release date of Friday, June 6th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

HIPPA affects ham radio and update on a harmonized 40 meter band. These stories and more on Amateur Radio Newsline report number 1347 coming your way right now.

(Billboard Cart Here)

**

FEDERAL LAW VS. HAM RADIO: THE CONFUSION OVER HIPPA

A new federal healthier law with the acronym HIPPA is affecting Amateur Radio. Bruce Tennant, K6PZW, takes a look at the recent implementation of the Health Insurance Portability and Accountability Act and its impact on the hobby.

--

If you are a ham with a disability and are a member of a group any other organization that has knowlege of your problem, then listen up. In order to continue receiving most benefits from such a group you are now required under Federal law to fill out and return the new Health Insurance Portability and Accountability Act privacy guidelines forms that you may have already recieved or will recieved from each group.

Its the Federal government that requires the paperwork, and signing it will allow groups that must disclose disability information in the course of routine business to continue to serve you. For hams with disabilities it means that groups like the Handi Hams can continue to provided direct assistance with license renewal or license changes, publish news of individual license upgrades, and even send a birthday greeting by the ham radio's National Traffic System.

What about individuals who do not sign the forms? They will still be able to receive some services offered by these groups, but limited to those which do not involve releasing information about their physical condition. However, in the case of the Handi Hams, a disabled ham could no longer be connected with the groups assistance community of other members and volunteers because of the new federal privacy regulations.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

Full information on the Health Insurance Portability and Accountability Act is on-line at http://aspe.hhs.gov/admnsimp/ (Tnx HandiHams, others)

**

INTERNATIONAL: 40 METER CHANGE LOOKS GOOD

ARRL Executive Vice President Dave Sumner, K1ZZ, says that prospects for a harmonized worldwide 40 meter ham band are starting to look good. Speaking at a recent Dayton Hamvention forum, Sumner says it may all hang on what the United States proposes for the upcoming World Radio Communications conference later this year:

--

Sumner Here

--

Even if a large number of delegations come up with similar proposals, Sumner says that caution is still the by-word until all the voting has been done:

--
Sumner Here
--

You can hear more of what Dave Sumner has to say regarding 40 meters and other issues on this weeks RAIN report. Its in streaming audio at www.rainreport.com. Those without web access can her it by dialing up 847-827-RAIN. Thats 847-827-7246 (RAIN, ARNewsline™)

**

HAM SPECTRUM: 5 MHZ SPOT FREQUENCIES AVAILABLE MIDNIGHT JULY 3

LOOKING FOR SOMETHING NEW IN HAM RADIO? WELL, HERE'S NEWS JUST IN FROM THE FCC AND THE ARRL. I'M ROY NEAL, K6DUE, WITH A LATE BREAKING STORY THAT HAMS HAVE BEEN WAITING A LONG TIME TO HEAR. 60 METERS. 5 MEGAHERTZ …SOON WILL BE AVAILABLE WITH

5 CHANNELS FOR YOUR PLEASURE AND INVESTIGATION. A SECONDARY FIVE CHANNEL DOMESTIC HAM RADIO ALLOCATION WILL BECOME AVAILABLE STARTING AT MIDNIGHT, THURSDAY THE THIRD OF JULY.

FEDERAL GOVERNMENT USERS ARE PRIMARY IN THE 5 MHZ BAND. AMATEURS GET FIVE CHANNELS, 2.8 KHZ WIDE, WITH CENTER FREQUENCIES OF 5332, 5348, 5368, 5373, AND 5405 KILOHERTZ.

GENERAL AND HIGHER CLASS LICENSE HOLDERS WILL BE PERMITTED TO OPERATE UPPER SIDEBAND PHONE, WITH A MAXIMUM OF 50 WATTS EFFECTIVE RADIATED POWER.

USERS ARE BEING ADVISED TO SET THEIR CARRIER FREQUENCY ONE AND A HALF KILOHERTZ LOWER THAN THE CHANNEL CENTER FREQUENCY. THE ARRL ALSO SUGGESTS RESTRICTING AUDIO BANDWIDTH TO 200 HERTZ ON THE LOW SIDE AND 2800 HERTZ ON THE HIGH END TO KEEP THE TOTAL BANDWIDTH WITHIN THE 2.8 KHZ IMPOSED BY THE FCC.

THE REPORT AND ORDER GRANTING THE NEW SPOT FREQUENCY ALLOCATION AT 5 MEGS WAS PUBLISHED IN THE FEDERAL REGISTER ON JUNE THIRD. LOOK FOR LOTS MORE ON THE SUBJECT IN THE NEAR FUTURE HERE ON THE AMATEUR RADIO NEWSLINE.

NORM. (ARRL, FCC)

**

INTERNATIONAL - SOLOMON ISLANDS: LICENSING CONFUSION

Meantime, in the Southern Hemisphere, some questions and some possible answers regarding the confused state of ham radio licensing in the Solomon Islands. Q-News Graham Kemp, VK4BB, has the details:

--

Sam Voron, VK2BVS, spoke to QNEWS from an Internet kiosk at Dubai airport. Sam was en route to Somalia, but paused just long enough to answer a few rumors regarding the Solomon Island H44 prefix licenses.

According to Voron, there had been no way for people to get a license in the Solomons because there are no exams there. So in 2002 the H44 national radio regulatory body called Spectrum printed 21 novice licenses with the call signs chosen by students at a radio school. These are people took the Unrestricted level license class of ham radio training.

But Spectrum said that it first wanted to issue Novice licenses because it felt new operators should start with an entry level ticket before moving on to a full license. But Voron admits that at least two of these licenses may have been issued with Unrestricted privileges.

According to Voron, the Secretary of the H44 national ham society has now drawn up an Unrestricted exam. Students not happy being forced into the novice license when they spent 6 months studying for the Unrestricted will be able to take the exam. If they pass, they will go directly to the Unrestricted instead of the Novice class operating privileges.

In further news just in and unsubstianted as yet, the real exam is ready. Spectrum has directed the candidates to sit for it. The school and candidates are said to be dealying because they are frightened that it may be to hard.

For the Amateur Radio Newsline, I’m Graham Kemp, VK4BB, of Q-News, down-under, in Brisbane, Australia.

--

No matter when that first upgrade test is held, it appears as if a method is at least now in place for native born Solomon Islanders to take an Amateur Radio exam. (Q-News)

FCC: KILLS RULES FOR LIGHTING DEVICE EMISSION LIMITS AT 2400-2500 MHZ

Remember a few years back when hams became very worried about degradation to the 2 point 4 Gigahertz band? This, after the FCC adopted a First Report and Order that relaxed the emission limits for R F lighting devices.

That was on June 9th of 1999 and at that time the Commission deferred to a future date action on changes to the rules to permit such devices to operate from 2400 to 2500 MHZ.

Now, with no apparent remaining interest by the lighting industry to produce RF lighting devices in that spectrum, the FCC has decided to forego any further rule change. Well, at least for the moment it has.

The whole story is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-123A1.doc on the World Wide Web. (CGC)

**

RADIO LAW: FCC ACTS TO EASE MEDIA OWNERSHIP RESTRICTIONS

Federal regulators have acted to relax rules that restrict media ownership. The change will permit companies to buy more broadcast properties and own a newspaper as well as a radio or television station in the same city.

On Monday, June 2nd the Federal Communications Commission announced that it voted 3 to 2 to adopt a series of changes favored by media companies. It now says that a single company can now own TV stations that reach 45 percent of United States households instead of the previous 35 percent limit. The agency also eased rules governing local TV ownership so one media conglomerate can own two television stations in more markets and up to three stations in the largest markets like New York or Los Angeles.

More controversial was a decision to end an age-old ban on joint ownership of a newspapers and broadcast stations in the same city. The revised rule lifts all 'cross-ownership' restrictions in markets with nine or more TV stations. Smaller markets still face some limits and cross-ownership is still banned in city’s and towns with three or fewer television outlets.

And even these rule changes are expected to face court challenges. Some media companies already indicate wanting more wide spread deregulation. Meantime consumer advocates will be seeking to reverse the deregulatory trend in favor of more local control over the print and broadcast media.

Not approached in this latest round of broadcast deregulation was the subject of direct foreign ownership of U-S broadcast properties. Currently foreign entaties and governments are banned from such ownership. But over the years there has been intensive lobbying by foreign interest groups to do away with

this ban which requires an act of Congress to lift. Most annylists say its not likely to happen in the near future. (Published news reports)

**

ENFORCEMENT: LOCAL CHARGES FILED AGAINST OHIO CB OPERATOR

Complaints from a group of neighbors experiencing interference on household appliances from phones and TV sets to baby monitors have resulted in a court case against a citizens band radio operator. Amateur Radio Newsline’s David Black, KB4KCH, takes a look at a most interesting case:

--

On the CB airwaves, he's said to go by the name Sugar Bear. James A Disbennet, of Lancaster, Ohio, faces first degree misdemeanor charges of operating a CB radio exceeding 4 watts. He also faces two counts of operating a CB radio without certification. The Lancaster Eagle Gazette says Disbennet was released on bond after answering a summons in Fairfield County Municipal Court May 20th.

The Lancaster City Council was the first such group in the U-S to pass an ordinance allowing the City to enforce rules set by the FCC governing the strength of CB radios. On April 10th, an assistant superintendent of the City's Electrical, Communications and Signals Department went on a transmitter hunt. The interfering signals were traced to Disbennet's home. The City then obtained a search warrant, with Lancaster police serving the warrant the following day. Officers seized four pieces of CB radio equipment worth more than a thousand dollars.

A trial date has yet to be set. If convicted, Disbennet could be hit with a 1,000 dollar fine and 180 days in jail.
For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

According to the law under which Disbennet was charged, the definition of CB radio "includes all private, two-way, short-distance voice communications service for personal or business activities of the general public. Citizens filing complaints must keep an accurate log of the interference for a minimum of four weeks and there has to be more than one complainant in order to file charges. The only exclusions to the law are for emergency communications services like police, fire and FCC licensed radio amateurs.

The complete story is in cyberspace at http://www.lancastereaglegazette.com/news/stories/20030521/localnews/339596.html. (N6RU)

**

ENFORCEMENT: FCC WITHDRAWS LETTER IN ENHANCED SSB OPERATION

Remember a stir created on April 3rd the FCC sent advisory letters several hams who run enhanced or so-called high fidelity single sideband? The FCC told

those operating the mode that the agency had received complaints from other radio amateurs alleging that the enhanced mode transmissions were using bandwidth wider than necessary. The FCC termed this as being contrary to good engineering practice.

One of those hams receiving such a notice was Anthony G. Latin, W4NSG, of Ocala Florida. Now, a month later the FCC has withdrawn its original letter to Latin, stating that it was issued to him in error. The regulatory agency also apologized to W4NSG for whatever inconvenience that letter may have caused him. No specific reason for the withdrawal of the letter was given. (FCC)

**

ENFORCEMENT: FCC ISSUES ANOTHER ENHANCED SSB WARNING

But its not over yet. This is because the FCC has issued another ham a similar warning regarding the use of enhanced SSB on the Amateur Service bands.

The May 12th letter went to Tyler Stampfli, KA0KA. Like those issued back in April, it tells the La Grange, North Carolina ham that use of enhanced Single Sideband emission with a bandwidth wider than necessary is contrary to good engineering practice. It also notes that no spectrum in the Amateur Service is designated specifically as “wideband audio” frequencies, either by Commission rule or in any informal band plans.

The FCC did not cite Stampfli. It did however request that he fully review the relevant Amateur Service rules and to make certain his station conforms to them. Also that he operate in the best interests of the Amateur Radio Service as a whole. (FCC)

**

ENFORCEMENT: BIG CELLULAR FINE

The FCC has issued Western Wireless Corporation and WWC Holdings two Notices of Apparent Liability to Monetary Forfeiture in the amount of $200,000 each. The companies are the licensee of Cellular Radio Station KNKN343 in North Dakota. The FCC says that the the companies are operating radio transmitting equipment from an unauthorized location resulting in the first fine.

The second $200,000 is the result of what the FCC says was Western Wireless for operating radio transmitting equipment from another unauthorized location. The two NAL’s wewre issued on May 5th and the companies were given the customary time to appeal.

More is on the web at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-109A1.doc and
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-234290A1.doc (FCC)

**

HAM RADIO AND THE LAW: CA HAM FILES FOR COURT COSTS

Mark Abrams, WA6DPB, the ham who recently triumphed over the city of Rancho Palos Verdes California in an antenna zoning case is headed back to court. In

an e-mail to Amateur Radio Newsline, Abrams says that his attorneys have recently completed our briefing in the 9th Circuit Court of Appeals on the issue of damages. Abrams says that he is now waiting for a court date which he expects will be around the end of August or early September. After the hearing, Abrams says that he expects to wait another 60 days for a written decision from the Court. If the Court decides in his favor he wins the right to have another trial on the amount of attorney's fees, court costs and damages. If he looses Abrams says that it will be unlikely that he will take the matter of reimbursement for his legal fees any further. (WA6DPB)

CHANGING OF THE GUARD: FRANK SCHWAB, W8OK, - S.K.

Some sad news to report. The changing of the guard in ham radio continues. This with word that Frank Schwab, W8OK, has passed away.

As we reported last week, Schwab, who helped to craft the Dayton Hamvention over a half century ago suffered a heart attack a few hours prior to this years event. At the time, the 77 year old Schwab was also fighting cancer and several other ailments.

While best known for his work in creating the Hamvention, W8OK was also a world-class D-X’er and heavily involved in public service activities. Services were held Monday June 2nd at St. Christopher's Church in Vandalia, Ohio. A page long tribute to Schwab appeared recently in the Dayton Daily News. (W8ILC)

**

TIME TO RETIRE: WISCONSIN SCHOOL CLUB GOING QRT

After over 25 years in operation, Andrew Martin, KB9ZLL, reports over qrz.com website that the Fond du Lac, Wisconsin High School's ham radio club is dissolving. This, due to the retirement of it's trustee Jeffry Hoeft, K9NC.

The club had its beginnings in the old high school building in 1972. Back then it consisted of a wire antenna and CW transciver. Today the group has operations on the high frequency bands as well as two meters and 440 Mhz. More important, the Fond du Lac club has been responcible for the licensing of nearly two dozen new hams over the years it has operated. (KB9ZKK, QRZ.COM)

**

NET NEWS: NEW ECHOLINK VHF CONFERENCE

Ron Pastterson, W6FM, reports the creation of a new conference on Echolink devoted to the discussion of all aspects of VHF and UHF weak signal operating. The name of the on-line gathering is *VHF_TALK* and it was created to assist in coordinating skeds, discussing band openings and anything else related to operations in the world above 50 Mhz.

For those who aren't familiar, Echolink is a voice over I P system available to licensed amateurs. For more information on it and the new conference take your web browser over to www.echolink.org. Ron adds that the conference will hopefully soon be avail over the world wide Internet Repeater linking Project as well. Information on IRLP is in cyberspace at www.irlp.net . (VHF Reflector)

**

ON THE WEB: AMATEUR REPEATER BUILDERS HOME PAGE GOES QRT

The Amateur Repeater Builders Home Page appears to have gone QRT and its owner is blaming the attitudes of some hams for its demise. In a posting to the website, its administrator says in part that due to an unfortunate series of events resulting from this groups actions the Amateur Repeater Builders Page page will no longer be maintained.

Whats involved appears to be a dispute over universal recognition and acceptance of the the Northern California Amateur Radio band plan and what the board administrator terms as intentional interference to coordinated 420 links with an ATV transmitter. He says that the FCC's lack of time and/or interest in addressing the issue has caused him to become thoroughly disgusted and that he is -- quote -- ‘Gone fishing!’

But all might not be lost. Kevin Custer, W3KKC, says that he plans to contact the Amateur Repeater Builders Home Page owner to try to obtain the rights to the website and host it himself. He says he will let everyone know what happens over the Yahoogroups based Repeater Owners remailer. (W3KKC, VHF Reflector)

ON THE AIR: COOKEN IN JUNE

Turning to on-the-air operations, the Central Ohio Operators Klub Extra - Novice is sponsoring special event station WW8OH June 21st 1200 to 2000 UTC. This, to coincide with the Ohio Department of Natural Resources Cranberry Bog open house.

Look for WW8OH in the General portion of the 40m band and QSL as directed on the airr. More inforrmation is at www.cooken.org and the word Klub is spelled with a “K.” (E-mail)

**

DX

In D-X, word that a group of five Greek operators will sign SX9G from Gavdos Island through the 15th of June. QSL via SV2DGH. (GB2RS)

**

THAT FINAL ITEM: THE OWLS ARE BACK

And finally this week, its time to get ready to T-Hunt down those ever elusive Burrowing Owls. And this year there’s another creature to look for -- bats. Heres Joe Moell, K0OV, with all the details:

--

For five years, ham operators and scanner listeners in western states have monitored VHF frequencies to help researchers in Saskatchewan and Washington state study the migratory behavior of Western Burrowing Owls, a species of concern. Now three more monitoring projects are beginning, and this time we need volunteers in south-central and southeastern states.

A biologist at the University of South Florida at Tampa (USF) is studying Florida Burrowing Owls. That's a slightly different subspecies from the Western Burrowing Owl. It is thought that their range is limited to Florida and the Keys, but there is one 40-year-old report of a sighting in North Carolina. Researchers have banded the legs of these birds in the past, but none of the banded owls have been recovered after leaving their Florida homes.

For the new study, some Florida Burrowing Owl chicks are being radio-tagged right now. Local researchers are tracking them as they leave their nests, learning to forage. In the summer, the young owls are expected to take off for parts unknown. USF wants volunteers throughout the southeast to listen for the VHF radio tags in an attempt to determine their routes and final destinations.

That's project #1. Number two involves Mexican Long-nosed Bats. For about a month beginning in mid-June, Bat Conservation International wants volunteers to join a team that will track their movements in and around Big Bend National Park in Texas as they pollinate century cactus plants. Physically fit hikers are especially wanted, but a few vehicle-based monitors will also be helpful. And there may be opportunities for some home monitors. Hams with VHF radio direction finding equipment are particularly needed.

Project #3 is a study of orphaned Great Horned Owls. It's being done by the Heard Natural Science Museum and Wildlife Sanctuary in McKinney, Texas, along with the University of North Texas. After being raised at the sanctuary, up to two dozen of these owls will be released into the wild this summer, with radio tags attached to help determine their dispersal patterns and survival rates. Volunteers are needed to monitor for the radio tags, especially in the Denton and Collin County areas. Great Horned Owls are territorial and do not migrate long distances.

My Web site on radio direction finding carries the latest details, frequencies, and contact information for all three projects. Point your browser to www.homingin.com HomingIn is one word --- homingin.com

Thanks in advance for your help! From southern California, where Burrowing Owls are diminishing but still can be seen in the farmlands, this is Joe Moell, Kay-zero-oscar-victor, for Amateur Radio Newsline.

--

Again, that website is www.homingin.com. (K0OV, ARNewsline™)

Of the total number of licensees there are only so many who actually
get on the air. Spreading them out over currently underutilized ham
allocations would have a dilution effect which would make all our high
bands sitting ducks, exactly the opposite result you expect.

> And selling 27MHz

The threat is very real and based on the changes I've seen in my years
on the bands I suggest that you get comfortable with the prospect of
losing spectrum space above 30 mHz.

> and non-traditional methods (not just sitting at a desk), many would chose to
> learn something.

I'm certain that many "would chose" to learn something. Many
universities are, in reality, private educational companies. They
charge much more money that state-owned colleges. They pick and choose
who their students will be. They all offer credit for their courses.

> >Sorry, Vipul, you didn't really "show" anything. You merely led us

Who the hell takes a camping course?

>
> Also, they tried to cover many <unrelated> topics. It is better to do a small
> focus skill well, than just introduce to many areas and not do any of them
> well.

Yeah, a few hours of practical, hand-on training on zipping and
unzipping the sleeping bag would have proved infinitely more practical.

> I did not learn anything. I still don't remember those knots.

Blame yourself. Maybe you're just not a good student.

> Just a month ago, I went on a camping DXpedition with a random group of Hams.
> It was not expensive and I learned alot more.

The fat, old guys taught you something, huh?

> There was a real purpose and theme of the whole event. The theme of the event
> was operating and contesting on several radio modes. It had a definite sequence
> of activities, from setup of antennas to takedown.

My day is filled with not just one but quite a number of sequenced
activities. Is this sequenced activities thing new to you?

> That's the difference between worthless skills and worthwhile experiences.

That's valueable information coming from a guy like you.

> >> I need to find quality homeschooling.
> >
> >Might I suggest looking in someone else's home?
>
> It takes a village...

...and in the village, you'll find a school. Let your children go there
and interact with other children. They'll be much better for it.

> >I guess your kids will come up short when it comes time to enter a
> >university. They likely will not be accepted.
>
> No, not at all. I've heard of another (not me) that made the case that they
> could learn something and that person was allowed to take a year off and make
> up the grade later.

I'm not talking about making up grades, I'm talking about not being
admitted because they'll have not met the standards for entrance. Go
back and read what you wrote.

> That person got accepted into a <great> college.

Not without meeting the standards of admission.

> Okay, the person still had to make up the class. But, the point is there are
> still ways to fit the useful courses in. I will have to look at homeschool,
> charter school, making up grades (like that person did), and other options.

The options are: 1) meet the standards and be accepted to a university or 2) skip college and find work.

> Also, if there is a need, I will hire a lawyer.

Save your money. Hire a tutor.

I can recite Shakespeare. So what? I know morse code. So what?
Mike wasn't asking whether you could fix a flat. Vipul seems to be the
one in need of an automechanics course which teaches the changing of a
flat tire.

Done anything in the last half century?

keeping it. :-)

Quite a number of things are tested for which were tested for a half
century ago.

Why is any of this a concern for you? You aren't involved.

You're joking, right?

Quotes randomly culled from GoogleGroups:

"I say this because many of the pro-code-test proponents have indicated
that they support Morse Code testing because it helps to overcome many
of the limiations of the current VE/question-pool testing arrangement."

" Most pro-coders would like to see the code examinations beefed up as well"

"And the ARRL should continue to do so." (in reply to a comment that the
ARRL supports morse code testing.)

"All I have seen is a bunch of no-code Hams who use 2 meters like the CB
band."

CW in emergencies....

" I don't think it's right that someone might not live through an ordeal
just because the 'ham' didn't understand what was being sent."

On keeping the riff-raff out of the ARS as being only one reason to keep
code:

"The most important of which is preserving code as an alternate and
potentially vital communicatons capability."

"it keeps the HF bands relatively uncrowded, for the simple reason
that code requirements filter out a LOT of people who otherwise would buy
a radio and start yakking."

"I worked my buns off to pass the test so I could
enjoy the privileges, and I am dead set against giving the spectrum away
to people whose only qualification is the price of a radio and the
ability to win at guess-the-answers."

"Such as" the existence of this debate. The "no-code" VHF licensing
has created the expectation that "no-code" HF licensing will soon
follow as some sort of logical inevitability. It's the fervent wish of all
who want to pick up a microphone and engage in the powerful, ego-
intensive rush of instant gratification they can get from projecting their
voice louder and farther than anyone else. In so doing, they create
an enormous amount of chaos on the bands, since those attracted
mainly by voice operation usually become frustrated by their inability
to truly dominate in that sphere. We've already seen this on VHF,
where a continuing influx of No-code Techs get on a local repeater,
find that they don't have anything interesting to discuss, and therefore,
nobody wants to talk to them. Therefore, they become convinced that
if only they could get on HF, ham radio would suddenly be more
fulfilling to their needs. The no-coders don't give a whit about
furthering the "technical state of the art" or making any other
valuable "contributions," although they've become quite adept at
using this as a justification for their position. This newsgroup, and the
no-code supporters on it, are living proof of my statment quoted above.

"But it is still used as a filter, while it is not perfect, it does work
better than anything else that has been thought up."

"> A big factor in the no-code side is "class envy." These underachievers
simply
> resent the fact that so many people are able to meet the requirements for
an
> Extra-class license and they, for whatever reasons, either can't or wont."

Hhhmmm...dropping the code leads to anarchy?

"So for just a minute, let's just go ahead and unilaterally drop the code
because we don't like it. Then some other group doesn't like the laws by
which
THEY are governed and they force the government to ignore the laws THEY are
constrained by...THAT, Mark, is ANARCHY."

Well, enough of that.

Uh, not true. The Part 15.239 rule specifies a maximum field strength
measured 3 meters from the device, and the testing regimen requires
testing at all possible angles of emission.

Furthermore, it is not permissible to remove the antenna from a Part 15
device and install a different antenna. This is controlled by requiring
the antenna to either be permanently attached, or to use a special type
of antenna connector that is not availble at RadioShack (or so the FCC
tesing lab engineer will tell you). This is why you can buy reverse SMA
connectors from Digikey, for example.

Now, there is not much that they can do about you mounting a Part 15
device (including its 6 inch rod antenna) at the focus of a 12 foot
diameter satellite dish...

It is an amateur HF set of frequencies or channels and would, it seems,
possibly allow techs to be given permission to operate. The FCC
would have to make a rule change to do that. Does anyone know if a tech
is allowed to operate on the speial 7mhz channel in Alaska?

> What was the FCC reasoning for the allocation?

To allow amateurs to operate there. The ARRL had petitioned for
a band. The FCC gave 5 discrete frequencies instead and specified
USB mode only.

> Will five channel enable a significate amount increase
> communications to make this worth the effort?

Depends on how you define worthwhile.
Will this aleviate any "crowding" on other HF bands? Not
at all. Does this provide a unique and beneficial set
of designated emergency channels? Yes, and that should
prove worthwhile if for no other reason.

Cheers,
Bill K2UNK

It should be be moot, but I would not bet on it until its sign and sealed.
The requirement been on international life-support for a least ten years.

But my question to Phil Kane was, since it not an ITU amateur alllocation,
could the FCC allow Techs to operate. The band is already being used
as an uppper SSB band by person without CW proficiency.

The FCC already is allowing citizens without licenses to operate below 30
mhz on
40 channels using upper and lower side band, and AM modes.

In other word, is the code requirement a band requirement or licensee
requirement?
Why would a person need CW proficiency to use a band the bars the use of CW?

Larry

I've considered the making of a beam for FRS that slips over the
antenna. Three elements, the fixed "stub" being the driver.

Tall building...point and shoot!!!
